# DEXTER

Washing in Tub No. 1

Wringing From Tub No. 1 to Tub No. 2

Wringing From Washer to Blue Rinse

From Blue Rinse to Basket (Two Tubs—Full Washing)

THE washing principle of the DEXTER DOUBLE TUB is *right*. And the women who have to do heavy weekly washings recognize this. They know before you tell them that running the clothes through two washers instead of one insures the perfect cleansing of the most badly soiled garments. They know, too, that two washers going at once do the washing just twice as fast. They are glad to be done forever with the tedious soaking, boiling and hand rubbing. They are easily sold DEXTERS because their own good judgment tells them that a DEXTER will do their washing the quickest, the easiest, the most thorough way. The sturdy construction, the many convenient features, the assured long life of the DEXTER in service keep them sold—bring you additional customers.

**The *Dexter Double Tub* is equipped with heavy duty electric motor with a wide margin of power even with both tubs and wringer operating at once. Also for use with gasoline engine. Write for catalog and exclusive *Dexter* agency proposition.**

This statement carried by the Saturday Evening Post, Literary Digest, Popular Science Monthly, Scientific American, Popular Mechanics, and 29 leading farm papers regularly to approximately 8,000,000 homes. This message is a new power behind your sale of saws.

The day of the "toy" saw—the cheap "tinny" blade is past. Every man is somewhat of a mechanic. He should have tools. He likes to repair the fence, or build a new coal bin. He will get better results and more satisfaction out of the work if he has good tools to work with.

Carpenters have found by experience that the Disston is the best Saw. That is why most carpenters use Disston Saws. That every home needs this same saw is what Disston advertising is telling the people all over the country every day.

Make this true slogan one of your selling arguments. Talk it today. Keep talking it. And we will put the Saw Most Carpenters Use—the Disston—in Every Home.

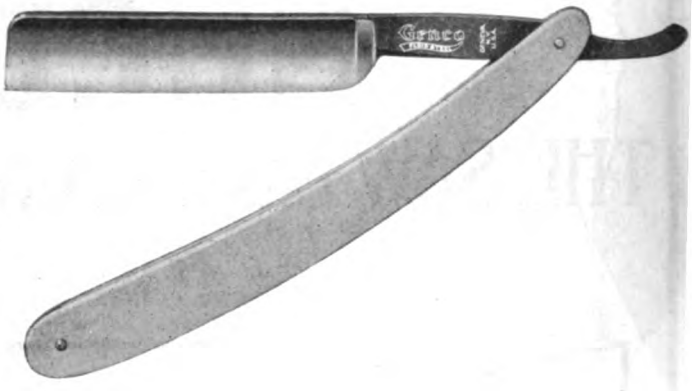
# Genco RAZORS



## Two Genco Favorites

**GOLD SEAL**

Ground full concave, blade finely polished, back and tang heavily GOLD PLATED. Transparent amber handle.

The beautiful combination of blade with gold plated back and tang and transparent amber handle, produces a handsome razor in the Gold Seal.

**FLUID STEEL**

Ground full concave, blade finely polished, back and tang finished dark GUN METAL by our anti-rust process. Handle imitation ivory. Contrast between an ivory white handle and dark gun metal back and tang, makes the Fluid Steel unusually attractive.

When your customer buys a razor that shaves him smoothly and comfortably again and again—one with an edge that can be tuned up for each shave by a few strokes on a good strop—he is thoroughly pleased with his purchase.

Genco Razors are guaranteed to please men in just that way. Your men customers are familiar with the guarantee:

**"GENCO RAZORS MUST MAKE GOOD OR WE WILL"**

They see it continually in Genco advertising appearing in the Saturday Evening Post and a list of other National Publications.

Add to this guarantee of quality the splendid appearance of the Genco Gold Seal and Genco Fluid Steel styles, and you will know just why so many of these two popular Genco Razors are being sold.

Most Jobbers Carry Genco Razors in stock. If yours do not, write us.

## Your Friends for Life

MILLERS FALLS Bit Brace No. 732 is several tools in one. With it you cap drive screws, countersink and ream as well as bore holes. Its ratchet, patented chuck and 'feel' in the hands have made it "the carpenter's favorite."

A MAN who owns fine tools is never lonesome. He enjoys a companionship with them that grows through the years.

Many a good workman would actually feel the loss of a thumb less than if he had to part forever with the prized contents of his tool chest.

This attachment is easy to explain. By doing work that hands cannot do, fine tools become a part of a man's creative self.

Millers Falls Tools are fine tools. For fifty years they have been making life-long friends of people who do things with their hands. Carpenters, craftsmen, repair men, mechanics—all swear by Millers Falls Tools, and so do the leading hardware men of America who sell them.

Amateurs often buy cheap tools. That's why they are amateurs. It takes a real expert to do a good job with poor tools.

But whether amateur or expert—select Millers Falls Tools. They will be your friends for life.

MILLERS FALLS COMPANY
MILLERS FALLS, MASS.

MILLERS FALLS TOOLS

*"You're No Stranger"*

**Insert shows half page advertisement from the May 29th issue *SATURDAY EVENING POST***

Digitized by Google

# "You're No Stranger!"

—is what this new customer is saying to the drill being shown him. He recognizes it as a reliable old friend from Millers Falls. Its brother tools from boxes, vises, and more—all have served him well. Like a friendly face in a strange land, the sight of this Millers Falls tool gives him confidence in the dealer's knowledge of good hardware.

Millers Falls tools are friendly tools. Their strength, sureness, ease of operation, make them real partners with skilled workmen.

This is the message of a campaign of national advertising for Millers Falls Tools appearing every four weeks in the Saturday Evening Post. Thousands of men, who like to work with their hands, will learn of this line of tools. If your store is Millers Falls headquarters, it will be their source of supply for many items of house and garage hardware as well.

Let Millers Falls Tools make friends for *you*.

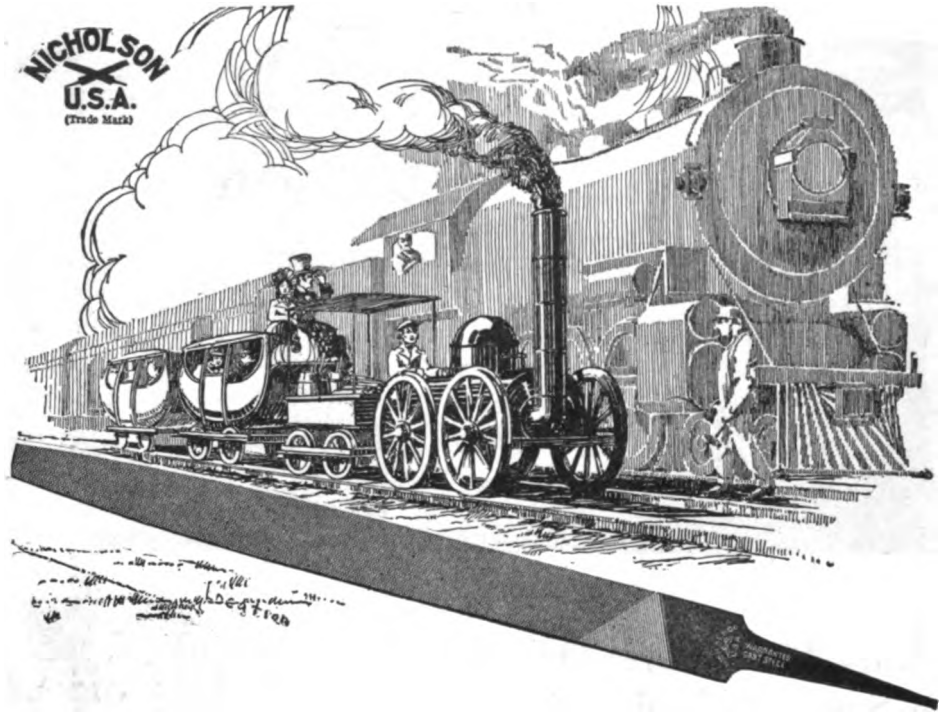
# How Many Holes are Drilled in a Sewing Machine?

Merely look at the arm, the bed plate, the face plate, and the stand of a sewing machine and count the number of drill holes in them.

This will increase your appreciation of the twist drill's importance in helping to fashion the utilities which contribute to the comforts of your daily life. Also, it will emphasize how Detroit Twist Drills serve you by serving those who build these utilities.



And in the sewing machine industry, too, Detroit Twist Drills are used because they give more accurate holes with less regrinding and less cost for power.

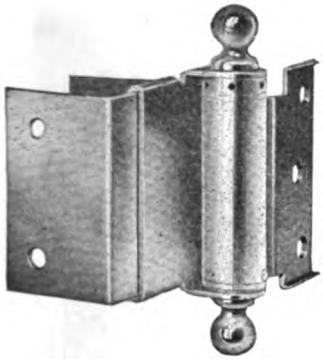
# Mechanical Progress

Today's mogul of the rails placed beside the first practical locomotive fitly portrays the romance of human progress in the shaping of metals to essentials needs. Populations have grown, reached out into virgin forest and plain, consolidated their gains and pushed steadily out and onward, irresistible in strength of engines, moulded, machined, filed fit for service.

## NICHOLSON FILES

first offered to industrial America in 1861, served in their infancy to fashion the locomotives that hauled the first transcontinental trains over the Pacific Railway in 1869. And ever since, their uses and users have multiplied until now there are over 6000 kinds of ready-sharp, uniform quality NICHOLSON FILES, used and preferred everywhere.



Write for our catalog and for File Filosophy—a most instructive booklet about files and their uses.

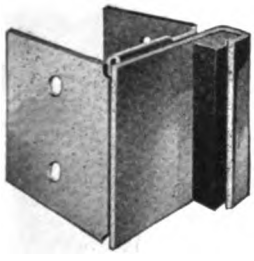
# Lawson Hinges are Adaptable to All Standard Constructions

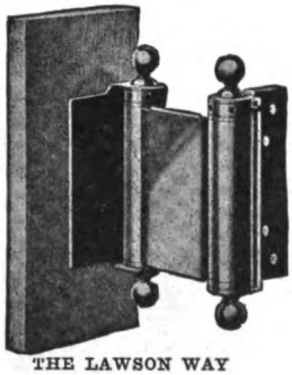
NEW 1800 HINGE



Architects and builders alike are enthusiastic in their endorsement of the new Lawson standard three-inch spring jamb hinges with adjustable bracket for use in place of the old style four inch hinge and blank for lavatory work.

These three-inch hinges, having an adjustment range from 1⅛" to 1½", are adaptable to any construction and not only give a more snappy spring action, but make a better looking job.

Lawson Nu Jamb Spring Hinges save at least $1.50 on each application because no hanging strip is required. They fasten directly to the jamb, giving the door far more solid support and can be more easily and quickly applied.



THE OLD WAY

No. 1800
ADJUSTABLE STRIKE

The new Lawson No. 800 Surface Floor Spring Hinge has already proved itself superior to any similar hinge. With the roller bearing at the top where it should be to carry the weight, this hinge has a smooth and snappy spring action at all times.

THE LAWSON WAY

We also make Lawson surface floor spring hinges and a complete line of lavatory hardware, including bolts, strikes, locks and keepers.

# ATKINS SILVER STEEL SAWS

## The Chemical Analysis

In the making of crucible steel, it sometimes happens that there is what are known as "off ingots"—the mixture not being correct. However, with our modern laboratory equipment we have the facilities for detecting any variation from the Atkins standard of "Silver Steel." We subject each plate to minute chemical analysis and physical inspection.

Our metallurgists know what constitutes the "Silver Steel" formula, and there is no deviation from it, hence you can depend upon Atkins Saws, because they are uniform in quality and efficient to the highest degree.

PIONEERS IN THE HARD-EDGE, FLEXIBLE-BACK BLADE

# "50-50"

**"In reviewing our past pleasant business relations I look back with a great deal of pleasure to our connections with you, as yours is one of our real 50-50 accounts which we value very highly."**

(Name on request)

Exactly what you want to know about any manufacturer whose product you are expecting to handle. Not only that the product is good, and that the price is right—but that the Manufacturer himself is right, that the whole Organization is right, and agreeable to do business with—that the manufacturer's dealings with his jobbers and thru them to the consumer, are right—his sales policy, etc.

That is why this letter coming from a well known Napier Hack Saw Distributor appeals. It tells something that you can never estimate or guess at. It gives you information on a point that you can only learn by experience. Because when a jobber in these "trying times to jobbers" says that Napier "is one of our real 50-50 accounts which I value very highly" it means something of interest to every distributor handling or expecting to handle Hack Saw Blades. This point is even more important than the fact that the Napier Saw Works have behind them a generation of manufacturing experience building good Hack Saws. It is more important than the fact that these blades are used or specified exclusively by most of the largest industrial plants of the country. It is even more important than your knowledge that a big demand exists, nationally and internationally, for Napier "Quality" and "Expert" Blades.

**Practically speaking, it is the reason why we decided recently to drop the manufacture of Band Machines, Band Saws (and a few other products we made in the past in addition to Hack Saws)—to enable us to concentrate entirely and without restraint on the building and marketing of "Quality" and "Expert" Hack Saws. "Quality" and "Expert" are worth it. We have found the business big enough to occupy our exclusive attention. And now that we have the long-sought opportunity, we aim to extend, as we have already started in to extend, the Napier 50-50 proposition on Hack Saw Blades where formerly it had been impossible for us to do this.**

**This, then, is the time for every dealer who wants a good Hack Saw account to get in touch with us. We are ready to answer your inquiries.**

# GOODELL-PRATT

## 1500 GOOD TOOLS

# A Message From Mr. Punch

Day-by-day dividends of positive satisfaction are collected by dealers who handle the Goodell-Pratt Toolsmith line.

The dealer who begins with a few of the more than 2000 different tools listed in the big Toolsmith Catalog, soon looks carefully to see what other Goodell-Pratt tools his customers can use.

Toolsmith Dealer satisfaction is made up of several important factors.

Goodell-Pratt means the right tool to buy among a large proportion of mechanics, house owners and people who look after their own cars. The Toolsmith's message is sent out constantly to every section of the country through the strongest advertising mediums.

Then, too, these attractive tools, assisted by effective window and counter displays, make excellent salesmen by themselves.

In service, Goodell-Pratt tools quickly win the owner's confidence and concentrate his buying habits on this one complete line.

Toolsmith Dealers, in addition, invariably receive prompt, courteous and efficient service from the manufacturer.

# Make Winter Customers Out of Summer Buyers

WHILE the Sargent Noiseless Screen Door Closer sells most rapidly at this season, remember that it is an all-year-round line: On any light door, inside or out, it operates perfectly. A summer sale for screen door use should bring you winter business.

Throw out lines for future orders when making a sale. For booths, storm doors, lavatories or any light door that ought to be kept closed, it gives complete satisfaction, just as it does on screen doors. For heavy doors recommend the larger models.

A Sargent Screen Door Closer is right in size, energy, and appearance. It closes the door rapidly and firmly, without jar or rebound.

The Sargent Screen Door Closer is being pushed in the popular magazines. This is bound to make sales easier. A striking display will also help.

# THE HONOR OF THE ACCO FAMILY

Weed Chains for Motor Cars!

Anchor Chains for Ships!

Chains for Railroads!

Devices that make travel safe on land and sea, that can be absolutely depended upon to protect human life, are typical of the nature and quality of Acco products.

The workers who make up the Acco family know they are doing more than making commodities merely to be sold.

They know that it is their work that holds millions of motor cars and trucks to slippery roads.

It is their work which enables mighty ships to ride safely at anchor, whether in harbor or helpless on a lee shore.

It is their work which makes possible the safe operation of thousands of railroad trains.

This gives the work of the Acco family honorable and distinctive responsibility which is reflected in every link of every Acco product—"From Plumbers' Safety Chain to Ships' Anchor Chain."

In the Acco family, loyalty to the work itself is rated above everything.

This is true of every worker whether the job is directing all of the numerous plants, or operating a 2,000,000 pound tester, or a typewriter.

The honor of the Acco family is in the hands of each member of it, even to the youngest worker.

These are the reasons why it is possible to say not only that "Every Weed is Guaranteed" but that every link in every chain made by the American Chain Company will hold for the purpose intended.

*The big ACCO Line includes chains for every purpose—from Plumbers' Safety Chain to Ships' Anchor Chain—all Styles, Sizes and Finishes.*

# Six "Best Sellers"

Anything that increases sales and cuts the cost of doing business, is worth looking into, isn't it?

That's what this Pexto Snips Display does.

It boosts sales by putting a choice assortment of this century-old line where your customers can't miss them. With it you'll sell snips to customers who hadn't thought about buying them or had forgotten they needed them.

It lowers costs by reducing the time and labor of making sales. No rummaging around in drawers to find the snips you want to show. No fussing with catalogs to make sure of numbers, sizes and prices.

All the information you or your clerks will need is right on the back of the display, classified so as to be read at a glance. Stand it up or hang it up, use it in the window or on the counter. It shows the six "best sellers" of the complete line of twenty-five.

## TOOLS FOR USE ABOUT THE HOME AND FARM FOR THE MECHANIC IN EVERY TRADE

Digitized by Google

## Wherever You *go* You will see *Hinges*—McKINNEY HINGES

STOP and look about you. Count the hinges within view. Whether you are at home, in your office, in a factory or on the farm you can see them—sometimes by the dozens, sometimes by the hundreds and in big buildings by the thousands. Everyone uses Hinges *everywhere!*

Hinge making is important. Hinge usefulness is universal. The McKinney Manufacturing Company at Pittsburgh, Pennsylvania, realized this when they designed their first hinge fifty years ago. It set a standard for the millions that have followed since. Today the name McKinney is a mark of unexcelled usefulness, design and durability.

When planning for building or repairs, don't overlook a proper selection of hinges. Remember hinges make doors possible. McKinney Hinges—better doors!

You can get McKinney Hinges and Butts to match any architectural design. They combine artistic taste with practical every day usefulness. With them doors respond quickly and quietly. There is never a sag—never a squeak. From Milady's jewel box cover to the huge Industrial gate, each McKinney Hinge and Butt serves its purpose well. There is a size to fill every hinge need perfectly—and without interruption.

You will find at least one store in your locality selling the McKinney line. That dealer is proud his store *is* McKinney Headquarters.

So when you go to buy remember the name McKinney. See that it appears on the hinges or butts you buy.

McKinney Service will be your reward!

*Also manufacturers of McKinney garage and farm building door-hardware, furniture hardware and McKinney One-Man Trucks. These McKinney One-Man Trucks eliminate the need of extra helpers and cut trucking costs in half.*

McKINNEY
*Hinges and Butts*

McKINNEY MANUFACTURING COMPANY, Pittsburgh. Western Office, Chicago. Export Representation

*This is the sixth advertisement in the big McKinney National Campaign. It appears in the June 12th issue of The Literary Digest and the May 29th issue of The Saturday Evening Post. In these two powerful publications it will reach more than 9,000,000 readers. At the same time other full page advertisements appear in the Architects' and Builders' Magazines. These impress the big class of hinge buyers with the importance of using standard hinges and butts—those stamped with the name "McKinney." Make this advertising work for you. Talk McKinney!*

# *The Big Season—*

This is an important time of the year for hinge selling. New buildings are in progress—almost ready to swing into active use. The question of hinges is a timely one. So is the McKinney Advertisement reproduced above.

McKinney Hinges and Butts have been on the market for fifty years. They are the standards. A big National Advertising Campaign has impressed this fact upon the nation. Be sure you are ready to talk McKinney to your customers.

# SERVICE to NAILS

*The Eclipse Nail Bin*

## —Therefore, Service to You

THE ECLIPSE NAIL BIN saves energy, worry and expense.

It properly indexes and stores nails of all sizes, and keeps them always handy.

It renders them accessible at times when your salesmen are rushing to give immediate service to customers, and prevents their hands from becoming painfully cut or scratched.

The ECLIPSE NAIL BIN occupies less floor space than any other method; its actual dimensions, with five sections of five bins apiece, measures 48 inches in diameter by 60 inches in height. All bins and cases are steel, sectional, revolving, ball bearing.

How does your cumbersome wooden bin compare with this?

Ask your jobber for prices and sizes, or write to us direct.

## Our Friends Have Kindly Said

"We figure that your Patented Steel Revolving devices save us several miles of walking every month, and that they increase very materially our sales of screws, nails, bolts, etc."

From Fort Smith, Arkansas

"We have nothing but praise for you and your Patent Steel Nail Bin. We would not take twice what we paid for ours. It is very handy, and as we are cramped for room, it means a big saving to us."

From a New Jersey Hardware Firm.

# Ideal Poultry and Rabbit Fence

## Is a Fence and Not a Netting

The horizontal wires in the Ideal Fence make it possible to stretch it perfectly, and FEWER POSTS ARE NEEDED and NO TOP OR BOTTOM RAIL. Posts may be set a rod apart, and if the fence is well stretched it will be strong and effective.

Hexagon mesh poultry netting is good and has many uses, but it cannot be stretched without pulling together in the middle, hence top and bottom rails are necessary and the posts must be close together.

Like all fences the heavier the wire the longer it will last, so we recommend the heavier styles; but for many purposes, like protecting a young orchard or vineyard where a cheap fence is good enough, the No. 20 will do the work effectively and is less expensive when erected than any other fence or netting with the same size of mesh.

For permanent poultry yards the heavier styles are better and cheaper, life of fence considered.

In all weights and styles the horizontal wires are two inches apart. The size of mesh is governed by the spacing of the mesh wires. Every style has a cabled selvage both top and bottom.

Build for Bigger Better Business with TONCAN METAL Lasting. Economical. Satisfactory-USERS KNOW

# Many Leading Architects are Consistent Users of

TONCAN METAL

Years ago when Toncan was a new product, makers and users believed that Toncan Metal would prove much superior in lasting qualities to ordinary metal sheets—Today they know.

A flood of evidence—individual tests and comparisons and long, hard service have told the story.

Today the superior lasting qualities of Toncan Metal are unquestioned—Users of the earlier years are insisting on Toncan Metal for their sheet metal work of today.

Today many of our best buildings in all parts of the country have sheet metal work of Toncan —specified by the architect. Today many, many sheet metal men are recommending and using Toncan wherever possible, because they know it will make a better—more lasting job.

Are you testing Toncan? We welcome comparative tests. Are you using Toncan? Then you, as well as other users, know it lasts. Write for full information.

ANY of the different styles of "Cannon Ball" hangers can be used on any "Cannon Ball" track—and any combination of the different styles of "Cannon Ball" track may be used with any "Cannon Ball" hanger. This means that you can always answer a customer's needs as long as you have any "Cannon Ball" track and hangers in stock. In addition you have the advantages of being able to feature special combinations in the regular styles for barns and similar buildings, and a number of door sets for garages. Write and ask for the STAR barn book and catalog.

# Make Your Windows Pay Full Rent

PUT your windows to work—make 'em pay their keep in full measure. Merchandise well displayed is merchandise half sold. Among the many dealer helps we offer merchants selling Quick-Lite Lamps and Lanterns is a series of attractive, easy-to-read window cards. These are 7x14 inches, printed in four colors on handsome cards, with easel backs. They stand alone in the window or on the counter—wherever you decide to use them. Just the right size to attract attention of window shoppers and pull business.

## Coleman Quick-Lite Lamps and Lanterns

—are sold by 20,000 progressive merchants covering every state in the Union. More than 400 Jobbers are now distributing this quick selling line. These window cards tie-up in splendid fashion with the Quick-Lite advertising now appearing regularly in the best magazines and farm papers read by your customers.

They are helps that will materially increase your sales of Quick-Lite Lamps and Lanterns. Take full advantage of them—send now for your set, directing your letter to the Dealer Cooperation Department of the Coleman office located nearest to you.

# A Strong Wire Staple --and a Felt Washer

**---Little Things, Yet As Here Applied They Lengthen Life And Increase Usefulness Of Collar Pads**

Pat. in U.S. Dec. 1, 1914
Pat. in Canada Apr. 6, 1915

## New Patented Hook Attachment

A strong wire staple reinforced by felt washer firmly grips hook to body of pad even though cover has been weakened by sweat and long usage. This lengthens life of pad. It is the greatest improvement since we invented the hook. ***Used on all our Hook Pads and only on pads made by us.***

## Stuffed Collar Pads

are the best safeguard against shoulders of horse being chafed, galled and bruised by collar. They excel the unstuffed kinds which lack the soft, pliable, cushion-like and absorbent features possessed by pads containing our specially prepared composite stuffing.

## Low in Price---Long Lasting---Well Advertised

Our sixth campaign of advertising direct to users, through the medium of leading agricultural publications, is on a more extensive scale this year than any previous one. This serves to further the interest of dealers and jobbers.

**Dealers are requested to write us for a supply of new books concerning care of horses and containing many valuable emergency horse remedies. Every horse owner will want a copy. Sent Free upon request.**

# GIANT

Partial view of one of the Giant Plants at Giant, California.

## The oldest manufacturers

Your customers know there is a logical reason for the better and cheaper blasting results of Giant Powders. They have been improved and developed longer than any other dynamite or powder made in this country.

In 1866 the first Giant laboratory was built in the present Golden Gate Park. Today, with our chain of great plants and magazine stocks throughout the entire West, we can serve you with Giant Powders.

There is a good profit in every sale of Giant Farm Powder. Its use leads to improvements, permits the use of intensive tillage methods and develops your farm machine market. More than 3000 merchants are selling Giant Powder in constantly increasing quantities. These merchants have found that sales of Giant Farm Powders bring repeat orders. Farmers who once use them always come back for more. Dealers who have been selling only the ordinary dynamites find that their sales increase rapidly as soon as they stock the Giant brands.

Write for information regarding the ways in which we help Giant dealers to sell more Powder.

# For You—
## the hardware dealer and his clerk

STARRETT TOOLS

STARRETT HACK SAWS CUT QUICKER LAST LONGER

## THE TOOLS MECHANICS BUY

Is the title of a booklet that will help hardware men sell Starrett Tools. "Give me a surface gage," says the machinist. If he knows exactly the gage he wants—all right. But—

There are five kinds of Starrett surface gages. Take, for instance, No. 57 and No. 257. They look alike. Both are excellent tools. But if that mechanic needs a surface gage as a locomotive guide liner No. 57 will be almost useless to him. It's up to you to find him the right gage.

Talking points on Starrett Micrometers; the fine points of Vernier Calipers; Height and Depth Gages and Test Indicators; points about Starrett Surface Gages, Rules, Tapes, Gages and Starrett Transits and Levels; all these and more are covered in this book.

"The Tools Mechanics Buy" is a readable little book; full of pointers about building trade through Starrett Tools by assuring satisfaction to the men who buy them. No matter how well you know your stock, "The Tools Mechanics Buy" will interest you. Ask us today for as many copies as you have clerks—and don't forget to get one for yourself. Sent free upon request.

# Silverware Draws Women to Your Store

High grade Flatware, carefully kept and suitably and attractively displayed, will do more perhaps than any other agency to take your store out of the for-men-buyers-only class.

Do you realize just how desirable feminine patronage is? Have you done what you can to get it?

Don't tuck away a few sets of Knives and Forks in a dark corner and expect a searching party to dig them up. Give the ware a prominent place, keep it in condition, handle it as silverware, not as nails; make special displays of it. It will impress the woman shopper to know you handle the Flatware that matches the Hollowware she has seen illustrated in our advertising.

Write our Advertising Department for advertising and display helps.

The Rid-Jid folds up compactly — as neat as a knife. It fits nicely behind the kitchen door or tucks

YOU ought to see the way the new and improved Rid-Jid Ironing Table is selling. Nearly every woman who sees it wants one. It is just the last word in one of the most needed improvements about housework.

The Rid-Jid has combined every feature that appeals to a woman: It is light weight (the lightest folding table made); can be carried to any room; folds neatly and compactly and can be stored behind doors or in closets. It is as steady as a rock when open; does not wabble, creep nor sway when ironing. The truss construction — same as a bridge —makes it strong and steady. The open end adds convenience and time saving. Every joint is protected by metal plates. The Rid-Jid lasts a life-time.

That's why it sells. It hasn't any real competition because it is alone in efficiency. Women are quick to see these advantages when you point them out. They buy—are tremendously satisfied — **and sell their friends.**

That means big money for you. Hundreds of other dealers are eagerly grasping this opportunity. Let us tell you more about it. Write us today.

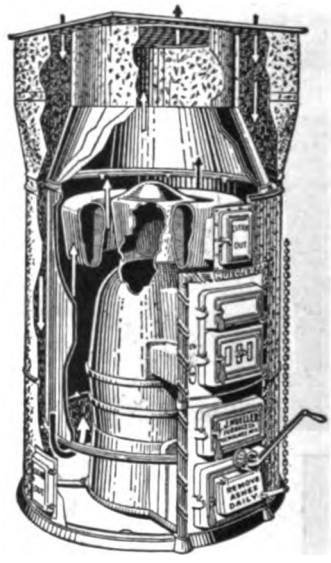
# MUELLER



## *The "Big 3"*

## *PIPELESS FURNACE*

## Breaking All Sales Records

Mueller Merchants are piling up bigger profits than ever this year. Fuel hard to get and prices rocketing make people think. The Mueller Pipeless is solving the heating problem for thousands of home owners.

You can look your best customer straight in the eye and sell him the Mueller. You will be giving him the biggest value his money can buy—can assure him real heating comfort and a saving of one-third to one-half on fuel.

You can back this assurance with the signed Mueller guarantee to heat every room in his house to a comfortable temperature.

You are selling a certainty when you sell the Mueller. A furnace that is designed right, built right and which works right. The three big exclusive construction features of the Mueller, the "Big 3," have established its success.

There is a big opportunity in your community to sell the Mueller—a big demand by which you can profit. Mueller national advertising is constantly creating this demand and Mueller result-getting dealer co-operation will help you cash in on it.

***Write today for our proposition and sales plan for dealers***

# Early Orders Insure Delivery

THE meager supply of goods in the merchant's warehouses, the curtailment of production through strikes, the large unfilled tonnage on the books of manufacturers, the refusal of many mills to accept any new business offered and the allocation by the large corporations of but small percentages of former purchases for the first half of the year to jobbing customers, coupled with numerous freight embargoes which the railroads are forced, through labor troubles and car shortages, to put into effect, has brought about an acute scarcity of many lines of merchandise.

WE see no possibility of immediate relief from these conditions and we urge all of our customers to cover their Fall requirements by placing orders early.

WE do not suggest over-buying or speculating, but feel it is an opportune time to place your orders freely for your Fall requirements at present prices.

# BASE BALL GOODS

As the base ball season is now in full swing, dealers should see to it that their stock is complete. We are making a specialty of **Hillerich** Bats, **Goldsmith** Balls, Gloves, Masks, etc. Goldsmith Official League Ball is **guaranteed for eighteen innings.**

**No. 250**

Weather seasoned and bone rubbed. Made of the choicest very old weather seasoned timber, hand turned. Has bone-rubbed finish, which closes the pores of the wood and gives a hard hitting surface. Can be supplied in assorted autograph models as follows: Ty Cobb, Davis, Jake Daubert, Ellis, Rogers, Babe Ruth, Ryan and Sisler.

**No. 97**

**No. 97**

The original and only eighteen-inning guaranteed league ball recognized, adopted and used by professional leagues playing under the national agreement rules, which is official for all games in recognized base ball. Conforms to the requirements and specifications of the National and American leagues, and is official for use in any game played in organized base ball. The finest pure wool yarn, rubber center and specially tanned horse-hide, combined with hand stitching and scientific manufacture, enables us to guarantee it for eighteen innings against ripping, softening, losing its shape or elasticity. No other ball will be closer to official specifications or is as uniform in construction. Each ball wrapped in tissue paper and tinfoil, packed in a separate box, and sealed according to official league regulations.

**Model CM**

**Model CM**

Designed and used by "Chief Meyers," former famous New York catcher. Moulded, scoop shape, of selected tan, waterproofed cowhide. Stitched with extra heavy waxed linen thread. The pad is of special construction, consisting of layers of absorbent felt on a foundation of flexible cowhide. This pad will stand heavy pounding with little wear. The patented (October 24, 1916) Goldsmith Finger Grips and the patented wrist protector prevent turning and slipping. Light in weight and easily handled. Full laced edge, with rawhide lacing. A mitt combining correct design with superior material and workmanship.

**Model B**

**Model B**

A Walter Johnson Model. An exceptionally large glove, made for the player who wants a large and easy fitting glove. Made of the finest glove tanned horsehide. Very soft and pliable. Leather lined throughout, with welted seams. Correctly padded and ready broke for immediate use. Laced wrist permits the padding to be adjusted as desired.

**No. 261**

**No. 261**

# *It Has the Famous Mirro Features*

ONE of a distinguished and long-lived family is this handsome Mirro Aluminum Tea Kettle. Its sturdiness, its graceful design, its rich and gleaming finish: all are marked *Mirro* characteristics.

It is the sturdiness that makes Mirro remarkable for its resistance to hard wear; it is the design and finish that make Mirro conspicuous for its beauty.

But even more pronouncedly *Mirro* are the features of convenience that make this Tea Kettle a joy to use. Note them well. You do not find them in ordinary kitchen ware:

(1) Highly ebonized, sure-grip, detachable handle. ☆(2) Handle ears are welded on—an exclusive Mirro feature. (3) Spout also welded on—no loosening—no dirt-catching joint.

(4) Slotted ears permit handle to be shifted to any desired position without coming in contact with sides of kettle. ☆(5) Rivetless, no-burn, ebonized knob—another exclusive Mirro feature.

(6) Quick-filling, easy-pouring spout. (7) Unusually wide base—quick heating and fuel saving. Also prevents flame from creeping up around sides.

(8) Famous Mirro finish. ☆(9) The famous Mirro trade-mark, stamped into the bottom of every utensil, and your guarantee of excellence throughout.

Back of the Mirro guarantee is the world's foremost manufacturer of aluminum ware.

Mirro is sold everywhere at the better stores, at truly moderate prices.

## TAP WRENCHES

No. 1251 Length 13 in. Over All

No. 250

*Right and Left Hand and Rigid*

**THREE SIZES**

No. 250 Capacity up to 3/16 in. Taps
No. 251 " " " 5/16 " "
No. 1251 Same as 251 with long shank

Yankee Tap Wrenches are especially adapted for work in close quarters and places out of reach. The cross arm is easily drawn to one side and with the ratchet movement, holes are readily tapped in close corners. The No. 1251 is 13 inches overall, giving a long reach into inaccessible places, making it indispensable in Automobile work and work of similar character.

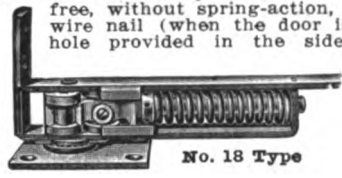
ONLY

# BOMMER

DOUBLE ACTING
SPRING BUTT HINGES



have the weight supporting bearings correctly located to liberate the action of the springs, reducing breakage and increasing spring power, preventing unequal wear of the barrels, and giving practically unlimited durability.

**Bommer Floor Surface Spring Hinge**

**Has Release and Holdback Features, Ball Bearing and Alignment Device**

The most durable hinge of its type; holds the door open when swung to 90 degrees. The spring-action can be entirely released so door will swing free, without spring-action, by inserting a wire nail (when the door is open) into a hole provided in the side plates. The spring-action can be restored by withdrawing the nail.

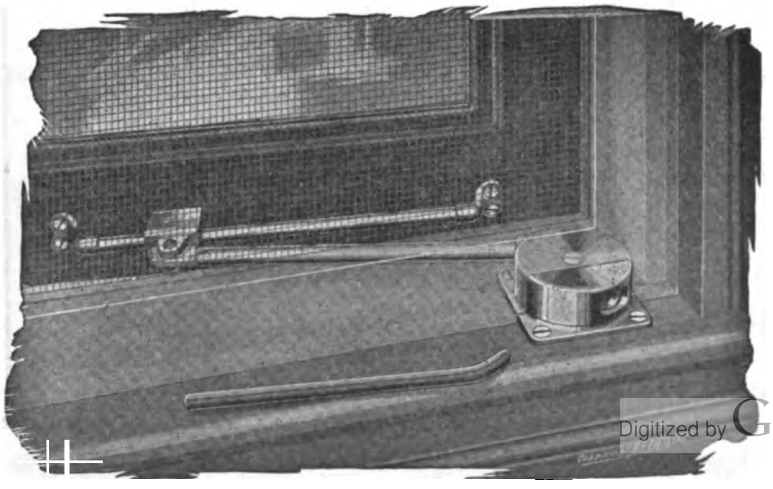
"Highest Award (Medal of Honor) for FILES and RASPS, Panama-Pacific International Exposition, San Francisco."

# "Forstner" Brace and Machine Bits

**For Fine Carpenter, Cabinet and Pattern Work**

**SPECIALLY ADAPTED FOR HARDWOOD WORKING**



The Foster Labor Saving Auger Bit, unlike other bits, is guided by its Circular Rim instead of its center; consequently it will bore any arc of a circle and can be guided in any direction regardless of grain or knots, leaving a true polished surface. It is preferable and more expeditious than chisel, gouge, scroll-saw, or lathe tool combined, for core-boxes, fine and delicate patterns, veneers, screen work, scalloping, fancy scroll twist columns, newels, ribbon moulding and mortising, etc.

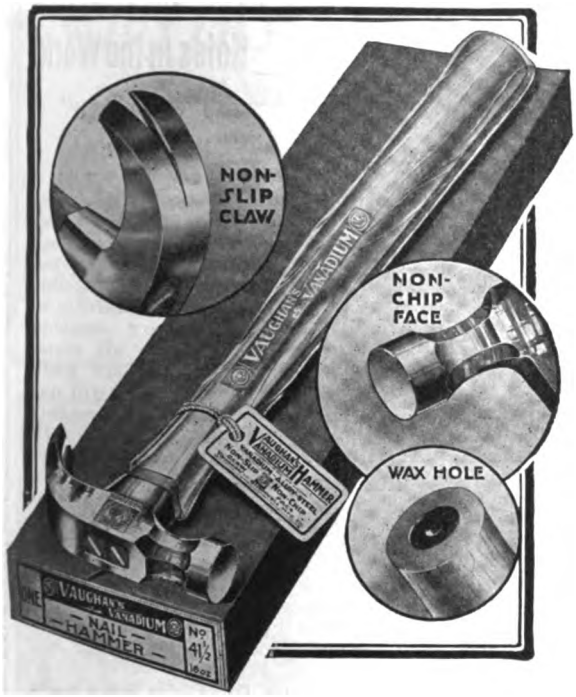
**Manufactured by THE PROGRESSIVE MFG. CO., Dept. "A," Torrington, Conn.**

Enquire of Your Hardware Jobbers, or Write Us Direct. Supplied in Sets Write for Catalogue

# Superior Casement Adjuster

**For windows that open out**
**Operates without disturbing the screen**

**Superior Casement Adjuster** is the most convenient to operate because all that is required to unlock and move the window is to simply move the handle; when you let go the handle the window is locked automatically.



**Superior Casement Adjuster** is the strongest because it locks on the rod fastened to the window and thus combines the strength of the two rods.

**Superior Casement Adjuster** holds the window firmly at any angle and does not allow the window to rattle.

# The Only Screw Holes in the World

## The "Hole" Problem

The advantages of Screw Holes are: they can be used without damage to receiving material; they enable you to Standardize to wood or machine screws in all materials; they are made of brass and will not rust under atmospheric or moisture conditions; special tools are not needed for using them in any material; they can be used in any place a screw can be used; no special screws are needed—these Screw Holes fit any wood screw or machine screw now in stock; they make the neatest possible job in any material; they are endorsed by all dealers in screws, and by all users of screws; in spite of the high cost of brass, Screw Holes are yet cheap; they make everlasting holes in any material, and anyone who can drive a nail can use them.

You must stock Screw Holes, for your trade demands them.

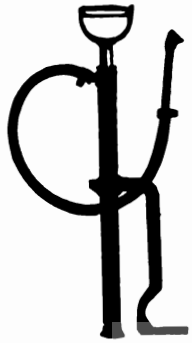
# NOVELTY FORCE PUMPS

And treat your customers to the best

No. 130

We are the manufacturers of the original 'Novelty' Pump for WELLS and CISTERNS. Its patented handle attachment renders it the most durable, easiest working and best fitted pump.



Its imitations are far inferior, because they are not as accurately constructed and do not produce as large a volume of water with each stroke.

Don't delay—write for circular and special prices at once!

**THE HESS-SNYDER CO., Massillon, Ohio**

# The Utility Bucket Pump No. 95

Was designed to meet the demands for a small powerful double-acting spray pump. It is very efficient for domestic purposes. Pump is of all brass construction with two bronze ball check valves and hemp packed plunger. Equipped with our No. 80 Angle Service Nozzle, which is designed to give a fine mist.

By removing the variable disc a straight stream can be had for washing windows, autos, etc. Whitewashing can be done successfully with this pump.

# *A Good Rope—*
# *Seaport Manila*

Trade Mark

MOST so-called Hardware grades of Manila Rope omit the word "Manila," manufacturers well knowing that this particular grade is composed largely of colored Sisal fiber. The appellation of "Hardware Rope" has been misused and abused. It is unfair to a fraternity having a higher sense of quality in rope than any other class because larger distributors.

SEAPORT MANILA is 100% Abaca Fiber. A good rope, well made and quoted at as low a price as any Pure Manila Rope can be consistently offered. Has no equal in anything in a second grade on the market and a trial will be convincing. It is a departure in rope manufacture that will be appreciated by dealers and consumers where a less expensive Pure Manila Rope is wanted.

# Peters Cartridges

THE announcement by the United States Revolver Association of the winners of the Outdoor Pistol and Revolver Championships, again points to the leadership of Peters' Cartridges.

The World's Record, by Dr. Snook, a record by a wide margin, and the excellent scores made by T. K. Lee are added to the evidence of former years and demonstrate the genuine quality of Peters Semi-Smokeless Cartridges, which have for years been used by many winners of the U. S. R. A. and N. R. A. matches.

Users of the (P) Brand Won Three Out of Four of the 1919 Outdoor Championships of the United States Revolver Association.

Match "A" (Revolver Championship of America), T. K. Lee, Birmingham, Ala., 463x500.

Match "B" (Pistol Championship of America), T. K. Lee, Birmingham, Ala., 472x500.

Match "C" (Individual Military Championship of America), Dr. J. H. Snook, Columbus, Ohio, 651x750. World's Record.

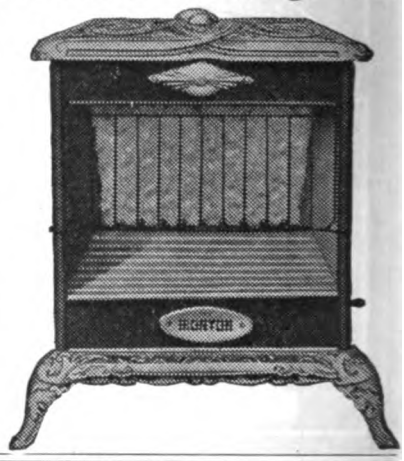
## Ironton Bunsen Burner Heaters



A few of the special features in Ironton Heaters: The Bunsen Burner—the air mixer—the circulation of cold air from the floor—the admixture and secondary combustion. These and many other distinctive features constitute the superiority of the **Ironton,** and will bring many new customers to your store.

Irontons produce more heat per foot of gas consumed than any other heater in the market. They burn the gas clean, odorless and free from soot and poisonous gases. No blackened walls or ceilings. A trial always convinces the customer of the superiority of Ironton Heaters, and helps you to sell others.

**Ironton Heaters** are made in 68 different styles and sizes—a size and style suited to every requirement, and to every pocket-book.

ALUMINUM

MADE IN OHIO, U. S. A.

# ALUMINUM "Real Solid"

## ANNOUNCEMENT

The "REAL SOLID" LINE has been for 20 years, the Strong, well known, dependable Aluminum line of Kitchen Utensils.

Our Policy is and has been to give the dealer goods of such quality that assures him not only his PROFIT, but the housewife's continued patronage. We have now added

### A New Line of

## "REAL SOLID WARE"

This is a Heavy Drawn line STAMPED from heavy tempered Sheets, which is far superior, in many ways, especially in Rigidness and Durability.

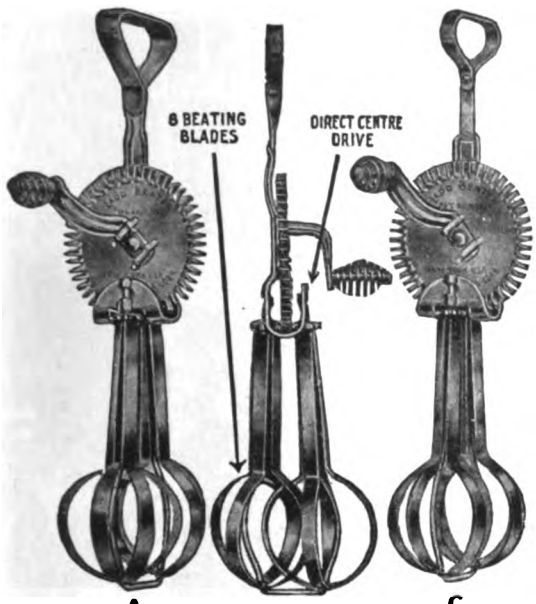
We have eliminated unnecessary expense of CAST ALUMINUM HANDLES, etc., and are Putting MORE METAL into the BODY of our UTENSILS.

TRIMMINGS—Tinned Iron, using Double Coated Tinned Iron—The best on the market.

PROTECTED HANDLES—All Coffee and Tea Pots with handles, both curved and straight—bottom of handle is protected with Metal Trimmings, so that it will be impossible for flames to creep up over bottom and burn off handle.

OUTSIDE FINISH—The Same HIGH CLASS polish as heretofore.

INSIDE FINISH—Scratch Finish Superior because it does not show finger prints from handling or dirt, which may accumulate while on dealers' Shelves.



**We have added 25 New Items, all practical. This makes the "REAL SOLID" Line the most complete on the market**

Write Today and get our New Catalog just off the Press.

# SAFETY INTERLOCKING STOVE AND FURNACE PIPES

Fire Preventing

Home Protecting

Ambrose P. McGuirk's Patent

Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are very necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the receding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe.
Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.
Send for Price List and Descriptive Statement.

# Protection

## *The best you can sell*

IN every field the name of some one product always stands forth, establishing a standard of quality by which all others are measured. In the fire-arms field that name is COLT.

For more than eighty years that has been so. In the uncertain hazards arising from the unrest of a congested city—in isolated country—amid the dangers of peace and the conflict of war—COLT protection is the best you can sell. COLT stands for the uttermost perfection in fire arms.

Just as a man owes it to his home to provide the best protection that money can buy, so do you owe it to yourself and the reputation of your house to give them the best you can sell—a COLT Automatic Pistol or COLT Revolver.

# What's In a Name

Enough—plenty — SUCCESS in the RIGHT ONE properly applied. It's half the game, naturally, you don't get a good one with poor merchandise, unprincipled methods nor disregard for rendering distinctive and valuable service. Establish a meritorious name, it compares with a solidly laid rail system that has demonstrated "delivered" ability, preciseness and certainty, when the charges are fair the public uses the road over and over again, even if the cars are changed in color, the conductor's uniform from blue to gray or electricity replacing steam.

"Good Morning" (It's me they're talking about)

Evidence galore, Brunswick Balke (Pool Table Mfgrs.) undeniable success producing talking machines and automobile tires. Do you think the name helped any?

Heinz put over 57 and more varieties. We contend first one was hardest, name helped others along materially.

Chandler Motor Car Company identified with Cleveland Motor Car Company. Chandler a success, Cleveland unknown, BUT, public had sufficient confidence in connection that 25,000 Cleveland cars sold before one was shown.

Think of it. Standard Oil put over mild laxative (Nujol), really there is a contrast between Kerosene Stove (Perfection) and body lubricant.

"WHERE DO I COME IN?" asks the above member of the Gem Brush family. HERE AND NOW.

"On and above the fact that GEM BRUSHES possess one hundred cents of utility for every dollar expended, pay legitimate wholesome profits to everyone handling them and guaranteed throughout, comes the burning truth that the name G-E-M, connected with shaving things particularly, spells SUCCESS from every stand-point necessary and essential. GEM BRUSHES represent new car developed with all knowledge possessed up to 1920 and now placed on that solid Gem System, which is BUYING POWER, they will ride forth with confidence of our trade to reach all points which is ULTIMATE CONSUMER via stations called DEALERS, through the transfer points called JOBBERS. Ring the bell and go ahead, you have the goods.

We all went to the top with Gem Razors and Blades because they are chocked full of quality, usefulness and results, they survived and succeeded because GEM exceeded everything in its class, stepped into another one of its own, very true, that is going to continue, also prevail in GEM BRUSHES.

Their name is 50 per cent at least of their selling power. If we put lake water in bottle labeled Gem Hair Remover, large quantities would be sold, but, eventually get knocked off the market; nevertheless, we'd sell a lot of it. GEM BRUSHES not only will sell on account of name, but, be backed up in use with real quality and service.

GEM BRUSHES will be advertised in magazines and through other channels all year around.

Don't lose sight of the fact that GEM BRUSHES are in a class alone, GEM BRUSHES are manufactured to sell no cheaper than good brushes can be produced.

GEM BRUSHES is all knowledge of Brush Manufacturing experts thrown together, divided with essential factors and the results GEM BRUSHES.

(Signed) THE GEM SAFETY RAZOR CORPORATION.

# New Ladd's Discount Book No. 3

A new and enlarged edition of this standard work, comprising the most comprehensive collection of discounts ever printed, as well as many other valuable computations for commercial purposes, is now ready, after months of preparation by the compiler and editor, William J. Ladd.

Is one of the greatest time and labor-saving productions of the age. The net of any amount at any discount can be obtained in a second. The calculations have all been carefully checked. No proving is necessary. It is invaluable for pricing and checking invoices, figuring inventory, making prices, figuring profit, etc. Note the equivalent discounts. Are they worth anything to you?

It contains more than 300,000 Computations including New Discounts and Combinations which have come into use within the last few years. Nearly 600 pages, all double indexed.

# A Business Man For President?

AT last it appears the American people are to have the opportunity of voting for a business man for president.

This is being written before the national Democratic convention is held at San Francisco, but if the Democratic party is mindful of the wishes of the people to nominate a clean and upright business man instead of a self-seeking "politician," the voters of the country will have the opportunity of choosing between the two.

On the surface, it does appear as if the Republican party at Chicago gave heed to the desires of the entire country, that they realized the nation was tired of having lawyers, politicians, theorists, professors or doctrinaires selected to run the greatest business on earth—the United States Government—recognizing the cry that the time has come to call a halt and change their methods of conducting the government. True, each party has radicals to deal with. If everything is not done to satisfy the loud-mouthed radical, he instantly condemns his opponent, imputing to him all the sins of the decalogue, and denouncing him as a "reactionary" because he doesn't subscribe to radical beliefs.

Whenever you hear it said that such a candidate is "reactionary," you can trace it back as emanating from some envious and disappointed politician who thus hopes to deceive well-meaning people through such insinuations.

It was demonstrated at Chicago that the radicals in the Republican party constitute a very small element, as was indicated by the nomination of Senator Harding and Governor Coolidge—men whose private life and character, as well as their public careers, will stand the closest scrutiny, who are of that staunch, plain, sensible American type, who believe in enforcing the law, upholding the constitution, and the extermination of treason and disloyalty, under whatever name or whatever guise it may appear.

It is to be hoped that the Democratic party will nominate men of the same caliber as Senator Harding and Governor Coolidge, and will not permit the radical element to gain the ascendency.

It is recognized by every thoughtful, true American that the next president, be who he may, will face a great and trying ordeal.

There has been a reign of defiance of law and order, disloyalty and treason. Be it said with shame, there are those in public office who have secretly encour-

Digitized by Google

aged this criminal element, even to the extent of pleading for their pardon; or again turning loose convicted criminals after they have been ordered deported. Thus it will need the united support of Americans regardless of party to uphold the new American president.

This country is too big for any one man to attempt to dominate it. It needs the combined wisdom and judgment of a strong cabinet of the best minds that can be gathered together, men with a real understanding of conditions, whose aim and motive must be to protect and foster American principles and American institutions.

We need men in office who are content to serve the American people, to consider their welfare first and above everything else, and in so doing we can then be ready and able to help every righteous cause throughout the world.

Harding and Coolidge are business men. They know through practical experience the problems both of the American working man and the American employer.

They are not unmindful of their early struggles as working men, and they have no false ideas as to what is necessary for true success. Their sympathies and help will go out to those who need help and the spirit of fair play will be the governing factor in their relations with the American people.

Let us hope that by the time these lines are in the hands of our readers the Democratic party will also nominate men of the same stamp. If so, the country is to be congratulated. The voters will have the opportunity of choosing between the finest type of American citizenship. Surely the times require men of this stamp. We cannot afford to have any other kind.

---

Of what avail is it for Congress to enact legislation to punish and deport convicted criminals and murderers as long as it is left to the Secretary of Labor and his assistants to pass final judgment and set aside the verdict and again turn them loose to continue their criminal careers?

The reports made to the Congressional Investigating Committee show that more than 1000, who have been arrested and found guilty, have been turned loose by the Department of Labor.

Americans must be more watchful than ever in condemning the soviet, socialistic propaganda that appears to have the active support of many of our officials, and they are not in minor or obscure positions, either.

---

The Socialist party seeks to camouflage its activities and lull the country into a belief that they are opposed to violence and direct action, that they only seek to secure their aims by "social revolution," by peaceable methods—nevertheless they unanimously choose as their candidate a convicted criminal, whose open defiance of law and order and treasonable methods entitles him to serve ten years in prison.

But perhaps the Socialist party, knowing of their friends in court, have been assured of a pardon in time for their candidate to take an active part in the campaign.

Stranger things have happened in this country the last few years.

---

## TAMPERING WITH NATURE

The weather man's notion of the day-light saving is matched by that of the pious old lady who "hopes the government won't begin to fuss with the time," as she wants her clock to run "just as the Lord intended it should."

This is on a par with some of the "orthodoxy" taught by certain preachers, who object to any scientific investigation or study of a future existence, for example, raising the objection that if the Lord had intended us to know it would have been "revealed" by him ages ago.

We ought to be thankful that in the world of business and invention there is not such great stupidity, else we should have never had the telephone, the steam engine, the wireless, electricity and many persent day conveniences.

But even these inventions have had to fight their way against preconceived notions and prejudice, and so every new thought or investigation in the mental realm must contend against the egotism of ignoramuses.

# Failure of the Railroad Strike Has Not Changed Fundamental Conditions

WE believe that it was not intended that this strike should win nor that the next railroad strike shall win, although the next one will be probably far more serious than this one. We believe the definite plan of those who are forcing these strikes is by their failure to create a spirit of enmity, hoping thereby to develop such bitter hatred in the hearts of laboring men as to make them ready to join the forces which are seeking to overturn and destroy the Government. If two or three more strikes are called on railroads, as will probably be the case, and the men grow bitter as they are defeated, carrying out in this respect, although unknown to the men, the definite plan of the Bolshevistic leaders, there will be developed a widespread class hatred against which the country needs to be warned.

### Strikes Called for Purpose of Developing Spirit of Anarchy

We must prepare now to meet all of the difficulties which we shall certainly face when new strikes are called and railroad transportation is again halted. These strikes will mean higher cost of foodstuffs, higher cost of material of all kinds, hundreds of thousands of people thrown out of employment and a halting of all the business activities of the nation.

It is easily conceivable that two or three strikes of this kind, each practically called off through the instigation of leaders, will result in widespread unrest and almost anarchy.

This is the situation which the nation must face, and we must be prepared to meet every strike and to enact such legislation as will make strikes in public service corporations almost an impossibility. There should be no more right on the part of public service employes to strike and bring chaos to the entire public than there should be the right on the part of soldiers to strike. The man who enters a public service corporation does so of his own volition. He becomes a public servant almost as much as a soldier or policeman. A strike on the part of any of these classes should be prevented by law, and law rigidly enforced. Men who enter public service employment do so voluntarily, and they enter it with a distinct responsibility toward the public. When they fail in that responsibility by seeking to block transportation and to starve people, they commit a crime as great as that of a soldier who deserts the army which he has sworn to help maintain.

Preparedness to meet the emergencies of individual and national life can alone save from destruction or at least from great losses which might have been prevented by preparedness. The nation must be prepared to meet every issue which is raised when public service employes undertake to strike. No one would deny the right of any one man individually to withdraw from employment, but when he joins with other men in forming a conspiracy to bring about a general strike of all and then seeks to prevent independent men from working, he becomes a criminal and should be punished as such.

This is the issue which this country must meet, and meet very promptly and very firmly, without regard at all to the ranting demagogic politicians who are constantly seeking to mislead the country and win applause of the mob spirit, hoping thereby to maintain their political power.—Manufacturers' Record.

## USING THE TELEPHONE TO MAKE SALES

"I wonder," said a progressive Western "HARDWARE WORLD" merchant, "why business men do not make more use of the telephone as a business getter?

"We have a branch exchange in our store, because we have found that to tell a customer 'Line is busy,' is like closing the door in his face, and chances he will call up another concern next time an order is required instead of waiting till our line is free. We also know when a customer calls once or twice and is told 'Line busy' he will not call in the future.

"We have compiled a telephone list of all our customers. When a customer gives name and address to have an order sent home, we also ask for the phone number. This is for the purpose of calling the customer if the shipment goes wrong; also to secure a list of our patrons who have telephones. This list after compilation is used to announce sales and for other purposes.

**A Telephone Sale**

"The other day we held a sale of goods which were too small in quantity to advertise, so we placed one of our helpers at the telephone, and in jig time, the lot was disposed of, to say nothing of the good will created by the conversation, which was something like this:

"'Good morning, Mrs. Smith. This is Blank's store calling, Miss Jones on the telephone. Mrs. Smith, I thought you would be interested in a sale we are about to hold.' And then she described what we had. Most everyone bought, and almost everyone thanked Miss Jones for the interest she displayed in calling.

"At certain times of the year we display a telephone in the window consisting of a small switchboard (borrowed from our local telephone company) before which we place a seated figure with ear piece and order pad, over which we place a sign reading:

"'If you can't call, 'phone.'

"'This store is never closed to the telephone.'

"As an inducement to our sales force, we offer a small monthly prize to the clerk who makes the greatest number of sales over the phone. This means when a clerk has nothing pressing on hand, instead of lolling about and killing time, they phone to a few persons and sell goods in our line."

---

A weather-beaten sign and store front may indicate age, but don't think they indicate permanence, because, unless you spruce up, you will not stay long.

---

Speaking of signs, see that you don't place yours where it cannot be seen without effort. A sign should be where it cannot be missed without effort.

## HOW TO PHOTOGRAPH YOUR WINDOW DISPLAYS SUCCESSFULLY

It is but natural that merchants and window trimmers should be interested in the proper reproduction of their window displays.

The photograph is an unperishable evidence of the trimmer's skill and efforts, a record of progress in the work. You can see from time to time how you have advanced and profit by the comparison.

It is better to photograph your displays at night.

First, see that the electric lights while flooding your windows are themselves hidden from the street.

Have the illumination as even as possible, so as to avoid any deep shadows. Place a white cardboard or reflector back of the light to throw more light into any deep shadows which may appear.

Place the camera on the tripod squarely before the window. Be sure that the plate is exactly vertical. Use a non-halation plate. Roll film and film pack are the best if non-halation plates are not obtainable.

Focus your camera with wide diaphragm. Always focus to a central point, such as a window card, so that you can read it plainly. If you have a good lens fifteen to twenty minutes will be enough. The size of the diaphragm is to be considered. If cut down after focusing wide open the smaller diaphragm the more time required, but this gives an additional sharpness and detail to your picture.

People may walk between the window and the camera without injuring your picture, provided they do not stop short. As stated fifteen or twenty minutes will be about the right exposure for the average window.

Brightly illuminated windows require less time and the darker windows more.

Remember that photographical "reds" and "yellows" always photograph much darker than "greens" and "blues."

Avoid all reflections which may appear in your window caused by illuminated windows or electric signs across the street. Make an endeavor to photograph your windows when these lights are out. If this cannot be avoided, photograph your windows on a clear day before sunrise,

Develop your plate or film in a slow working contrasty developer. The metol-hydroquinone is usually the best. When printing use a contrast. A printing-out paper is preferred to the gas light variety.

You can buy any of the developing materials in practically any drug store or camera shop with full directions of how to use same.

If your photograph is for reproduction, use a black and white gloss finish paper. The larger the photograph the better can be the retouching and the better it will reproduce.

## YOUR EXPECTATIONS A FACTOR IN SUCCESS

**"To expect, to expect, is worth four hundred drachms."**

An epigram is a pointed saying—one which has a sting in its tail or a special bit of wisdom like a diamond glittering in the top of its head.

The peculiar Hebrew proverb, "To expect, to expect, is worth four hundred drachms," may be interpreted to recommend to us the great advantage of careful deliberation in all our actions, for four hundred drachms represented a considerable amount of money or value, and more people have made mistakes by acting too quickly than by getting posted and taking time enough to be thoroughly advised as to the widsom of their course.

But there is still another meaning hidden within the folds of this quaint saying. It brings us down to a modern psychological truth, that if we would be prosperous, we must think prosperity, act prosperity, and associate with those who expect larger and better things.

We are acquainted with the people who are always going to the poor house; who are mourning for fear there will be no rain, and the crops will fail; who confidently expect an epidemic which will carry off the most valued citizens of the community, and who live in the cheerful atmosphere of calamity of some kind. Usually they are not disappointed, for we are mighty apt in this world to get what we are looking for.

If we think that people will snub and slight us, we will be on the watch and our actions will breed unfriendliness and suspicion, and we will actually suffer slights and snubs. If, on the other hand, we expect to get along nicely, to be appreciated by our friends, to be prosperous in business, to own a nice home, a big car, to be able to take trips and to have the things which spell happiness to us—we should travel forward with that expectation in mind, be cheerful about it, and arrange our own plans and schedule of life accordingly.

You can never put out a fire by wringing your hands and assuring everyone that it isn't worth while trying to get water at the well for probably it is dry. Do your best and do it now.

There are a great many people who deliberately close the flood gates against the incoming tide of blessings. If we send out kindliness, cheer, optimism, hope, sunshine and the expectation of all good things to the universe, exactly the same things will flow back to us which we have given out. Like attracts like.

What are you expecting? Are you limiting your expectations, or are you standing under the stars these lovely nights, breathing in deeply and saying, "I expect great things. I shall make of myself a fine, strong character! I shall merit great things! Therefore I will get great things."

Ah, yes, "To expect, to expect, is worth four hundred drachms."

## "GNAW THE BONE WHICH IS FALLEN TO THY LOT"

A man who marries a shrew for a wife, never solves the problem by becoming tart and sour himself, or by leaving her. He only proves his own superiority when he handles the situation so well that she becomes less shrewish and the two of them are able to make a happy home and to mould out of circumstances, a better fate than had at first appeared possible.

It is equally true that the business man who finds himself in a small locality when he longs for a large one; on a side street when he covets a place on the main street; who holds fifth or sixth place in his community field when he feels capable of leadership, did circumstances permit—will never help the situation by fault-finding, by neglect of business, or by becoming sour and discouraged.

"Gnaw the bone which is fallen to thy lot." That is, make the best of every minute, every advantage, and every bit of business which comes your way, and be cheerful while doing it. Just take it for granted that your present situation is but a stepping stone to the one you desire. You may have to take several steps, but sooner or later you will get there if you do not make a misstep.

Missteps are many and various. Sometimes they are caused by an attempt at too great haste, at short cuts over the honesty or fair play route, unwise buying and foolish credit system, not keeping close account of book records, or business carelessness. You can't gnaw a bone unless you stick to your task and get the meat all off of it first, and you will find that even the bone has a good deal of gelatinous, nourishing substances in it.

Are you getting every particle of advantage out of your present situation? Have you a handicap? If you have a handicap, let it be a challenge to prove to you that you can really overcome big obstacles.

Be like the little boy who looks at the gate which towers above him, laughs and says, "I'll climb over you, old gate—see if I don't." He will make the kind of a man who will get ahead in the world; but one who sits down in the path and wails for someone to open the gate must be trained wisely or he will always be stopped by obstacles all the way along life's journey.

"Gnaw the bone which is fallen to thy lot," and the first thing you know you will find that in place of a bone as bare as the one Mother Hubbard was going to give her famous dog, you will have an honest portion of substantial worth, for it cannot be otherwise once you bend your best effort to make the most—the patient and cheerful most—of what you have and are, always expecting that life holds something better just ahead.

# Supplying Summer Needs of Your Townspeople

## Advantages of Co-Operation Among Merchants

MERCHANTS in all lines realize that co-operation is better than competition, and that what benefits one, benefits all.

One of the best mercantile campaigns inaugurated this year was that planned by all the leading retail industries of El Centro, the flourishing metropolis of the great Imperial Valley, California.

Realizing that vacation time was approaching and that the community's needs are multitudinous at this time, the merchants banded themselves into a publicity corporation, and took an entire page in the local paper to tell of what they could do in supplying the wants of the people; and establishing a mutual feeling of good will between the buyer and seller. This is the way they talked to the public:

TO THE PEOPLE OF IMPERIAL VALLEY

The Merchants of El Centro Send Greetings:

The season is at hand when it is common for all to begin to prepare for vacation, and with the coming of this period we wish to call your attention to the fact that for months we have been preparing to meet your special needs.

Local conditions are in many ways peculiar, and only those who know these conditions are prepared to meet them. Knowing what you will want in advance, we have laid in stocks of merchandise which are the admiration of all strangers who visit our city, and who marvel at its metropolitan aspect.

And yet we urge economy to the public—and it is for this very reason that we invite your attention to our window displays and stocks of merchandise—where, if you are "from Missouri," you will be "shown" the excellent values of our new and fresh stocks.

This advertisement, which was surrounded by plenty of white space, was signed by all the thirty firms participating in the campaign. Many of these of course used individual ads in addition to the general one.

But this newspaper publicity was only one part of their campaign to get into close personal touch with the farmers and ranchers, as well as the townsmen. Leaflets were printed, which were distributed in all vehicles coming to town, and these backed up the ad first run in the papers:

Fellow Citizens:

Suppose you come as a transient buyer into a strange store in a strange town. It naturally follows that the clerk who waits upon you will endeavor to get from you all he can while the getting is good.

But you have been our customers for years and will continue to be for years to come. We will be here when you return from your vacation. We want you to come back refreshed and ready for another strenuous period. This is a period for economy and we want to help you to economize. Come in and tell us your wants in the vacation line.

This was also signed by the thirty merchants, and then they went a step further and planted wooden signs along the road and driveways entering the city:

RANCHERS AND FARMERS:

Can you expect co-operation from strangers? We, the merchants of El Centro, have cast our lots with you, to be a community in which we shall be happy and prosperous. If we are to attain this condition, there must be close co-operation between all of us, and we promise you that we will do our full part for the common good.

Come to us and talk over your needs for the summer, whether you intend to stay at home or go away. Let us co-operate now, and when you again return from the mountains or the seacoast let us meet as friends and fellow workers in the building of a community where we all reside as neighbors.

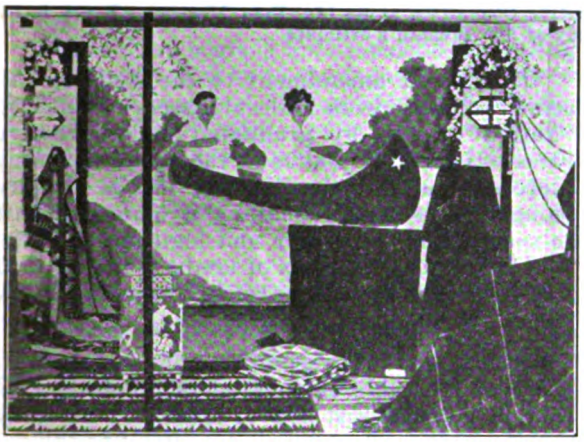
The appeal to the community spirit is especially effective in a young and growing locality, but many an older town that is "going to seed" could be revivified by an energetic appeal to local pride.

The hardware and sporting goods dealers, realizing that vacation trips were very valuable to them, were among the foremost in boosting the campaign of "Buy in El Centro." Among those who engaged in it were the Imperial Valley Hardware Co., Delta Implement Co., Edgar Bros. Co., Valley Tent and Awning Co., and Keeline Tent Mfg. Co.

Several of these firms, not content with the general publicity, took separate space in which to boost their lines. One of the catchiest of these outing supplies ads was that of the Imperial Valley Hardware Co.:

LET US HELP YOU PREPARE FOR YOUR CAMPING TRIP

You will find everything you need here in the way of camping equipment, whether you are going for a day's outing or a prolonged hunting or fishing trip.



Guns, Ammunition, Fishing Tackle, Portable Camp Stoves, Auto Kits, Cooking Utensils, Tents, Flash Lights, Auto Supplies.

They backed up their printed ads with a catchy display window, showing a scene in a desert—the floor covered with sand and cacti, and sagebrush in the background. A fire of sticks, with a red bulb in the center, occupied the foreground, and near it was an open lunch kit, while across a rock lay a gun and cartridge belt.

The Valley Tent & Awning Co. showed at either end of their window canvas tents, and between them a camp table and two stools, on

Digitized by Google

which was a deck of cards and a thermos bottle. On the floor in front was a rolled tent, upon which was perched a saucy squirrel.

**An Outing Display appeals to every member of the family, from the youngest to the oldest. Every merchant carries in stock goods that he can use, and undoubtedly improvements could be made in the above display by adding camping outfits and similar articles carried in the stock of every hardware merchant.**

All merchants realize that in a campaign such as this much depends upon individual as well as concerted effort, and that nothing pulls trade so effectively as a good window display.

For any one of group of merchants undertaking such an outing goods campaign, a window such as was recently staged by Powers, of Portland, Ore., is suggested. The background was a large lithograph, showing two young people canoeing on a beautiful lake, and at either side were tall panels of green and black hung with garlands of tiny pink roses. Oriental lanterns added to the beauty of the scene. On the floor was spread an Indian rug, and draped over racks were heavy auto blankets, with the suggestion:

"No matter how warm the day, you will find these blankets very comfortable at night when you are camping."

---

We may not all succeed in sailing into port with our masts intact and banners floating as when we set forth with the high hopes of youth, but what will really count, will be—have we carried our cargo of ideals and purposes safely, or have we dropped many of them by the way?

---

Yes, be it said to our shame, there are those in official position, who boast that "we" are willing to sacrifice human life and property if by so doing personal pride and lust for power may be enhanced. It sounds well to talk of the glorious sacrifice "we" have made and are willing to make—but notice, if you will, it is always the life and property of some one else that our professional politicians and leaders are willing to sacrifice.

## HAVE YOU OVERLOOKED THESE SUGGESTIONS?

Put on a bargain sale of kitchen ware. Suggest to the housekeeper that she discard every old, leaky basin and that she take the burned and unsightly articles for camping and cottage use, replacing these at the Housewives' Sale, which you are putting on especially for her benefit. Push fly screens. Most of the doctors have gone up in their prices and so it behooves every family to keep out the typhoid fly and all other disease-bearing insects. For those who already have screens, sell screen enamel so that the property now on hand may be protected and made attractive.

During the summer, the piazzas, porches, and steps must be frequently mopped and scrubbed. Suggest that the regular equipment be taken for this purpose and a new outfit purchased for indoor use.

If you could sell every woman in your locality a mop, you could get rid of about a carload —that would be worth while.

Quick heat stoves are the order of the day, and a housewife only buys this sort of an equipment once in five or six years. Point out that she is entitled to get a good article and one which will give satisfaction.

Grass grows very rapidly in the summer time, so a self-sharpening lawnmower will appeal. Many a man in some profession or apparently remote line of business has a hobby for fine tools.

I know a druggist who has several hundred dollars' worth, and a man milliner who has a fully equipped carpenter shop and bench.

Keep a list of these men and you will have a lot of valuable prospects.

Many an unsuspecting fire starts in waste papers. Carbon paper, which is of an oily nature, is especially dangerous and there is an abundance of this in the waste of stores and offices.

Sell these places large-sized galvanized iron, tightly covered ash cans for a temporary paper receptacle and a paper baler to take care of the surplus as fast as it accumulates. The money received for the baled paper will soon pay for the outfit.

When you go riding in your auomobile, make a list of the people who need mail boxes and see them or send them some literature on this and other matters in which they may be interested.

There is nothing like striking while the iron is hot, and selling people goods while they actually need them. They are more ready to buy if you make the appeal strong that they will benefit by the use of their purchases. They do not buy to please you, but instead of that, to add to their own conveniences or income. Stress this point.

# The Outlook For Business

(By Robert H. Treman, President The National Hardware Association)

**This statement was prepared at the request of the Executive Committee at its Mid-Year Meeting. Every hardware man will profit by a study of Mr. Treman's estimate**

THE world today is facing the most difficult financial and economic situation in history. There is constant revolt against high prices, and yet prices continue to rise at the rate of 26 per cent increase in commodity prices from April 1, 1919, to April 1, 1920. This is due fundamentally to there being too much credit and money and too few goods.

It is evident that this country cannot go on boosting wages and prices, curtailing production, attempting to enrich ourselves by non-productive speculation, without fostering further discontent and radicalism, as well as bringing on a crisis sooner or later.

The scarcity of goods in many lines and the difficulty of securing same have led to the continued bidding up of prices and to profiteering, which has been freely indulged in; the insistent demand for articles which in the last analysis are not necessary for immediate needs, and to produce these absorbs too large a proportion of labor and also, generally speaking, relatively higher wages are paid in these lines; the breaking down, at least in part, of our railroad transportation facilities, retarding the free movement of commodities, with the consequent liquidation of credit therefrom, all contribute to make more serious our present situation.

Since the beginning of the year there has been an increase in monetary stringency, and the present demand for credit is greater than at any time in a half-century, except during the prevalence of financial crises.

In addition to the great domestic demand there is much capital of American firms tied up in credits connected with the export trade.

### Increased Demand for Credit

The increase in bank loans from April 1, 1919, to April 1, 1920, has been approximately 25 per cent, the greatest increase ever known in our history for a like period.

In the nineteen months of war the expansion of national bank loans was 16 per cent, or about 10½ per cent per year.

Money rates have been advanced all over the world, the rates in England being now as high as they have ever reached in one hundred years.

The loan expansion of the Federal Reserve Banks during the past year has been on the part of the New York Reserve Bank about 15 per cent, and on the part of the other eleven Federal Reserve Banks about 40 per cent, resulting in the decrease of Federal Bank reserves to about 43 per cent from 52 per cent last year.

Individual banks report demands for loans constantly increasing to finance business on the present high prices, and as the supply of credit diminishes the rates increase.

The recent amendment to the Federal Reserve Act empowers Federal Reserve Banks to "ration" credit by graduated or progressive rates to individual banks as their loan demands increase, and in some districts this is already being exercised, thus making it more difficult to secure even necessary and legitimate credit.

Increasing high rates of credit is the natural and automatic movement to correct money evils.

### Time for Sound Operating

There must be a recognition of the fact that, however desirable on general principles a still further increase just now of trade and industry may be, this must accommodate itself to the actual facilities for capital and credit, or else be prepared to meet a more serious situation later.

The situation clearly demands the effort on the part of the bankers, manufacturers and distributors to co-operate in every way to keep conditions sound.

Consideration should now be given to the fact that we are now entering upon a period of credit requirements for planting and harvesting of crops, which demand will constantly increase until the fall months.

Every effort should be made to assist in stimulating necessary production, especially of food products, as the government report issued this week shows the condition of the wheat crop to be about 34 per cent less than last year's crop, or, in other words, some 300,000,000 bushels less than that crop.

Bad weather has delayed planting in many sections, and there is an increasing shortage of farm labor; should the country experience a bad crop year it would only accentuate the present uncertain situation.

The adverse conditions which now seem to be developing emphasize the necessity for conservatism in the handling of business and in the demands for credit.

### Contribute to Economic Relief

Large stocks at the present level of prices are undoubtedly an element of danger. Commitments as to the long future may prove unwise. Conditions as they develop should be carefully watched and studied. There should be cooperation on the part of individuals and corporations in an effort to hold the situation in check.

The time is ripe for everyone to make personal sacrifices for the general economic good. The disinclination to do this so far is one of the disturbing signs, but it behooves every patriotic business man to realize the seriousness of the situation and to cooperate to the fullest extent in an effort to consume less, especially of luxuries, to encourage a greater production of food

Digitized by Google

products, to avoid speculation of all kinds, which ties up credit now needed for the development of our export trade as well as the domestic needs.

While there is much apprehension prevailing at the present time as to the future, it is evident that the necessary deflation of prices and the lessening of the credit tension can be much facilitated by a full realization of existing conditions, coupled with sane and proper efforts to control the situation so that confidence shall be maintained.

## AMERICAN CUTLERY MADE IN GERMANY

Attention has been directed by various trade organizations throughout the world to the fact that German manufacturers are making pocket knives and cutlery and stamping them as made in other countries. They know buyers would not handle German made cutlery and hence they resort to stamping their goods as made in neutral countries.

The National Union of Manufacturers of England have sent out the following notice:

"'Englich Cutlery,' 'Made in Sheffield.'

"These descriptions on two pocket knives of German manufacturers are the latest examples of how far the Germans are prepared to go in order to deceive the world's markets.

"One of the knives was purchased at Courtrai, in Belgium, and the other in Holland. It will be noticed that the German manufacturers spell the word English with a 'c.'

"'This is a case of sheer, deliberate deception on the part of the Germans,' said Mr. Cheeseman, secretary of the National Union of Manufacturers, 'and the public ought to be on their guard against that sort of thing.

"'The Merchandise Marks act of 1887 is now in abeyance. Germany or any other country can send goods into Britain without clearly showing the country of manufacture.

"'The government has appointed a committee which is at present considering the question of merchandising marks. When my association applied for representation on that body we were informed, "No room, full up, but you may give evidence."

"'We will give evidence. We are going to urge that every article of foreign manufacture must be stamped 'foreign manufacture,' or 'foreign produce' or 'foreign make.'"

## A RHYME IN SEASON

Why does the pesky little moth
Improve his busy season?
Because your garments are exposed,
That really is the reason.
Of course there are many, many ways,
When used, prevent the worm
From snuggling in his victims' clothes,
And then again you'll learn
It's best to beat your goods each year,
For moths will sure return.

—Reegtherhymer.

## FOUND ON THE WALL OF A RAILWAY STATION

The following article was found neatly pasted on the wall of a waiting room in a railway station in this state. Read it carefully. It concerns you and every merchant doing business in your city. Make it a point to see that such propaganda is not being spread in your town. If you are indifferent to such attacks instituted against your methods of doing business, you might as well be out of business, for such exposure of what the M. O. house claim to be your business methods, will slowly undermine your business prestige. With your customer's confidence in you gone, you cannot prosper. Read carefully:

"In standard goods, if your local dealers are raising prices in unison, get one or more of the big mail order firms catalogs and do some comparing. Your local merchant, if he knows his business will come reasonably near meeting those prices, if they are tactfully called to his attention. These catalogs form an interesting reference library anyway, they give a little better fair price list than most of the local committees usually controlled by merchants, whose profits lie in fair prices. Above all and once again don't buy unless and until you really need to.

"The government cannot control high prices. Local committees even when well mentioned are powerless. The great financial interests now thoroughly alarmed would like to put a check on present tendencies, but do not know how. The remedy lies with the common every day American like you and me. Ask yourself, if you are on the sucker list? If you are, get off and stay off."

---

If you want to boost your trade, just study the following plans and you will find them food for thought:

"The Own Your Own Home Campaign" is being vigorously pursued all over the country. Get busy on the hardware job. Builders' hardware, house furnishings, electrical appliances and carpenter tools are all going to be in demand. The man who goes after the trade will get it.

Go after the trade by establishing friendly relations with contractors and carpenters and builders and by advertising your ability to serve individual home owners.

Now that skilled labor is so high, many people are doing odd jobs at home themselves. Women are learning to pack faucets. Men are hanging their own doors, or replacing a broken hinge, and many a nail will be driven by amateurs this year. Aim to furnish these people with the tools and supplies they need and be interested in explaining how to use them.

---

Being out of debt is the best thing out.

# Records That Show the Dealer Every Figure of His Business With Little Effort

**Importance of Knowing Each Month What You Are Doing, Applicable to Small Stores As Well As Large Ones**

(By Walter Engard)

THE needs of accurate store records has never been so important as it is today, yet there is a tendency on the part of many retail dealers to conduct their business without any adequate system of store records. Thousands of stores throughout this country have to wait until the completion of that laborious and much dreaded counting, sorting and figuring period called the "Inventory" to find out exactly the real condition of the business.

And the average hardware dealer, after he has footed up the inventory, feels that after all has been said and done, the information acquired by this means is too indefinite. He finds that the net profit usually falls far short of what he expected and what he has a right to expect in view of the business done during the year. The inventory does not show the dealer where the leak is nor what he may do to better the situation.

The only remedy is a complete and accurate system of store records—records that will enable the merchant to determine whether or not his business is returning a fair profit without the necessity of waiting until the annual inventory is completed. If not, they should enable him to locate the leak. Such a system of records will afford the merchant an accurate means for promptly correcting errors or extravagances in policies and methods, for checking the accumulation of otherwise inevitable losses, and to quickly develop plans which will result profitably.

### Satisfaction of Knowing

This system of records should be simple, and the detail work necessary to keep them should be reduced as much as possible. But there is such a thing as making them too simple, so simple in fact that what the merchant saves in time he loses in knowledge of his business.

His records should be more than a mere jumble of figures. Occasionally a dealer will have his figures in such shape that although theoretically he has every important figure in front of him, yet when he is called upon to segregate his figures so that it will be possible for him to make out a financial report, he is unable to do so. The merchant should have his figures in such form that he can analyze his business transactions during a certain period when that becomes necessary and enable him to furnish his banker or his creditors if necessary with a true report of his financial condition on short notice. But the satisfaction for him to know is more important.

The system of store records here described is one that will give the merchant a thorough knowledge of every important detail of his business in the least amount of space and with the least effort.

There are but two separate forms, yet it is complete in every detail and if kept up will give the dealer a true insight into the progress of his business and its true financial condition at any time.

With these forms for keeping an accurate record, he will have before him the facts of his business in such a way he will know what to do in his merchandising, what stock to push, what stock to buy, where expenses are heavy and should be reduced, or where he can afford to spend more and in doing a bigger business and make more profit.

The whole thought in devising this system of store records is to make a guide to better retailing instead of a mere matter of record keeping.

All details are cared for in such a way that the merchant will know every morning exactly how he stands, and no merchant can direct his business properly without having such facts constantly available.

### Accurate Records Are Not Based Upon Guesswork

Good management is not a matter of guesswork and you don't use good judgment when you guess. Therefore guesswork should have no part in the installation of this system. To give you proper basis for the control of the business the system must be installed properly.

### Inventory First Necessary

To start this system of records, for that matter any accurate system of records, the very first thing to do is to take an inventory of all stock on hand. This is the only way in which you can be sure that future information is going to be accurate. The taking of the inventory cannot be too exact and the dealer should impress upon those who take the inventory the importance of counting and entering every article correctly.

If you do not have your stock divided into various departments, I would advise the first thing you do will be to departmentize your stock. This will facilitate the taking of the inventory and will enable you to have a better

control of the business. While this is not absolutely necessary, the dealer will find the information secured through these records will be much more complete and of infinitely greater value.

If the merchant is to establish his business upon a sound business basis, he must have a record of each department in order to know just what each department of the business is doing. Only through keeping separate records is he able to determine whether each department is making money and how much; whether the cost of operating each department is more than the actual returns—all of these things bear a very important relation to the profit of the whole, and the dealer should have records of each department to establish each department upon a profitable basis and make the business return him all the profit it should.

**Numbering Each Item Makes Future Work Easy**

The inventory of each department should be kept separate.

With the use of this system it is necessary to "stock number" every article; this should be done while taking inventory if you do not already use a stock number system. Every item should be numbered and this number should be preceded by the department letter.

Suppose you have your stock departmentized into seven departments and you have a letter representing each department, as: A, B, C, D, E, F, G. Then in department "A" all items will be numbered as "A-243," "A-244," etc., and in department "B" they will be numbered "B-856," "B-871," etc.

The stock number should appear upon every article wherever possible. This may be done by using small tags, stickers, price-tickets, etc. In the case of nails, screws, bolts, etc., it will be impossible to have the stock number appearing on the article, but in this case the stock number should be on the bin, drawer or case in which the article is kept.

When taking inventory, the name of the article, quantity, stock number, cost, selling price and manufacturer's number should all be entered upon the inventory sheet.

Form No. 1 is the "Stock Record Form." This form should be provided in a loose-leaf book which will be known as the "Stock Book." This book should be provided with index sheets in order to keep the stock records of each department separate and to facilitate the finding of certain stock in the various departments.

One of these forms, No. 1, should be used for each article, entering the name of the article and under the headings the information called for, such as stock number, manufacturer's number, size, list price, cost, description, selling price each and dozen, also special price to contractors.

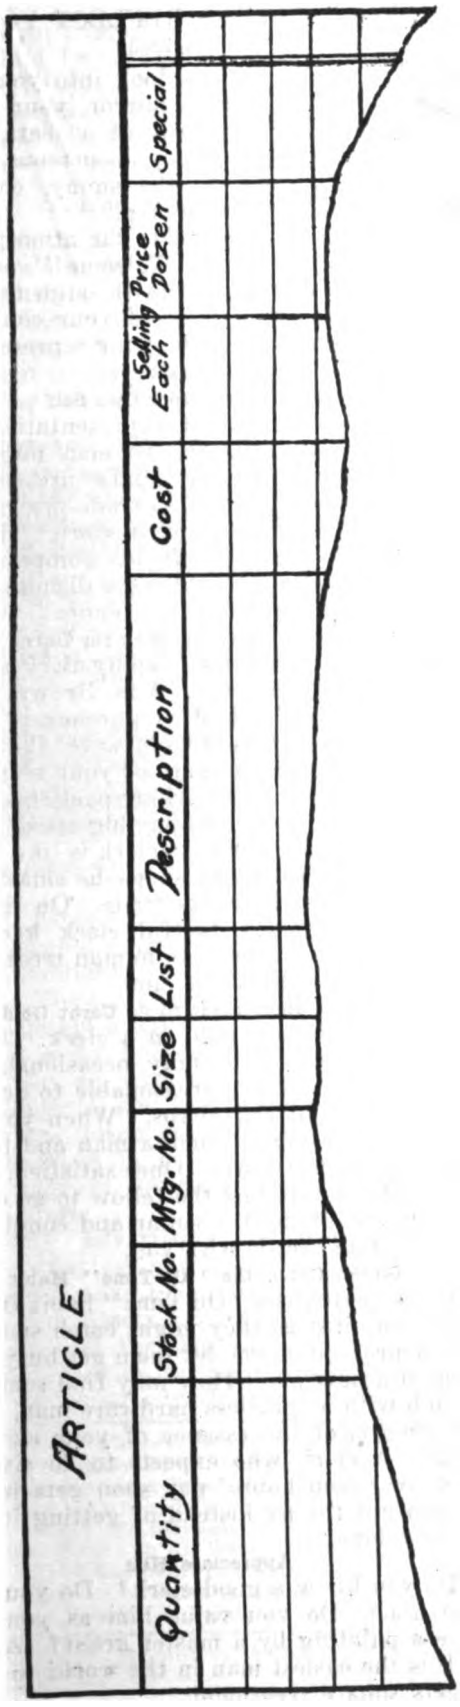
Then you should total the inventory sheets for each department and find the total amount of stock on hand in each department, and then turning to form No. 2, the "Record of Business" form, you will note this form provides for the records of one department only and a separate form should be filled out for each department.

Upon this form will enter the name of the department for which the records are kept, also of the month. This form provides for one month's records and a new form will be used each month.

Down in the lower left hand corner, space has been provided on this form for keeping a perpetual valued inventory of the stock in each department. Using the line "Stock on hand first of month," enter the amount of stock on hand as shown by the inventory sheets for that department. The system is now ready for work.

In this system of records, in fact, any system, it is necessary that the dealer should adopt the use of sales slips for making a record of every transaction. This is very important. When the salesman makes a sale he will make out a sales slip, entering the name of the article, the quantity, stock number and price received; also enter on his sales slip the name of the customer if the sale is charged.

**Cashier to Keep Sales Sheet**



These sales slips should go immediately to the cashier following the sale. The cashier should have a sheet for entering sales as they are received. This sheet should be so ruled as to accommodate the keeping of each department's sales separate. When the sales slip is received by the cashier, she will credit each department with the sale of any article sold from that department.

Thus, if a sales slip comes to the cashier, recording the sale of articles numbered "A-321," "C-574," "F-902," she will credit departments "A," "C" and "F" with these sales. This sheet should provide a column for entering the cost of the articles sold under each department heading. When the sales slip is received she will turn to her stock book and find the cost of the article sold and enter the cost in the cost column.

At the close of the day the bookkeeper or cashier will total the sales for each department, together with the cost of the goods sold in each department, and then, turning to the "Record of Business" form for each department, will enter the amount of sales and cost of goods sold in the columns provided on his form headed "Sales" and "Cost of Sales." Now substracting the cost from the sales, she will enter the difference in the column headed "Gross Profit."

Under the heading "Purchases," as provided on this form, the amount of all purchases for each department is to be kept. All invoices for goods purchased should be kept on file until the goods have been received and then the goods on the invoice should be charged to the various departments, charging each department with the goods that go into it.

Digitized by Google

**Operating Expense**

Under this heading this form provides for keeping an accurate account of all operating expenses. By keeping each item of expense separate the dealer is enabled to tell what each item of expense amounts to in each department and thus know where he should reduce and where he can expend more. All expenses should be pro-rated to the various departments according to the size and volume of sales in that department. Any expense incurred directly through the operation of any department should be charged direct to that alone.

Such items as rent, office expense, salaries, including that of the proprietor, heat and light, insurance, taxes, advertising, etc., should be pro-rated according to the sales in the department and its participation in that particular expense. Under this heading there has been provided a column for charging off depreciation. The dealer should determine the amount of depreciation on equipment and fixtures to be charged off during the year for each department and then charge off one-twelfth of that amount each month.

At the close of the month the bookkeeper will total each column and enter the total as provided on this form. This gives the dealer a complete record of the progress of each department, showing the volume of sales, cost of sales, amount of purchases and total expense for each department. It also provides for entering the expense ratio to sales. Here the dealer may see what percentage each item of expense bears to sales, what percentage of sales the total expense in that department requires, thus enabling him to know whether his percentage of mark-up is sufficient to cover the cost of operating and still leave him a fair margin of profit.

As soon as the various columns have been footed, you will complete the perpetual value inventory record by entering the total amount of the purchases for the month, using the line marked "Goods Purchased," and substracting the cost of goods sold during the month from the goods purchased, plus the stock on hand at first of the month, you have the value of the stock on hand at the close of the month and with which to start the next month's business.

This figure will then be transferred to the new form for the following month's records. With this record completed each month, the dealer is in position to gauge his buying as this will show him what condition his stock is in. It will also enable him to figure his rate of turnover in that department. In order to determine the rate of turnover in each department, divide the amount of stock on hand by the cost of the goods sold.

This feature alone is worth the cost of keeping the records, because it enables the dealer to absolutely know what is done.

Under the heading of "Profit" as provided on the bottom of this form, the dealer is able

Digitized by Google

to determine his actual net profits for the month from each department, to know which departments are profitable and which are not. It will give him this information so he can apply a remedy if necessary and establish the department upon a profitable basis or discard it altogether.

By the use of these records the dealer may have a monthly profit and loss statement of his entire business in less than thirty minutes after the accounts are closed for the month, no waiting until the annual inventory is taken in order to determine whether or not the business is making money. He can furnish his banker a true condition of his affairs the first of every month through an accurate financial statement without any great effort.

The dealer may prove the accuracy of these records at any time by taking a physical inventory of any department. With this system of records it is not necessary to inventory the whole stock at one time, instead the dealer may inventory each department at such period of the year as suits him best, using that period of the year when the stock in that department is the lowest.

This system brings before the dealer every important fact and figure of his business for the successful management. No element of guesswork need to enter into the management of the business, and these records shall serve as a chart to enable him to pilot the business safely to the Port Success.

---

## GOOD SUGGESTIONS FOR THE SALES FORCE

Walk to your place of business, if possible, so you may feel that "pep" and vigor that comes after a long walk in the open.

Upon arriving, look in the windows so you may know what is displayed, so when people ask for something in the window, you know what is there.

Be sure you report on time also.

As soon as you reach your store, spend no time in idle gossip but get to work and make your counter ready for business.

Smile a greeting to the first customer and keep it up all day; you will find it will become a habit and like all good habits prove helpful.

If you have any spare time, turn to the telephone and call such customers as you think will welcome your suggestions about goods on sale.

Make it your business to be dignified, pleasant and business-like to all whom you serve.

Be sure your sales tickets are right and watch for "mistakes."

Enter in your "Want Book" goods asked for not in stock.

Leave at the close of business only when the last transaction is finished, and don't rush the last minute customer.

## YOUR CLERKS REFLECT YOU

(Copyrighted)

Your patrons look into your clerks and see, as in a mirror, your own reflection. As birds of a feather flock together, so sunny, courteous, tactful clerks flock to the sunny, courteous, tactful hardware man.

It is up to you to create the atmosphere of your store; you say, "Welcome!" or, "Not Welcome!" to your patrons through the bunch of clerks who stand back of your counters to show up your goods, to be your representatives in the court of human nature.

### Clerks Mirror Your Own Self

Good backing, good representation, good clerkly mirrors, a hardware man must needs have. The clerk who will misrepresent goods in order to make a sale is a trade-preventer, an atmosphere-polluter for your store. His room is far more valuable than his company. The honest hardware man abhors a dishonest clerk more than nature abhors a vacuum.

### Small Courtesies Pave the Way for Large Sales

Small courtesies by a friendly clerk are road-smoothers to your store. Mrs. Brown may return and bring seven other purchasers to your store for no earthly reason save that bit of thoughtfulness on the part of your clerk when he offered to tie her various packages in one bundle. Small courtesies pay big dividends.

A tactless, discourteous clerk is like the proverbial bull in the china shop—he smashes people's feelings and wrecks trade. On the other hand the courteous, tactful clerk keeps 'em coming—people respond to human treatment as a flower responds to the sun.

### Patience Equivalent to 24 Carat Gold

Patience is pure gold in a clerk. There is an occasional patron—only occasional, thank the Lord—who is as unreasonable to deal with as is an African rhinoceros. When you get a clerk who can handle such a man and hold his trade, you have a jewel. Once satisfied, the unreasonable man is just the fellow to go out and take his friends by the collar and compel them to come in and trade with you.

### Clerks Catch the "On-Time" Habit

Clerks catch the "On-Time" habit from the proprietor, just as they might catch small pox. If they prove immune, let them get busy trying to catch a new job. They may find some timeless job with a spineless hardware man, but see that time is of the essence of your clerk contracts. A clerk who expects to do six hours work for seven hours' pay soon gets it where the hen got the ax instead of getting it in the pay envelope.

### Appreciate Him

Do you know a good clerk? Do you appreciate him? Do you value him as you would value a painting by a master artist? A choice clerk is the easiest man in the world to hold if he gets square treatment.

## PROMOTING PAINT TRADE

It doesn't impress a perfectly healthy man to tell him Dr. Jenks is the best physician in town. He doesn't need doctoring. Neither does it impress a man who thinks he doesn't need paint to advertise:

> We Sell
> Billups & Squillups Paints
> Best on Earth

Here's a shock for you. The biggest volume of paint trade in this country is the trade that doesn't exist. Let's put it another way. There are more people who imagine they haven't anything that needs painting, than realize they do need some paint and actually buy it.

**Courteous, intelligent service—showing the exact effect he may expect to obtain on his work**

For instance clothes closets in the homes of our people scarcely ever are blessed with a ray of sunlight, and seldom ever get a good airing. They become unsanitary, breeders of disease germs, a source of sickness.

How many housewives realize this? How many that do, realize also that paint is a tip top germicide, and that a coat of it applied to her clothes closets every spring might ward off some sickness in her family, and would certainly improve the odor from the closets if it did no more.

Merely advertising Billups & Squillups Paints—Best on Earth—will never in a thousand years make a housewife think of painting her clothes closets. But think how much paint could be sold for that purpose if our women were educated up to the need of it.

What would advertising like this do?

> Smelly Clothes Closets are Unsanitary
> They Breed Disease Germs
> Billups & Squillups Paints are Splendid Germicides
> Give your Closets a Coat this Spring and
> Ward off Sickness in Your Family
> We Have Your Can All Wrapped Up Ready For You
> When Will You Call For It?
> Smith & Jones
> Dealers in Paints & Varnishes

Try some promotive advertising, Mr. Merchant.

Develop some of the latent trade; the big trade that doesn't now exist and never will exist until some good paint merchandising methods create it.

## SUGGESTION FOR PAINT DEALERS

Painted interior walls are becoming very popular. They are especially to be recommended in homes where there are young children. We all know the havoc created by sticky small fingers upon delicate wall papers, and it's no reflection on wall paper to say it.

A good many interior decorators are prepared either to paint or paper as the customer prefers. A decorator likes to give the customer the best possible service, because he knows that a pleased, satisfied customer sends him trade.

It is a real service to bring to the attention of parents the merits of painted walls. Many people have never seen anything but a plain plaster wall or a papered wall. When a painted wall is suggested, they immediately think of whitwash or kalsomine, and will not listen to it, but show these same people a room nicely painted in gloss or flat colors, at the same time explaining that the kiddies' finger marks can be washed off it without injury, and they will often take to the idea instantly and thank the decorator for his thoughtfulness in suggesting it.

Here is a new idea for a dealer's ad in the newspapers he uses:

> **FINGER PRINTS ON YOUR WALLS?**
> Have you ever considered painted walls in your home while the children are small?
> **Finger Marks Can Be Washed Off Without Injury to the Paint**
> Painted walls are really artistic. Drop in and let us show you some color combinations. See for yourself how pretty a painted interior can be made.
> **Let Us Paint a Room or Two for You This Spring**
> Then stop worrying about the kiddies' sticky fingers.

## PAINTING LINOLEUM

How many merchants ever try to sell paint to be used in painting linoleum? Not many, we venture; yet there is a field for paint sales. The design wears off printed linoleum in front of the stove, the sink, doorways and in other spots where the wear is hardest. The bare spots do not look well. The housewife would like to do something to improve appearances, but the only thing that occurs to her is new linoleum, and after inquiring the price she usually dismisses that from her mind.

At this point the paint dealer, by means of a window card, a newspaper ad or a leaflet, suggests a coat of floor or deck paint; a uniform color all over looks a lot better than figures here and there and spots there and here. Try out the idea, Mr. Merchant of Paints, and sell more paint.

## THE RIGHT TO STRIKE LIMITED BY THE RIGHTS OF OTHERS

(By William C. Redfield, former Secretary of Commerce)

Once upon a time there were in a large metropolitan club two unwritten laws. The first was to the effect that a member had the right to get drunk in his own club. This was the doctrine of full personal liberty. The second law, however, said that no member had the right so to act in his club as to annoy another member. Here was the restraining force. It limited personal liberty by the right of others to be free.

### Rights and Obligations Balanced

The declaration of independence says mankind has certain inalienable rights. It adds that among them are the right to life, the right to liberty and the right to the pursuit of happiness. It needs but little thought, however, to make clear that an inalienable right is not unlimited and that no right can go to an extreme without finding itself limited by obligations arising from the rights of others. For example, the right to life itself is not unlimited. When the nation is in danger it enacts a draft law calling upon its able bodied citizens to fight.

In other words, the duty of the citizen to the state is greater even than his right to preserve his own life. The right to life itself is limited by the obligation of citizenship.

### The Right of Liberty is not Unlimited

Our freedom of action is restricted on every side by the freedom of action which belongs to others. The whole development of law is evidence that our right to personal liberty is bounded and restrained by the personal liberties of our fellow men. We are not, for example, at liberty to build on our own property in certain places and under certain conditions, structures of a character and for a use which would injure the property of others. We are a free people indeed, but free under law—the law being the rules which experience has shown to be necessary to keep freedom from being exercised to the hurt of one's fellows.

The same principle applies to our right to the pursuit of happiness. Our prisons are full of men who have sought their pleasure or profit by methods contrary to the rights of others. On every side rights are limited by obligations. That is the recognition we owe to the rights of other men as free as we are.

### "Rights" Limited by Obligations"

These principles are so clear that it seems almost a truism to state them, but their force is always recognized when it comes, let us say, to such a matter as the right to strike. We cannot permit industrial autocracy in this country or take any backward step that would look in the direction of general compulsory labor or would remove the privilege of the individual to seek employment when, where and as he will.

Nevertheless, for the sake of freedom itself it cannot be admitted that the right to strike is an unlimited right. Men are not free in organized masses so to exercise the undoubted right to leave employment as to ignore the rights of others or to inflict serious injury upon other men generally in order to gain the advancement of relatively few. The right to strike, like every other right, carries its obligations, and the obligations of citizenship are supremely imposed upon it. This right cannot be detached from definite and clear obligations toward others and toward the country as a whole.

### Autocrats Should Have a Care

Our leaders of labor will do well to consider how far they may carry the exercise of the right to strike. Already there are signs that the public knows there are limits to this right. Both at home and abroad action is taken with general public approval—nay, on widespread public demand—based upon the fact that the safety of the country is supreme and puts a limit on the right to strike as it does upon the right to life itself and upon other rights. No right in this country is so broad as to exceed the obligations of a citizen. There exists no right to cause injury to the whole country in order to promote the supposed welfare of part of its people.

Autocracy is everywhere intolerable, but not less intolerable when it seeks, by the general injury, to work the advantage of a group than when in the hands of a single autocrat it imposes one man's will upon his fellow men.

---

## WHEN THE "CULLUD" MAN GETS HIS CHANCE

A young physician gives the following amusing conversation with his valet, who was a negro.

"He didn't have no business to call me a nigger, did he, doctor?"

"There is no harm in the word negro," explained the doctor. "Negro is the name of your race, your people. Every race has a name, the Indian, the Chinese; the name of your people is the negro race."

"You say dat, doctor? You thinks dat? But us colored folks, we know dar ain't but one nigger—he's de bad man."

"But that is the talk of ignorance," argued the doctor. "Here is the meaning of the word negro in the dictionary; don't you see—a negro is a black man?"

"Did a white man make dis book, doctor?" asked the boy.

"Yes."

"Well, doctor, you know how it is 'twixt white man and nigger. You know if the white man made de book he glad ter writ it down dat de black man is a nigger. Hit don't 'stonish me ter read dat writ in a book a white man make. Des wait till de nigger makes a dictionary!"

## THE RIGHT AND WRONG WAY TO DO PROFIT SHARING

(Copyright by Elton J. Buckley)

Among all classes of employers, large and small, today there is an urgent desire to find some plan of tying employes more closely to the business and obtaining their maximum efficiency, first, in order to prevent strikes and unpleasant arguments and, second, to put solid ground under the feet of the business and get out of it all there is in it.

To this end all manner of plans are being discussed—commission-on-sale plan, profit sharing plans, bonus plans, graduated wage-increase plans, and so on. The following letter is one of very many I have received on the subject:

Our firm has two stores, with net assets of about $22,000 in one and $32,000 in the other, exclusive of our real estate, which is held separately.

There are two members of the firm. We desire to let some of our employes have a share in the business, but do not know the best method of doing it.

We have thought of having the business incorporated for $50,000 and letting these employes take stock. What are the advantages and disadvantages of this method?

Our employes have been with us a good while. Some are relatives. We want the safest and most economical way of letting them have an interest in the business.

Doubtless this problem has had considerable attention by you, and we shall appreciate a statement from you.

Of course, the purpose of all these plans is the same—to tie an employe to the business, to satisfy and quiet him and to make him work for the business as if it were his own.

The purpose is of course most estimable and following it out would in my judgment solve all of the vexing problems, except perhaps that of recognition of trade unions. But a thing like this must be carried out with discretion. John Smith, a valued employe, is often a very different person after being given stock in the business than he was when he was simply on the pay roll. The thing to do is to give him the incentive, but not in such a way that he can become a nuisance.

I should hesitate a long while, if the business were a comparatively small one, before I gave stock to any employe, unless it were one whom I knew all about, and even then I would hesitate. A minor stockholder who has a grievance against the business, or thinks he has one, can make a heap of trouble in a small corporation. It is a risky thing to do, as I say, in a small corporation. In a large one like the United States Steel Corporation, the stock plan is used with perfectly good effect, because there are thousands of stockholders, the business is in strong hands and strong control, and the individual can make little if any trouble. But even these large corporations often give their employes stock with limited powers to it.

The best plan, everything considered, is to make a regular agreement with your employes providing that on certain conditions they shall receive as an extra bonus over salary, a given percentage of the net profits of the business. I have found this to work better, everything considered, than commissions on sales, or stock plans, or almost anything else, for the reason that it gives the incentive without the power to do mischief.

The conditions on which such an agreement should be made, generally speaking, are, first, that the employe shall remain with you for the entire year; second, that he or she shall give the best work possible, and, third, that the services rendered shall be satisfactory to the employer. Individual businesses will also have special conditions to include. Sometimes these agreements provide that the employes shall have the power to appoint a committee of themselves to examine or audit the books in order to verify the employer's statement of profits.

An employe whom it is desired to conciliate stands or falls, under that plan, on the same fact as if he held stock under the other plan, viz: the fact of profit. If no profits are earned, his stock draws no dividends, or, as the case may be, his profit sharing agreement bears no fruit. There is therefore no cause for dissatisfaction under one plan which is also not present under the other.

---

There are three kinds of salesmen—the men who wish they could do it—the men who promised to do it—and the men who do it.

---

The country has had more than enough talk from politicians, who continue to talk over much of the "glory of sacrifice" and how it was the "sincere regret of their hearts" that their official duties prevented them from being at the front.

The records show that they and their relatives took particular pains to see that none of their number were among those who made the "glorious sacrifice."

---

## THE FRIENDLY CLERK

How strange, on my way home from work,
I stop to chat with friendly clerk
In hardware store. Observing eyes!
Sees everything! That clerk's a prize!

If I have rusty dinner pail
That clerk says to me, without fail:
"Nice lot of dinner pails just in;
Would make good mirrors, sure as sin."

He'll never company with fools!
Talk garden—"How about the tools?"
Talk flowers—"A new lot of hose!"
Talk anything, my bill just grows.

He knows the brightest stories, jokes,
And human things 'bout human folks;
But everything leads up to trade.
'Cause that's the way that clerk is made.

## MERCHANT DOESN'T HAVE TO SELL MERELY BECAUSE HE ADVERTISES OR DISPLAYS GOODS AT A PRICE

(Copyright, by Elton J. Buckley.)

"If a merchant displays something for sale, with the price attached, is that an offer to sell which he has to carry out when somebody comes up and says 'I'll take that'?"

That is the interesting question raised by the letter which I am reproducing below. My recollection is that I have never written anything on it:

New York, N. Y.

Kindly give me an opinion on the following:—

B owns a store. He displays cameras in his window at $10 each. A customer comes into his store and asks to see one of them and after inspecting it decides to purchase.

The clerk then advises him that the price has just advanced, and from that morning on they are obliged to ask $10.75.

The customer calls attention to the fact that they have the cameras priced at $10 and claims that that is the price he should be charged and not the advanced price.

The clerk says that they have not had an opportunity to change the window display yet and that when they do it will be attended to.

The clerk further claims that even if they did have any goods in the window advertised for sale they are not obliged to sell them.

The clerk also claims that even if they put an advertisement in the papers advertising the cameras they are not obliged to sell them.

My idea is that the store is compelled to sell the customer any merchandies that it advertises, either in its window, on counters or in the papers, at the price advertised.

A legal viewpoint on this and what a customer can do to force the store to sell him the goods so advertised will greatly oblige,

RUSSELL D. SMITH.

At first glance it would seem as if a merchant who displays or advertised goods at a certain price, ought to carry his offer out when a cutsomer appears who is willing to accept.

And yet he is not obliged to do so if he wishes otherwise. That is the settled law, and it applies both to an offer conveyed through advertising, and to one conveyed through a window display. The law holds that that is not an offer to sell anybody who comes forward with the price quoted, but an offer to consider offers, if you can follow me in that. It still reserves to the seller his right to accept or reject offers as he likes.

You can easily see that this would have to be the law. Suppose the law was that the merchant who displayed the $10 camera had to sell at that price to anybody who came in. Well, if that were true, it would follow that he would have to sell everybody, and that would violate his fundamental right to choose his customers. The minute he quoted a price, that right would be waived. So the law says that advertising goods at a certain price or exhibiting them in a window at a certain price, is no more than a statement like this: "I have some cameras here which I have priced at $10. If interested come in and I will decide whether to sell you or not."

Right at this point I recall a case in which a book dealer had advertised a book at a certain price in a catalogue. Some customers didn't get it and sued the dealer on the theory that having quoted the book in his catalogue at a certain price, he was bound to sell. The court exposed the fallacy of the theory with the following argument:—

A book seller's catalogue with prices stated against the names of the books, would seem to contain a number of offers. But if the book seller receives by the same post five or six letters asking for a particular book at the price named, to whom is he bound? To the man who first posted his letter of acceptance? How is this to be ascertained? The catalogue is clearly an invitation to do business and not an offer.

Here is the whole law of the case summed up in few words from a leading decision:—

Business advertisements published in newspapers and circulars sent out by mail or distributed by hand, stating that the advertiser has a certain quantity or quality of goods which he wants to dispose of at certain prices, are not offers which become contracts as soon as any person to whose notice they may come signifies his acceptance by notifying the other that he will take a certain quantity of them, but they are simply invitations to all persons who may read them, that the advertiser is ready to receive offers for goods at the price stated. It must be remembered, however, that in all these cases the question is one of intention, and that whether or not such transactions are agreements depends on the intention of the parties as collected from the language used and the nature of the transaction.

Everything said above applies equally well to a display of goods in a window or in a store, for the principle is the same. As another case puts it, "The mere statement of the price at which property is held cannot be understood as an offer to sell. The seller may desire to choose the purchaser and may not be willing to part with his property to any one who offers his price."

Naturally, nothing said above applies to a case in which a seller says directly to a prospective buyer, either by word of mouth or in a letter, "I will sell you this for $10." In that case if the person addressed says "All right, I'll take it," there is an enforceable contract on both sides.

---

## WORLDLY WISDOM

Bessie was the dearest little dog, and her mistress was passionately fond of her. One day the little girl was told by her mother that she must not see Bessie for two or three days, and then, when at the end of the time she found her dog, it was with five puppies.

"Why, Bessie," said the little mistress as the little dog leaped into her arms, "why, you dear little doggie, I didn't know you were married."

---

An optimist is a fellow who is still carrying an opener on his key-ring.

## SIXTY-FIVE FEET OF DISPLAY IN THESE TWO SHOW WINDOWS

As dyed in the wool fisherman and friend of all fishermen in his clever devices of tackle and leaders, Joe Welsh is well known to the trade. As proprietor of the Pasadena Hardware Co., one of the most progressive of the live institutions of Southern California, Mr. Welsh is perhaps not so well known. It is for this reason that we are going to reproduce a panorama of the show windows of the Pasadena Hardware Co.

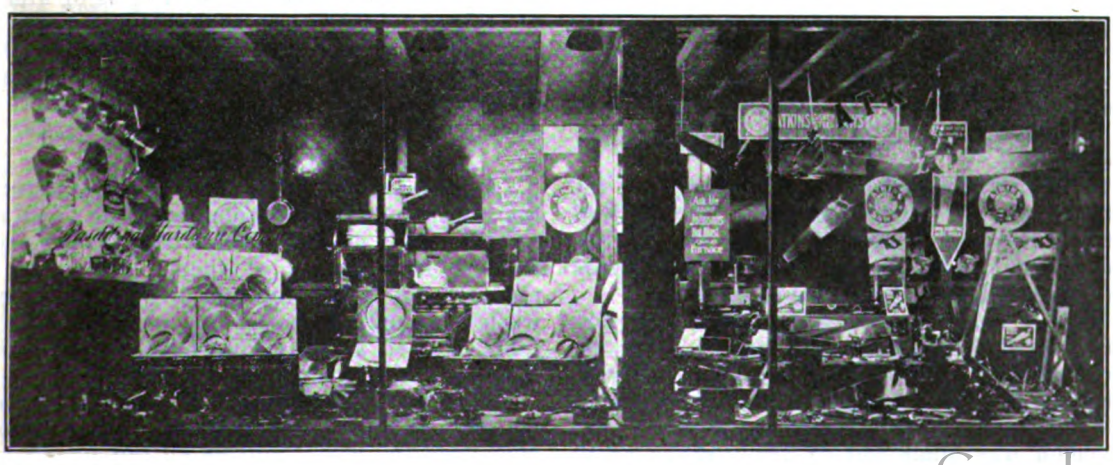
Mr. Welsh has put in thirty-two years of his life with the Pasadena Hardware Co., starting at the age of 22, and the flourishing condition of the business as well as the flourishing condition of Mr. Welsh are each mutually responsible for each other.

---

The Sparks Hardware Co., is erecting a pretentious new fire proof home at Pagosa Springs, Colorado. Proprietor Harry Sparks is a progressive merchant and this expansion is .. result of his enterprise and a tribute to it.

This double window is on each side of the entrance to the store, in fact its entire width is 65 feet. The illustration herewith gives some idea of the brilliance and taste which is used in arranging the stock in these windows and in planning the display.

To the left of the entrance when this picture was taken one of the large windows was devoted entirely to household goods including fireless cookers, a stove, enameled ware and electrical household appliances. Then there was a tool window, with not too many tools, and with neat display cards as a background. Especially notice the effect of concentrating attention on one saw rather than chucking the window full of saws helter skelter.



To the right of the entrance is a more seasonable window, sporting goods being displayed on the corner, featuring the immense tuna fish of the California coast off the Catalina Islands famous. The last window on the right might be called a summer window, for it features refrigerators, bird cages, lawn mowers, garden hose and some further sporting goods.

## A TRADE RHYME FOR A WINDOW SIGN ADVERTISING A HOUSE FURNISHING DEPARTMENT

### A SONG TO THE GARBAGE CAN

Says the Galvanized Pail to the Garbage Can near—
"They make me for water to hold;
But you, my dear boy, they fill full of waste,
That's useless, bad smelling and old."
"This all may be true," says the Sink-Brush and Shovel,
"But we help the Garbage Can much;
It's quite necessary for us to be used,
Where the hands of the Housewife don't touch."
The Sink-Drainer said, "You both are quite right,
Where waste is the quantity due,
But do not forget, I'm right on the job
To help fill the Garbage Can, too."

—Reegtherhymer.

# The Good Points of a Salesman

(Copyrighted)

### Cleanliness of Speech

I am a dyed-in-the-wool optimist, a firm believer in the fact that the present business days are better than the olden days. Is not the foul-mouthed salesman following rapidly in the wake of the dodo and the dinosaur, and will he not soon be as extinct as they?

The English language is not yet so poverty-stricken that we are obliged to dig up words from human sewerage with which to irrigate trade. "Give me a clean salesman!" is the modern cry; and the clean salesman gets the patronage. The dissolute salesman is also becoming only a memory, a nightmare of the past—full order sheets now instead of a full salesman.

### Cheery Optimism

All the world loves a genuine optimist. Even the grouchy customer, although he may not fall on your neck and kiss you, may entertain a secret admiration for you and almost wish that nature had not denied him the power of kicking himself into a saner frame of mind, simply because he has rubbed elbows with you. Be like the cheery salesman who called on me. Just to try him out I said: "Well, Joe, business is poor just now, is it not?"

Well, that cheery Joe just rubbed his hands together—even on friendly terms with himself, apparently—and his eyes twinkled as he said: "Yes, Mr. T——, it is poor just now, but it is going to be good!"

That was a good salesman combination; honesty and optimism, 'alf and 'alf. Optimism is as necessary as sunshine; it is as welcome and as warming as sunshine. Be optimistic, but truthful; don't be a cheerful liar or any other kind of a liar.

### Absolute Truthfulness

No amount of ability, knowledge of goods, or of natural tact or magnetism can overbalance untruthfulness. Customers shy out from a liar as from a pestilence. I have a vivid recollection of one of those transient, fly-by-night salesmen, who descended on me "like a wolf on the fold," with his bargains all gleaming in purple and gold.

In a hurricane of dictionary words he set forth his wares and informed me that he had just sold Brown a gross of a certain new article, and he would make me a special price—gross lots only—if I placed order that day.

Well, I know Brown—hard headed Scotchman, that Brown, sharp and shrewd. Yes, he was a competitor who made me sit up nights and keep thinking; he often had me guessing. That salesman might as well have told me that the moon was made out of apple sauce as to have told me a whopper like that. Brown never slept at the switch; he had the eye of a hawk and the judgment of a Solomon. I looked at the salesman coldly, and then used one dictionary word: "No!"

Do not cover defects in goods—show up the defects and get a little sunshine on them. I have noted that even defects in goods are wonderfully bettered by a dose of absolute truthfulness, but if you cover them up and a customer falls in afterward, why, he is apt to have a falling out with you.

### Use of Tact

Tact dovetails customers and order sheets together just as a skilful cabinet maker dovetails his corners. Cultivate tact and you will cease to harrow prospective patrons.

If you do not exercise tact you may soon find youreslf in a corner where your firm will say: "What was the trouble with our last lot of order sheets, John?" When you say: "Why? What do you mean, Mr. B——?" the big boss, who has his own original way of sifting salesman ashes, says: "Why, I just noticed that you seemed to be keeping them for souvenirs instead of sending them back to the firm."

Tact is a good adapter. I purchase what my electrician calls an adapter and put it on my out-of-date fixtures and the light flashes out once more from my tungstens. Tact is the adapter that makes the customer connections and causes the big boss to say: "Mighty good salesman, that John."

### Value of Good Nature

To be absolutely good natured when a customer is grouchy or unreasonable or provoking is not easy, but such a salesman will prove a winner in the salesman's marathon. When a grouchy customer once opens the door to you, and says: "Come in!" he is yours.

You hear what the grouchy man says, but you cannot know how ashamed he is of himself afterward. Possibly he says: "Well, I did not treat him halfway decent, but I will give him a good order on his next round." The salesman who can get the grouchy customer where he swears by him instead of at him is a winner.

### Saving Grace of Humor

A saving sense of humor is a real asset to the salesman. See the humorous side of human nature; smile at the peculiarities of customers instead of frowning at them. Get a lot of pleasure out of life by studying human nature while you sell goods. Your understanding of folks, as well as your knowledge of your merchandise, will be salesman-capital for you.

Have a humorous story on tap for the man who enjoys humor; the man who swaps humorous stories with you will be all the more likely

Digitized by Google

to swap cash for goods. But don't bore the customer who has no sense of humor with such stories—a chance for tact again; in fact, tact and humor should be a regular Siamese-twins combination in a modern up-to-date salesman.

**Study Addition**

To cleanliness of speech add optimism, to optimism truthfulness, to truthfulness tact, to tact, good nature, and to good nature add humor. Will not the sum total be A Salesman?

## DANGER IN SELLING TOO HARD

A purchasing agent of ripe experience says the biggest mistake of the average salesman is selling too hard. Prospects are simply dizzied with a profusion of selling arguments. The proprietor of a big clothing store says that only one salesman ever got over as many as seven selling arguments with him. And that one, having plenty of time on his particular proposition, made only one point on each of his trips.

He began with the standing of his house the first trip; on his next visit he emphasized design, on the third visit he sold the merchant on deliveries, etc. An Eastern grocery and tobacco jobber tells how for a good many years the salesmen of a certain food manufacturer were unsuccessful with him. The jobber told the first man that he preferred to buy nearer home on account of quicker deliveries and less chance of spoilage. After that this salesman and his successor spent all their arguments on this point. Then a third one came along, admitted the delivery advantage of his competitor, and then sold the jobber on the merits of his proposition!

Too often sales managers tell their salesmen to "discover the reason why he doesn't buy and meet it." Many a time the positive side of the selling talk is the one to take, not the negative. Again, the commonest form of "selling 'em hard" is talking too much, talking after the climax has been reached. Another mistake is taking too belligerent and aggressive a selling attitude.

One very successful salesman says he was never more than an average salesman until he learned not to argue with his customer. Sometimes too frequent visits of salesmen become a "selling 'em hard" error. A particularly successful salesman credits his success to a formula exactly opposite to "selling 'em hard"—"advise." His attitude is almost one of loyalty to the trade first, with his employer in second place.

---

Have a look at the worries of the past occasionally. How they have dwindled!

---

It would be thought a hard government that would tax its people one-tenth part of their time to be employed in its service, but idleness taxes many of us much more.

—Benjamin Franklin.

## RAISING HIS OWN PAY

Three years ago a wideawake youngish man got a job in a concern of moderate size This business was not located in a city, but in a small country place. The new man was engaged at a little over $3,000 a year to handle the company's advertising. He quickly discovered that, in order to make the advertising really effective, the goods produced must be improved in certain respects. Also, he realized that the best results could not be attained unless the spirit existing between the employees and the owners was changed.

He applied his mind to the whole, many-sided problem, and without creating friction started in to remedy matters. He was successful in making helpful suggestions for improving the product and permitted the company to take out patents without remuneration for himself. He strove with might and main and finally succeeded in convincing the owners that it was good business to spend a few thousand dollars to inject into the establishment a number of little plans which pleased the workers and riveted them to the organization. Meanwhile, he transformed the advertising from hum-drum announcements to live "copy," full of point.

All this time he was still nominally nothing more than "The advertising man." Then the management woke up to the fact that he had become one of the most important members of the organization, and in order to encourage him to stay, he was given the privilege of becoming owner of a moderate block of the closely held stock. Also, his salary has gone up from $3,000 to better than $10,000.

Have you spent days and nights and weeks and months of thought trying to study out every possible potentiality of your job, every possible means by which your work could be made of more value to your organization? Remember that the man or woman who never does anything but what he or she is given orders to do is little likely ever to rise to the position of giving orders to others.

---

Link energy with the Top Notch Line, and you'll have no kick coming.

---

When business slows down and you feel like cutting down expenses, cut them anywhere but in the advertising department.

## THE BEST

Let "Best of service, tools and wares,"
Your slogan be,
If you would woo and win the maid
Prosperity!
The sheriff-undertaker waits,
To bury deep
The hardware man whose slogan is
This one word: "Cheap!"

Digitized by Google

# Putting Personality Into Harness Hardware

THE name "North" is just as familiar and suggestive to the hardware trade of the United States as it is to the surveyor and mariner. The Norths have been among the first families in pioneer hardware manufacture, just as the Stanleys and the Corbins have been. And among the present institutions which have come down with "Northern" vigor is O. B. North & Co. of New Haven, Conn., makers of a full line of harness and saddlery hardware.

Although the harness business has dwindled in volume and in the number of its distributing members, there is still a demand at home and abroad for standard, reliable harness hardware. O. B. North Co., along with North & Judd and Covert Mfg. Co. and other such institutions, continue to put the best of materials and workmanship into their product, and thus "carry on," in the very face of changing market conditions. It is personality that does it.

The secret of success of any business is very often bound up in the personality of the man at the head of the institution. Thus it is that the personality of Frederick H. Stevens, secretary, treasurer and general manager of the O. B. North & Co., although not so long connected with the trade or the company, has come to represent the spirit of his company, and he is indeed a proud representative.

**FREDERICK H. STEVENS**

Secretary, treasurer and general manager of O. B. North & Co., who has met every customer of his company and who makes new customers every time he goes out among the members of the trade all over the country.

For one thing, he is connected with the North family, and so has the pride of ancestry, which is one of the company's riches. Furthermore his affability, his well-rounded experience, his wealth of interests and points of contact with the world and his fellow men, his able grasp of situations and conditions—all these combine to leave a lasting impression on the men with whom he comes in contact.

And let it be said in this connection that Mr. Stevens makes it a point to keep outside of his office and among his customers and the trade. In fact he can say he has personally met and visited every customer of the company. Few are the executives who can make such a claim. Indeed Mr. Stevens must realize that he is the very best asset that O. B. North & Co. possess. Not that he talks sales. Rather he creates business.

There are many, many interesting qualities in the personality of Mr. Stevens. He is so completely a finished gentleman. He is a master in the hardware and metal trade as far as harness hardware is concerned. He has been in his day a master journalist. He has spent many years of his life as a banker. In any company he is an art critic and musician also. As a conversationalist and as the happy possessor of that faculty of saying just the right thing at just the right time, he can win the good will any company or individual.

Several years ago the fortunes and destiny of O. B. North & Co. were in need of rejuvenation. The business had dwindled and as Mr. Stevens himself puts it, "The workers at the factory and the directors at the board meeting were in a continual state of figurative weeping." Mr. Stevens was called in to save the day. He has North blood in his veins.

At that time he was proprietor of a leading daily newspaper at Hartford, Connecticut. Contented as he was in this work, and successful as he had been, and interested as he could not help but be, he put it aside to enter the new work. From then on the policy of O. B. North & Co. has been to smile and stand straight. It is Frederick H. Stevens who set the example for smiling and he has stood the straightest. Now as he goes among the workers in the factory, he shakes them by the hand and knows them all.

Yet that is only a little part of Mr. Stevens' accomplishments. He brought to the company the policy of knowing its customers. As this comes before our readers, Mr. Stevens is back in New Haven, after a tour of the United States of several months. In the course of his trip, Mr. Stevens was present at the National Foreign Trade Convention at San Francisco, and he so arranged his route that it included every distributing point of saddlery hardware in the West.

### He Wears That Taft Smile

Words are cold and weak and formal in trying to give an impression of Mr. Stevens, for he himself is the personification of affability, of culture, of friendly good fellowship. As our readers will understand from his portrait, many people with the best of intentions have

Digitized by Google

mistaken Mr. Stevens for his notable fellow townsman, Wm. Howard Taft. It is interesting to know that these two gentlemen of the same appearance and same type of distinction are good friends.

As a boy, Mr. Stevens went into a bank in New England, where he was born, and although he was successful and was a good banker, he was by no means swallowed by the bank. He made it so he could get away from the bank now and then. He would get the evening train to New York in time for the Metropolitan Opera performance Friday night. Then he would be on hand again for Saturday matinee and for the evening performance. On Sunday he would finish the evening at an evening concert. Then he would get the two o'clock newspaper train home in time for work on Monday morning, a tired but inspired clerk.

Mr. Stevens has never lost his love for music, although he has relaxed somewhat in this zealous pursuit of the Muse. In fact, his nature is such that it demands it. Singing is typical of Mr. Stevens.

---

Cooperation means getting along with the other fellow. When you give him a lift don't do it with your boot.

---

Don't forget that your customers are not married to you. Reno is just a short word that means lack of attention.

---

You can get a pretty good line on a man's character by watching how he handles the dimmers on his automobile lights.

---

The man who does each part of a day's work just as well as he can is the man who goes home smiling.

## MY SUNNY HARDWARE CLERK

When day is cold and gloomy,
And rain is falling fast,
And grouchy folk are trading—
Each grouchier than the last!
When all the world seems gloomy,
And nothing seems to work,
'Tis than that folk appreciate
My sunny hardware clerk.

His eyes just keep a twinkling,
His spirits never fail;
His humor is contagious,
His jokes full oft' avail
To warm the grouchiest patron
Till cockles of his heart—
And purse as well—are all unloosed
By cheery salesman's art.

We wonder at the sales he makes—
At every patron's need;
The sunshine that he gives 'em all
Ope's doors of trade, indeed.

## ADVERTISING IN RURAL COMMUNITIES

Here are some of the suggestions recently proposed at one of the conventions for advertising by rural merchants:

1—Fence and billboard advertising.

2—Good stocks of good goods.

3—Letters to customers together with advertising in the local paper.

4—Take an hour off and shake hands with the people around the street.

5—The satisfied customer is the best advertisement, even to the extent of making good on an unreasonable claim.

6—A little house organ published by the store, mailed to all residents within the store's buying radius.

As to the percentage of the annual business that should be devoted to advertising it was suggested that not less than 1 per cent nor more than 2 per cent should be so spent, and that donations and charitable requests should not be counted along with advertising.

---

## BELGIUM WANTS OUR KNIVES

According to Godfrey Langlois, agent general of the Province of Quebec in Belgium, the latter country was no mean producer of cutlery before the war. Today, however, with the reduced supply of raw materials, the Belgian plants operate on less than half time. One large manufacturer at Luxembourg in 1913 produced no less than 30,000 dozen bread knives; 40,000 dozen table knives; 50,000 vegetable knives, of which two-thirds went to German customers, to be reshipped to other parts of the world. Today Belgium is scarcely able to take care of her own cutlery needs and has nothing to send to Germany for reshipment. German cutlery that has been received in America is mostly low grade and crude appearing, with the few better products that have arrived commanding prohibitive prices.

---

## BUY YOUR FIREARMS NOW

And get them in your store before July 1st. is good advice. We quote from a letter received from a large manufacturer of shot guns as follows:

"Generally we have several thousand guns in stock at this season of year but now we have practically no stock because our guns are being shipped as fast as built. We want to supply the home market first and will if the dealer will get his order in to his jobber at once. The condition here is about the condition of the other gun plants."

They concede that this represents the prevailing condition at other large factories, and that every indication points toward a sharp advance before the season opens up. We will let you draw your own conclusions.

Digitized by Google

## PHRASES TO AVOID IN WRITING ADVERTISEMENTS

Poor phrasing and the careless selection of words, is more noticeable in retail store advertising than in almost any other form. That comes naturally through the great haste with which retail copy has to be prepared compared with the greater length of time most other advertisers enjoy.

Writing to meet press schedules, it is so easy to slip into terms of exaggeration and shadings of the truth, that one department store head has issued a little booklet of rules on the subject. In it are set forth the customary words and phrases of the trade with reasons why they may or may not be used. Following are a few examples:

"All sizes." The use of this phrase is permitted only when a complete stock of all sizes is on hand.

"Bargain" (as applied to goods quoted below regular price) is a word the public understands, and its use is permitted where circumstances warrant.

"Best" is prohibited. Frequent misuse of the word has deprived it of its meaning and it is impossible to tell just when its application is correct.

"Choice of the house" or "Entire stock." These phrases are only permitted where every article is in stock and where no reserve supply is held back.

"Cost," "At cost" or "Below cost" are not allowed because the public is very likely to look upon them with suspicion.

"Ever before" is a meaningless phrase and is not used.

"Fortunate purchase," "Sample lot" and "Manufacturers' overstock" are not allowed to stimulate interest in goods from regular stock. When used they must apply truthfully to conditions.

"Sale" and "On sale" are limited to goods and occasions where actual reductions from regular prices are made.

"Half price," "One-third off' and similar phrases are only permitted where prices are actually one-half, one-third or more off.

"Last season's" is O. K. if it expresses the truth.

"Limited quantity." The use of this is encouraged where the supply is likely to be exhausted before the end of the day.

"Never before" and "Never again" are prohibited.

"Not all sizes" is misleading. Sizes should be stated, if possible, giving the amount of each, if all sizes are not on hand.

"Not the latest" to be used only when goods are not entirely out of date.

"Regular price should be" or "Would be" or "Made to sell for" are phrases used when goods are advertised that were bought below the market price.

"Seconds" or "Run of the mill" should always be used in an advertisement of such goods.

"Sold elsewhere at" is misleading and therefore not accepted.

"Special," "Special price" or "Special sale" must be complied with literally. Price in each instance must be below regular.

"The latest," "The newest" must express absolute truth.

"Usually sold for" does not refer to competitors' prices but to the store's own and means the same as regular price.

"Value" is another meaningless word because of over-use. It as also difficult to judge the exact value of any particular article.

"Width of merchandise" should only be used in stating width as it is at that time; not as it was before bleaching or shrinking.

"Worth up to" is forbidden because it allows for too much misrepresentation. Lowest as well as highest price must be stated.

These are simple rules of precaution, but they no doubt account in no small degree for a store's remarkable following.

---

## HEAVY CUTLERY DUTY TO AUSTRALIA

The expected revision of the tariff laws of the British Empire has set in with the introduction of a new tariff law in Australia. This, among others, proposes to impose a heavy additional duty upon the import of cutlery made outside the English Dominions. While foreign razors were subject to an import duty of 20 per cent ad valorem in the past and the same duty was imposed upon the import of table cutlery the new tariff prescribes an import duty of 25 per cent up on razors and a sliding scale for table cutlery, starting from 25 per cent up to 50 per cent.

Against this considerable increase in the duties the old rate of 10 per cent ad valorem is retained in the case of British made razors. while table cutlery of British origin will be admitted at rates from 10 to 35 per cent. American cutlery exporters are viewing with grave concern this additional imposition upon the import of American cutlery as against British made cutlery and fear that it will affect seriously the growing exports of American cutlery to Australia.

These amounted during March of this year to $31,000 approximately and Australia had taken well to American made cutlery during the last few years. It is pointed out that to sell American razors, for instance, in competition to English razors in Australia in the future the American article has to overcome a handicap of 15 per cent additional cost.

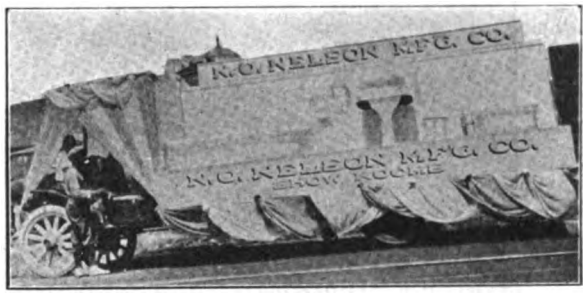
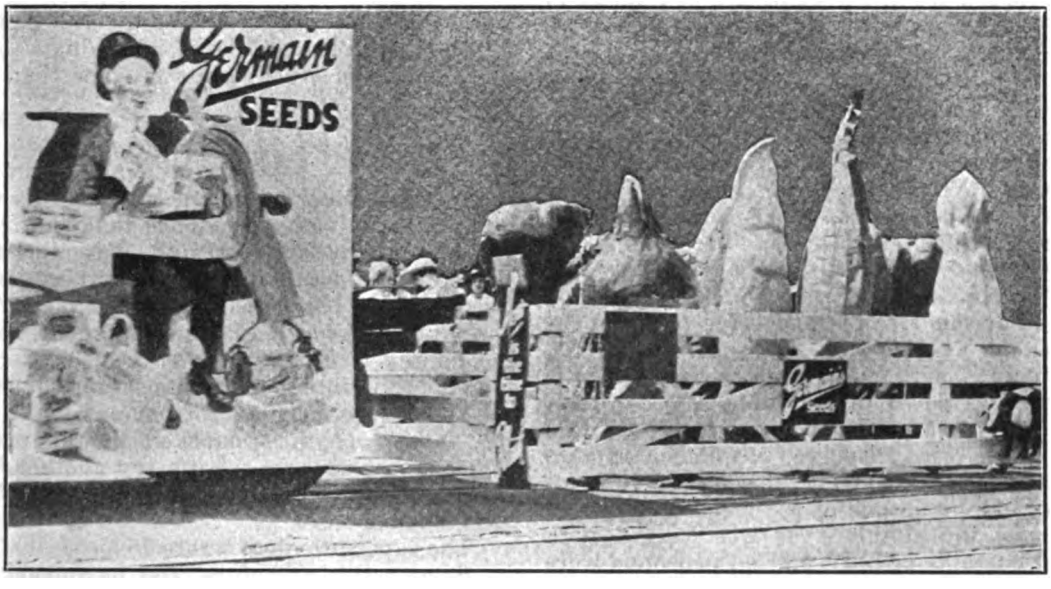
# Some Moving Displays That Moved Goods



**Suggestions Merchants Can Adopt in Their Own Communities**

A YEAR ago, during a big industrial parade in Los Angeles, hundreds of participants marched down the streets singing the official industrial song:

"Keep the smoke stacks smoking, every stoker stoking,
Now the boys are coming home, work can't be slack.
Start new wheels ahumming, send new drummers drumming—
Turn your pockets inside out—it will all come back."



That challenge was gloriously answered in a huge pageant of over 400 floats of various industries that passed between densely packed curbs recently.

Just what it meant, reduced to figures, was that Los Angeles has over 2700 industrial establishments, which manufactures more than one thousand varieties of products. Also that in the last six months this city has manufactured articles valued at $618,000,000—an increase of 60 per cent over that of 1918. It is no wonder that the faces of the thousands of boys and girls, men and women who rode or marched wore "the smile that won't come off," for it meant that never in the history of the country have the workers and manufacturers been so happy and prosperous.

**A large percentage of hardware merchants handle plumbing goods, and it doesn't require a great deal of trouble to fix up a plumbing display in any celebration in which you participate in your home community.**

The parade this year was headed by Gov. Stephens—and he recalled the fact that this was the second industrial parade in Los Angeles in which he had ridden—the other being just twenty-five years ago, at which time he was a salesman for M. A. Newmark & Co., wholesale grocers of Los Angeles.

**WHY NOT AN ANIMATED VEGETABLE EXHIBIT?**

This is a suggestion which live hardware merchants will be quick to adopt. Such exhibits could be made in spring, summer or fall, and it is not even necessary to wait until a celebration or a parade takes place in order to utilize it. An animated vegetable window display, or clerks dressed up as animated vegetables, featuring some goods on certain special days, would be sure to attract attention. It is not necessary that you even sell garden seeds, although most hardware merchants do. If you handle the goods which are used in gardening and in harvesting crops, you can easily make up an animated vegetable display for your window or store which will not fail to attract more than passing interest. In this particular display the animated vegetables walked in a parade, fenced in by a barnyard fence and aroused much enthusiasm.

Digitized by Google

You can often play upon the goods which you sell, featuring some historical, biblical, or even local event. What is more proper than Samson Tires should be featured by a display, picturing the well known biblical character?

**Hardware Industries Represented**

Among the hundreds of floats in the different sections of the 1920 parade there were a number of special interest to the hardware men, and among these were those of the N. O. Nelson Mfg. Co., whose float was divided into two sections, each of which showed a tiled bathroom, with all the tubs, seats, urinals and stationary washstands. Seated in the big white bath tub, with bare head and shoulders in view, was a very black little Negro—who showed in startling contrast to his white surroundings.

Germain's had a display that called instant attention to their garden seeds and implements. An auto was rigged up with large lithographs—an enlargement of the cover of their catalogue—and behind it a trailer, showing a garden fence on wheels. Within this garden marched a wierd procession of vegetables—corn, beans, radishes, tomatoes, onions, carrots, etc.—each being hollow, with a boy inside. It was a vivid presentation of their slogan "Grow Your Own."

The Samson Tire Co. had three floats in the parade, the most notable one showing the Hebrew temple, with Samson—a model of heroic size—pulling down the pillars. Another float showed an automobile equipped with Samson tires, and a third displayed a number of auto accessories. This concern also had a very attractive exhibit in one of the large windows of Desmonds, the clothier. It was backed with pleated curtains of buff, and on pedestals were shown tires of red, white and blue, respectively. Other auto accessories were strewn about, and a card declared: "First Tire Company on the Pacific Coast."

---

Rowe & Knutson at Hamilton, North Dakota, will continue the former business of D. H. Kippen. A stock of furniture, hardware and automobile accessories will be maintained.

The man who buys goods at an extortionate price is as guilty of profiteering as the man who sells at that price. Get your money's worth

---

Selling methods that comprise merely handing out the goods or saying, "We're out of those goods today," are too crude to be classified as salesmanship.

---

Life is a network of relations, and whether those relations shall be friendly or otherwise, depends upon the ability of individuals to look at things from other points of view than their own.

---

## YOU CAN'T FOOL 'UM

A school superintendent, on one of his visits, was complaining to a teacher that children of the present day are so stupid, it is almost useless to attempt to teach them anything.

Said he, "I'll show you what I mean."

Supt.—"Johnny, give me a number."

Johnny—"58."

The superintendent wrote 85 on the board.

Silence—no comment from anyone.

"You see," he remarked to the teacher, "they don't observe. Let's try another."

Supt.—"Thomas, you give a number."

Thomas—"57."

The superintendent wrote 75.

Same result as before, and he remarked to the school teacher, "It is deplorable, such a lack of perception, dense stupidity. It is disheartening."

Spying red-headed, freckled-faced, fidgety little Tim O'Brien, he said, "My boy, you give me a number."

Tim—"Theventy-theven, you darned fool, thee if you can turn that around."

# Judicial Understanding of a Merchant's Problems

FEDERAL Judge Lewis at Pueblo, Colo., recently handed down a decision granting in the case of 13 retailers of Denver a temporary injunction prohibiting submission of alledged "profiteering" cases to the grand jury, and staying prosecution of any cases arising under the Lever act, as amended, to apply to wearing apparel.

Judge Lewis held that a retailer who has purchased goods at some earlier time at a lower price is entitled to the increase in value of his goods, just as anybody else is entitled to an increase in the value of any possession.

The telegram sent by the attorney for the Denver merchants reads:

"In case of Denver merchants Federal Judge at Pueblo issued a temporary injunction which prohibited submission to grand jury or further prosecution of any cases whatsoever arising under Lever act as amended. No opinion was filed but such an unqualified injunction could only have been issued upon the theory that the act as amended insofar, at least as it relates to wearing apparel, is wholly invalid.

"In any event it is certain that the Federal Judge here is thoroughly convinced that no indictment will lie and no prosecution can be maintained based upon the charge that the difference between actual original cost of the specific article and the sale price thereof is excessive.

"Judge Lewis held distinctly and emphatically that a merchant is entitled to the benefit of increment in value occurring while the article is in his stock and may sell the same at a fair profit based upon replacement cost at the time of sale.

"During the hearing, the court, commenting upon this phase of the question, among other things said, 'I don't know whether the district attorney has in mind the theory attributed to him in argument by Mr. Dorsey or not, that is to say, that if a merchant has two bills of goods the earlier one bought at a cost of one-half of what the later one cost that he would keep them segregated and sell each purchase on a basis of profit corresponding to its cost price. I have no doubt that if he has that theory he is in error and can tell the grand jury so, if I have occasion to instruct them on that subject.

" 'I think a merchant, as well as others, is entitled to the increased value by reason of the rise of goods on the market. The question for determination is whether or not the selling price at the time of the sale was excessive and unreasonable over and above its then value. Any other theory would appear to me to lead to and serve wrong results even aside from his right to that at the time in accordance with its value.

" 'Such a theory would require a man whose stock of goods had cost him almost nothing to practically give them away if you keep in mind what they were reasonably worth on the market. Indeed, I can conceive of a case where a stock of goods might be a gift from a father to a son and would not cost the son anything. Certainly he would not say that the son had the goods just for the expense of handling the stock and some nominal profit and that anything over that would be profiteering.

" 'Again, when the court's attention was called to the undenied allegation of the bill and to the district attorney's admission that he intended to seek indictments upon the theory that the profit as based upon original cost of specific articles was excessive and therefore the price unreasonable without regard to present value or replacement cost, the court said, 'Well, I can't let him do that. I haven't any hesitation in saying that that is oppressive and not justifiable by this act or any other act and utterly beyond the power of congress to do any such thing. In war time all of these war statutes, even those that took property away, took it only on the value not what it may have cost somebody a year ago or a month ago, but on the value when it was taken.' "

---

## CAN YOUR COMMUNITY DO THIS WELL?

Orange township, in Blackhawk County, Iowa, has risen into nation-wide fame.

And no wonder. Look at the comforts, conveniences and luxuries in the 142 homes of this country township. Run your eye down the record, and see if your own country neighborhood can match it.

142 farm homes in the township.
142 with newspapers and magazines.
125 with libraries—average volumes in owners' homes, 106; in tenant homes, 95.
132 with telephones.
80 with pianos.
79 with automobiles.
76 with vacuum carpet sweepers.
76 with gas or oil stoves.
72 with furnace heat.
68 with power washers.
63 with gas or electric lights.
57 with running water piped in.
55 with refrigerators.
47 with bath rooms.
45 with open-air sleeping porches.
36 with gas or electric irons.
34 with indoor toilets.

These figures appear in a bulletin just issued by the Iowa Agricultural College at Ames.

If your community can't make as good showing as this, it is up to you to do your part in helping to provide them with such as they need for their comfort and pleasure.

## IN COLLECTING INSURANCE, TAKE NOBODY'S WORD BUT THE COMPANY'S

(Copyright by Elton J. Buckley)

I have many times, through these articles, suggested that business men ought never to forget that in matters connected with their fire insurance, they should never take anybody's word but the company's. I have also reiterated this to my own clients many, many times, but again and again instances occur which show that business men are at no point of their business more careless than they are at this point of getting things pertaining to their insurance done that have to be done for their own protection.

Lying before me at this minute is the report of a case which beautifully illustrates this. A retail dealer in a small city had a fire which destroyed most of his stock and fixtures. There was a chap in the town, a typical local insurance agent, who had placed all his insurance, and the retailer relied upon him absolutely to see that everything was right. Apparently he had never read a word of any of his policies, but depended on the agent to keep him straight.

This retailer carried plenty of fire insurance to cover his loss, and a day or two after the fire he dropped into the agent's office and told him about the fire. "I told him," he says, "about what I lost; and he wrote it down and said all right, you go home and do nothing until I have an answer from the company. When I have an answer from the company I will let you know."

The merchant heard nothing and several times more got in touch with the agent, each time receiving the same answer.

Under the terms of his policy this man was obligated to furnish proofs of loss to the local agent within twenty days and to the company within sixty days. By reason of what the agent told him, he did not do this. The sixty days passed and he had filed no proofs at all. The company then refused to settle because of the absence of proofs and the merchant had to sue. His theory was that "notice to the agent was notice to the company, and the agent's action must be considered to have waived any requirement as to further proof of loss."

The jury gave him a verdict, but the court took it away from him, and when the case was appealed, the highest court said, too, that he wasn't entitled to recover anything. It expressed regret that it felt obliged to decide this way, but said that the case was clear. The terms of the policy were plain, they had not been complied with, there was no good reason for the non-compliance and the company had not waived its right to object. Therefore it was not obliged to pay the insurance. I reproduce a part of the court's opinion and I hope every reader hereof will read it twice:

The conduct of the agent was such as to make the plaintiff believe that nothing further was required of him until the agent sent word. This court, however, has repeatedly held that such verbal promises do not release the insured from the terms of the policy. It is not contended by the plaintiff that he ever had any correspondence with the company at its home office or that he ever saw or spoke to any officer, general agent, adjuster or other person specially delegated to adjust and settle his loss. To excuse his own non-performance of the plainly expressed covenants of his contract the insured relies solely upon a verbal promise of the local agent that he would do whatever was necessary and that the insured need do nothing. There was no agreement of any kind indorsed on the policy to in any way vary its terms and no attempt made to prove that the powers of the agent conferred on him by the company, were other or greater than those usually possessed by the local soliciting agents of insurance companies. If the insured, under such circumstances, chose to rely on the voluntary promise of the local agent as his warrant for expunging from his contract some of its important provisions and ignoring the warnings therein given against such attempts to alter or waive the terms of the writing on which his claim is founded, he placed himself in a position where, if deceived or lulled into security it was not by any act of the company, but by trusting to the mere opinion of one who had no authority to bind the company by any such expression.

I have a pretty poor opinion of an insurance company that would take a position like this, but nevertheless they can take it under the law if they wish to, and always get away with it. I also have a pretty poor opinion of an insurance agent so ignorant as to betray his customer into such a situation, but I repeat, it is the law, and there is only one way to get around it. First know what is in your policy and then comply with it. At least, go to your agent and say, "I want you to tell me what I have to do under my policy in order to collect my insurance." Do that at the very least, and never take his word that this or that isn't necessary, "I'll attend to it for you." Do it yourself—always.

---

## COSMOPOLITAN CALIFORNIA

A Missouri subscriber contributes this:

The Californian gets up at the alarm of a Connecticut clock; buttons his Chicago suspenders to Detroit overalls; washes his face with Cincinnati soap in a Pennsylvania basin; wipes on a Rhode Island towel; sits up to a Grand Rapids table; eats Kansas City meat and Minneapolis flour with Idaho potatoes cooked with Nebraska lard on a St. Louis stove, burning Wyoming coal; puts a New York bridle on a Colorado broncho, fed with Iowa corn; plows ten acres of land (covered with Ohio mortgages) with an Eastern plow. When bedtime comes he reads a prayer written in Jerusalem; crawls under a blanket made in Jew Jersey, only to be kept awake by fleas—the product of his own state.

Here is a chance for some of our California subscribers to "come back" at this.

---

"Think BIG and your needs will grow,
Think small and you'll fall behind.
Think that you CAN, and you will;
It's all in your state of mind."

## WHAT ABOUT YOUR STORE'S BIRTHDAY?

A merchant may forget his own birthday, but he misses a great merchandising opportunity if he fails to celebrate his store's anniversary.

It is just as applicable to dealers in hardware, house furnishings, auto accessories, as any other line.

It does not matter if you have allowed your store's previous birthdays to go by unheralded and unsung, take care of the birthdays to come.

According to W. R. Hotchkin, who made a great reputation as Advertising Manager for Wanamaker's and later for Gimbel's, "no other occasion all the year round presents so many valuable possibilities as the "Anniversary event". Nor does it make very much difference whether the birthday to be celebrated happens to be the first or the fifty-first.

Naturally, the store which has been in business a long time ought to have attained a greater measure of success than a younger establishment, but as the significance of a Birthday Sale lies in the fact that it offers the store in question an opportunity to reciprocate to the public for the patronage it has enjoyed in the year which has just passed, it matters very little which particular milestone in the store's career is about to be reached.

Most of the bigger stores make capital out of their birthdays, but the smaller merchant is too apt to pursue the even tenor of his way with little to distinguish one day's business from another's.

It is not necessary for a small retailer to stage an elaborate parade or to take big space in the daily newspapers in order to announce his coming anniversary. All the preliminary publicity required can be satisfactorialy secured through a well-worded, neatly-printed circular letter or card sent out a day or two before the event to the store's regular customers as well as to a selected list of prospects. The decoration of the store itself and the effective appeal of a few "Birthday Bargains" in a well-dressed window may be relied upon to draw the trade of the casual passer-by.

An appropriate feature which proved successful in a store celebrating its 14th anniversary was a 14c sale. All prices were in terms of 14c—14c, $1.14, $2.14; $3.14, etc.

Very often a manufacturer or jobber can be induced to quote a special price on a number to be featured at your Birthday Sale, but care should be taken to offer only first-class merchandise on these events. When your customers remember your birthday, you want them to remember it kindly.

---

Make your store look bright from the outside, but not so bright that it will be the lights that will attract attention rather than the store or the goods.

## OF INTEREST TO OUR CALIFORNIA READERS

California dealers handling guns, ammunition and fishing tackle will be interested in the following resolution adopted by the California Fish and Game Commission at its last meeting, making changes in the executive office by discharging Carl Westerfeld and appointing in his place Charles A. Vogelsang, who formerly held a similar position, and has taken a constant interest in fish and game affairs for over twenty years in this state.

As most sporting goods houses have considerable business relations with the Fish and Game Commission through the handling of hunting and angling licenses, particularly in Southern California, where the "commission of 10 per cent to actual retailers" system was inaugurated by Commissioner M. J. Connell, the trade will probably continue to watch the operations of that board more closely than in other states where this business relation does not exist.

The full text of the resolution reads as follows:

Whereas, charges reflecting upon the integrity of two of the members of the Board of Fish and Game Commission, namely, M. J. Connell and F. M. Newbert, have been presented to the governor of the state by the executive secretary of the board, Carl Westerfeld; and,

Whereas, the falsity of these charges is not only known to the commission but has been established by answer and evidence submitted to the governor, and,

Whereas, due and ample time has been given to the executive secretary to substantiate the false charges so by him preferred, and he has absolutely failed to do so, and

Whereas, these charges were preferred by a disgruntled salaried employe of the board, only after his resignation had been demanded, and

Whereas, it is most manifest, such an employe should no longer be in the employ and be paid a salary by the state, therefore,

Resolved, that Carl Westerfeld be and he hereby is immediately discharged from his position as executive secretary of the Fish and Game Commission of the state of California.

---

A successful merchant in Illinois has a set of window signs arranged that he claims do him a world of good. Here they are:

"Do you know any good reason for trading elsewhere? If so, tell us."

"No sale is a sale here unless you are satisfied."

"Your money's worth or your money back."

"We aim to please. Is our aim true?"

"You are our guest."

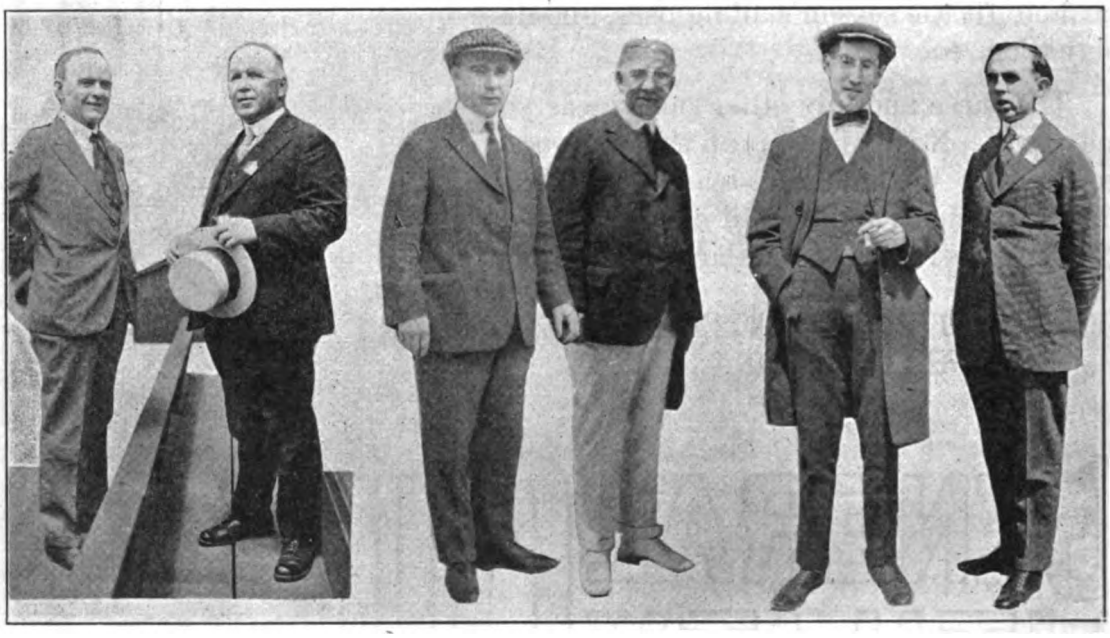
# Accessory Men In Enthusiastic Convention

ANY trade convention that involves the attendance of almost 1000 persons is of national importance and cannot help but make its impression in commercial history.

Last month automobile accessory manufacturers and jobbers from all over the United States gathered together at Del Monte, California. The men from East of the mountains with their wives and families traveled on special trains, under the direction of the Automotive Equipment Association's genial and competent commissioner, Wm. M. Webster, and his equally genial and efficient assistant, Geo. Fritz.

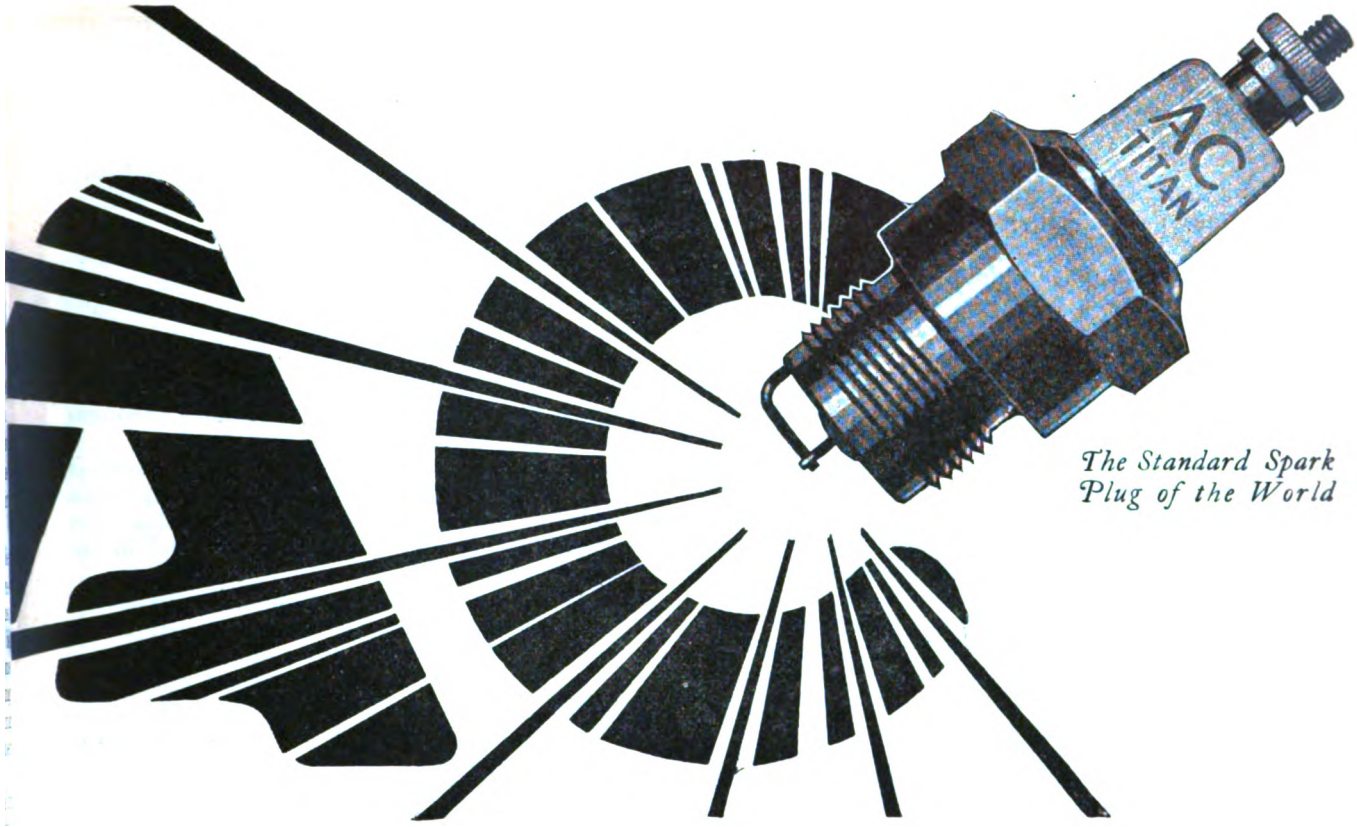
The Jobbers and Manufacturers' representatives of the Pacific Coast were present in large numbers, so that Del Monte was a busy hive of accessory bees for the week. The wives of the trade were there, too, and these women showed themselves interested and apt students of the accessory business.



Problems connected with the industry were considered from all angles, although the social features of the convention were not neglected. There was a tennis tournament under the direction of B. M. Ash of New York, a golf tournament under the direction of P. H. Lyon of San Francisco, motor trips over the Seventeen Mile Drive for all present, and a boat ride on San Francisco Bay, given by the California Jobbers.

One of the strongest features of the Association is the social feature in connection with its conventions. The expenses of delegates are paid by the Association by refunds from the National dues. Thus a representative group of men always attends every convention, and the leaders of the trade come to know each other. To be a delegate, one must be a member of his firm.

It is not often in any industry that jobbers and manufacturers get together in conventions twice a year, side by side, and work out their mutual problems together.



The Accessory Trade sets a proud example here. Although problems of the industry receive careful consideration at the conventions, perhaps the greatest benefit to the industry is the pleasant friendship and closer associations among the members that grow out of traveling together, living together for a week, playing golf together, and having their meals together in family parties.

During the deliberations of the convention questions and gentlemanly discussions arose between the jobbers and manufacturers. Yet how much more fortunately for the industry and how much better these questions could be settled with the parties right together, rather than in separate conventions, by factions.

On the left Secretary Robert W. Martland of the California Automobile Trade Association is proudly smiling while President R. R. Englehart of the Automotive Equipment Association congratulates him on the cooperation which the far western organization has created between manufacturers, jobbers and the trade. We are fortunate in illustrating one of the effects of the Convention when Chas. F. Wright of Ballou & Wright of Portland, Oregon, and Harry Warner of Marshall-Wells Co., Portland, Oregon, held hands and forgot all jobbing rivalries. With the cigar and straightforward expression is Lincoln T. Kauffmann, President of the Auto Leather Mfg. Co., Arlington, N. J. At the extreme right is Geo. H. Treviranus, Sales and Advertising Manager of the Gemco Mfg. Company, Milwaukee, Wis. Mr. Treviranus showed his natural gallantry by removing his hat and undergoing a bright sun glare for us. His upright carriage well illustrates his method of doing business and that of the Gemco Company.

*The Standard Spark Plug of the World*

# An Important Notice to Spark Plug Dealers and Users

Through Government disposal, a quantity of AC Aircraft Spark Plugs are being placed on the market, and efforts made to adapt them to general use by means of adapter bushings.

These plugs, being AC made, are of first quality in every respect, and unequaled in the service for which they were designed. In all 'round automobile work, however, for which they were never intended, they develop serious limitations.

This type of AC Plug is specified for high compression duty in aircraft engines. Their shortness of thread and shortness of porcelain insulator will cause them to foul and short circuit rapidly if used in a motor operating at normal speeds and under normal temperatures.

Adapter bushings will not enable aircraft plugs to give the satisfactory service that distinguishes the AC Titan in automobile operation, because the spark will thus be set too far back, leaving a deep pocket between spark gap and combustion chamber.

Assure yourself and your customers the unvarying satisfaction of AC Titan service in motor car use by insisting on the regular AC Spark Plug that is designed and built for the specific duty to which it will be put.

Champion Ignition Company, FLINT, *Michigan*

**Selling Cut Rate Jobbers**

Very naturally, the question of the cut rate supply houses came up and the jobber members of the Association were anxious that manufacturers refuse to sell these houses. The members of the trade in the Northwest advanced a complaint that large jobbing houses further east were in the habit of buying in large quantities and disposing of the surplus outside of their natural territory, notably in the Northwestern States.

On the other hand, manufacturers call to the attention of the jobbing members the fact that too often inferior goods were purchased from illegitimate producers and sold under the reputation or indirectly through the advertising of standard manufacturers.

The old question of terms was of course discussed. We simply touch upon these points in particular, to show how such joint conventions can effectively handle the questions that affect both jobbers and manufacturers.

During the convention the joint sessions are generally held in the morning, whereas in the afternoon the manufacturers and jobbers meet separately. Of course, the committees meet between times, and there are many of them.

**Attitude Toward Hardware Trade**

During the meeting the question of new members came up and the Membership Committee made a particular request to the Association that a broad stand be taken in admitting new members. It seems that in the past jobbers in some localities sometimes resent the admittance of a competitor.

Commissioner Webster and President Englehart joined in urging the Association to be broad-minded in admitting all legitimate jobbers and manufacturers who should apply. By legitimate, of course, the Association refers to those who are engaged in the manufacture and distribution of automobile accessories through the regular standard channels of trade.

In this connection those who have entered the automobile accessory business through the hardware trade would enter a special plea that the Association be equally broad minded in its dealings with hardware men.

Many lines of tools are standard auto accessories and the hardware trade handled these tools long before there was an automobile.

Furthermore, there are heavy buyers of automobile accessories among the jobbers whose institutions have handled hardware lines and distributed through hardware merchants for many, many years. These tool manufacturers and hardware jobbers are, many of them, members of the Automotive Association, and good members. There is no reason in the world but that the best of feeling should prevail between the hardware and the exclusive automobile accessory trade.

**Hardware Stock Includes Accessories**

The hardware jobbers already carry in their

Winter, Summer, Spring and Fall were each in order for the delegates during the week at Del Monte, and the dress of each season was represented. In this group A. C. Riddell at the far left, Western Representative for Van Cleef Brothers and the Barcalo Mfg. Company, is conferring with his new San Francisco Manager, Earl Jones. Beside them is E. C. Hillis, San Francisco Manager for the Electric Appliance Company, prepared for the warmth of summer. The mountains met the sea when W. L. Hunsacker of the Capital Electric Company, Salt Lake City, stood beside B. B. Stimmel of the Times Square Auto Supply Company's San Francisco branch for a picture. On the far right are father and son in the Guthard family. The son, E. C., is President of the E. C. Guthard Company, large manufacturers in the accessory line. C. H. Guthard, Sr., is President for the Northwest Automobile Supply Company at Billings, Montana, and an active distributor of his son's merchandise.

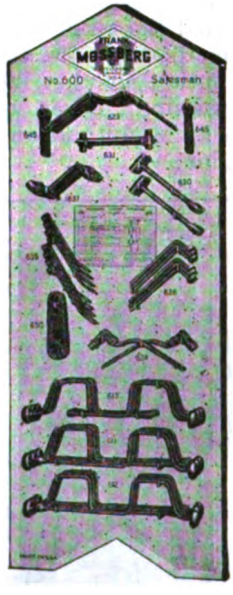
# MOSSBERG

## ALL STEEL
## Wrenches and Tools



## More Sales
## More Satisfied Customers

How often is it necessary to turn away the prospective purchaser of a wrench because you are unable to supply the particular type of wrench desired?

The progressive dealer overcomes this handicap by stocking the Mossberg line of All Steel Wrenches. Its completeness makes the possibility of a sale greater. Whatever the size of nut—whether square or hex, there is a Mossberg wrench to handle it. No matter how unusual the purpose for which the wrench is needed, there is a Mossberg to meet the demand.

The garage man, the motorist, the expert machinist, the marine engineer, each with his particular needs, can find the right wrenches among your Mossberg stock. And he knows that the Mossberg may be relied upon. He is familiar with its reputation for strength and service.

stocks countless items in the accessory line, such as repair tools, enamels, lubricants, and all lines of standard mechanical goods.

**Hardware Dealer is a Natural Merchant**

His sales force has been trained to deal in mechanical goods and the citizens and townspeople who are his customers, the retail buyers, naturally go to the hardware store for tools and for all articles of a mechanical nature. He is equipped by years of training and merchandising study to handle accessories most satisfactorily.

With the coming of the automobile, necessarily garages have come into being and the car owner uses the garage for storage, repair and for service to his car. Yet he still buys his tools and mechanical goods where he always bought them, and it is natural that he should also buy the equipment for his automobile.

The garage man is often poorly situated for selling goods. He is a seller of service. His employes are in overalls and retailing merchandise is often an interruption for them. The wide-awake hardware dealer has everything at hand to handle automobile accessories successfully.

The organization of the hardware jobber is thorough and complete, so that he covers the entire trade. Here is a perfectly natural outlet for automobile accessories.

**Differences in Western Conditions**

It is certain that the manufacturers who attended the recent convention returned to their home plants more alive to the conditions of distribution in the West. The West from the Mississippi River on, particularly from the Rocky Mountains on, is primarily a distributing region.

The Western trade is far separated from the center of supply and from the large manufacturing regions. The jobbers and representatives are important agents in the trade, more important than in any other region. Furthermore, the retail merchants and buying centers are widely scattered, sometimes by great distances.

It has always been our proud conviction that as a rule the Western retail merchant is more wide-awake, thoroughly alive to his opportunities, more aggressive and less guided by old habit than is the eastener.

**Western Merchants Wide Awake**

For this reason the hardware trade of the West is so important an agent and such a vital one in distributing automobile accessories. Undoubtedly the hardware jobbers and dealers will become more and more influential factors in handling the automobile accessory business.

We see no reason for trade jealousy or ill-feeling. Surely the manufacturer wishes to utilize all channels for the distribution of his products. The hardware man does not wish nor claim to handle the entire volume of the automobile accessory industry.

On the other hand, he cannot help taking care of his logical share of the accessory business and this share is very large. The hardware and automobile accessory jobber go side by side to the retail merchant, one to the hardware-accessory man, the other to the garage-accessory man. Often a logical line can be drawn between the garage man selling service and the accessory hardware man, selling merchandise.

**Big Men in Attendance**

After all is said and done, the main feature of the Convention was indeed the importance of the men who attended, the officers and dele-

Some companies were represented by individuals, some by a pair of delegates, and some by considerable parties. Here are two such parties. The Champion Spark Plug group, on the left, includes W. J. Shay, C. B. Clark, G. F. French and A. S. Hicks. In the congenial circle on the right are some of the western delegates, including Harry Warner of Marshall-Wells Co., Portland, Oregon, Mrs. Earl Reynolds, Tacoma, B. Godfrey, manager McKay Norris Mfg. Co., San Francisco, Mrs. Ed Norris, Seattle, R. H. Flanigan of the Walden Worcester San Francisco branch, and Mrs. "And" Reynolds of Tacoma.

gates from the different companies and factories. In very fact, the leading minds of the accessory industry gathered together for a week of conference and companionship, and the business that was done, the friendships that were made, the understandings that were arrived at, can never be estimated.

To begin with, in its president and officers, the association is particularly fortunate. R. R. Englehart was elected president of the Association last fall in Chicago, and at the coming November meeting his term will expire. Mr. Englehart will not claim all credit for the convention, yet he could not have assured his political future more brilliantly than he did at the recent convention. His opening address to the delegates summed up conditions in the industry admirably and gave sound advice for the conduct of both manufacturing and jobbing business during the critical year to come.

Commissioner W. M. Webster surely can take his place with the famous members of the Webster family as a great leader of men. The growth and conduct of the Association during its five years of life is a tribute to his organizing ability and to the respect which he commands from all men in a mighty industry. During the convention itself, he relieved President Englehart of much of the detail and nothing seemed to escape his watchful eye. In fact, Mr. Webster seemed to anticipate questions and situations before they arose.

**A Few of the Notables**

Vice President Stranahan of the Champion Spark Plug Company was an inveterate golfer during the Convention. Mr. Stranahan is one of the present day leaders whose success and achievement is entirely due to his own efforts and who has built his own business from the start. Such an immense organization as that of the Champion Spark Plug Company is almost unthinkable as the handiwork of one man, yet as we understand it, Mr. Stranahan is practically solely responsible.

Although L. P. Halladay of Streator, Illinois, one of the officers of the Association, had made his reservations to attend the sessions, he was unable to make the trip at the last moment. Mr. Halladay is a most faithful member of the Association, but he is also true to his business and he is one of those men who feels that highest service to the industry can sometimes be manifested by keeping the wheels of industry running. The L. P. Halladay Company, however, was ably represented by Dean L. Moberley and W. J. Heineke, Sales Chiefs.

One of the largest and strongest delegations representing a single factory was that from Black & Decker Mfg. Company at Baltimore, Maryland. The party included Mr. and Mrs. R. G. Ames, Mr. and Mrs. R. W. Proctor and Mr. and Mrs. S. D. Black. We shall have more to say of this splendid institution in our next issue.

One of the notable features of the Convention was the opportunity offered to accessory manufacturers to confer with their western representatives. On the left S. F. Beatty of the John T. Rowntree Company is characteristically with T. H. Van Horn of the Harvey Spring and Forging Company, Racine, Wisconsin. In the center is Thomas M. Gardiner, active sales representative for the Boyle Mfg. Company at Los Angeles. On the right is Geo. H. Wilkins of the Keystone Reamer and Tool Company, Millersburg, Pa., with Mrs. Wilkins and Geo. T. Sprake of the Sprake Sales Company, western sales representative.

SIX WALDEN-WORCESTER BOOSTERS

This group represents the happy members of the Walden-Worcester family, including Mr. and Mrs. Lyman Bellows, F. H. Bellows, John Craig, L. A. Raasch and Dick Flanagan. Walden-Worcester left a lasting impression on the delegates by distributing packs of cards, as well as creating packs of congenial good fun.

J. A. Knight of the J. & B. Mfg. Company of Pittsfield, Massachusetts, was without doubt the most active delegate at the Convention. Before the session was over there was no one within miles of Del Monte who did not know Mr. Knight and who had not enjoyed his personality. He entertained the delegates with sleight of hand in the evening, he distributed a souvenir gaming board which took the Convention by storm, and when he could find nothing better to do he borrowed a star from the local police and proceeded to institute a reign of terror.

The Canadian Fairbanks-Morse Company, of Montreal, Canada, is a strong and valuable member of the Association and largely through the fine representation of A. J. Hopkins. The Fairbanks-Morse Company are important accessory distributors in Canada and Mr. Hopkins is high in counsel, especially in buying.

### Mixing Vacation and Business

C. R. Swisshelm of the Crescent Tool Company of Jamestown, New York, is another strong member of the Association who had to cancel his reservations at the last moment. There are so many hours between Jamestown and Del Monte and manufacturing conditions are so critical that it is small wonder that some of the big men of the industry could not leave their desks..

H. B. Burlow, sales manager for Templeton, Kenley & Company of Chicago, has had a mighty responsibility on his shoulders in building up the sales department for the company with which he is connected. It is a long time since he has had a vacation and he took advantage of the opportunity offered by the Convention to spend an extra week on the California Beaches before his return to Chicago.

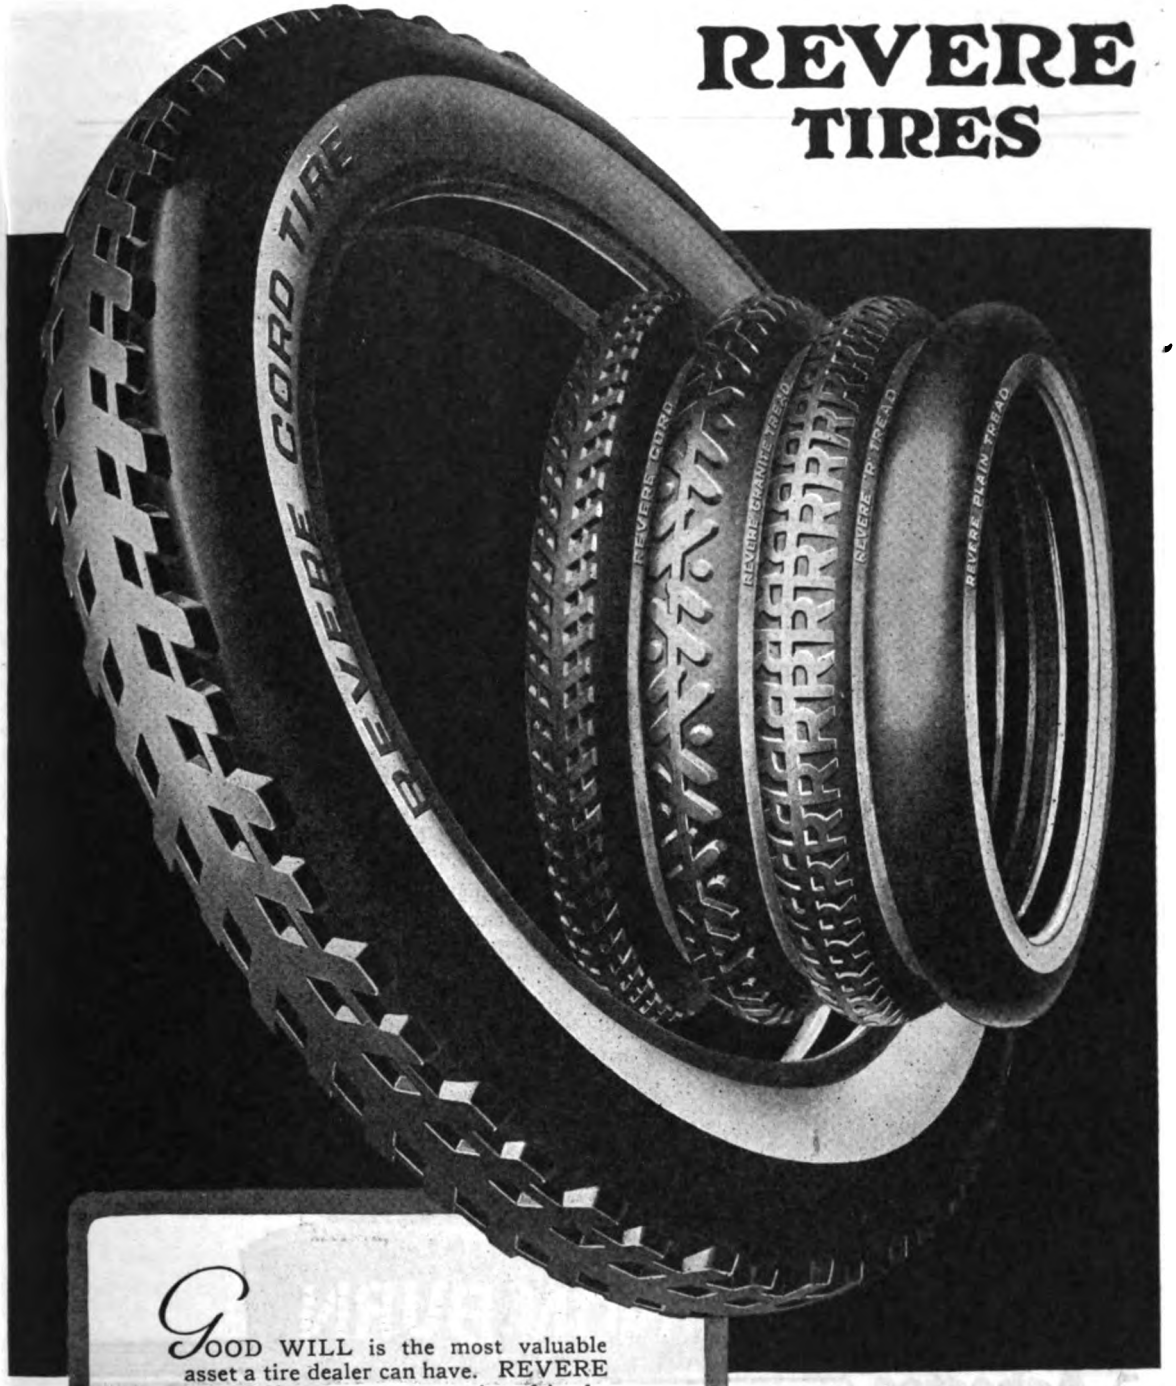
MANUFACTURERS IN THEIR EASY MOMENTS

All of the delegates took full advantage of the opportunities which Del Monte offered for rest and relaxation. Fenton Lawson of the F. H. Lawson Mfg. Co., Cincinnati, strolled on the porch with his newspaper. J. E. Duffield of the New Era Spring & Specialty Co. was faithful to the tennis courts. George Bouthinon, the gaming Frenchman of the Spencer Metal Products Co., Spencer, Ohio, was ready for all sports in all forms, at all times.

H. E. Duffield of the New Era Spring & Specialty Company proved to the delegates that business can be mixed with pleasure. As a side interest he was in charge of the tennis tournament. He was also a most interested and invaluable member of the Association committees and a leader in convention work. Mr. Duffield is one of the men who did not take the Convention just as a vacation, and yet he returned from it refreshed.

We could go on indefinitely mentioning men who went to make up the strength of the Convention. In fact, there is no logical place to stop.

### Far Western Jobbers as Hosts



Among the far western jobbers represented, Chanslor and Lyon perhaps led with the largest number of delegates. Weinstock-Nichols were, of course, represented by both Mr. Weinstock and Mr. Nichols. C. C. Monteen, department chief for automobile accessories and electrical goods, represented Baker Hamilton & Pacific.

Many other jobbers, including such well-known and progressive institutions as McCoy Motor Supply Co., Electric Appliance Co., Beckley, Ralston & Co., Latham Davis & Co., and others, did their full share in the work of the Convention, as well as providing for the entertainment of the guests.

They added to the reputation of the West as men and institutions who know how, and we

# *Selling the idea*
## *to the motorist*
### *through Brake Lining*

IN your capacity as technical advisor to the motorist, you have an opportunity to profit by the economy idea.

Take brake lining, for instance—you know one big feature of Johns-Manville Non-Burn Asbestos Brake Lining is economy.

Economy because Johns-Manville Non-Burn is made of Asbestos—the only material that is fit to stand the terrific heat and grinding wear of braking service.

Economy—not only in purchase price, but for the longest service per dollar that any lining can give under any conditions.

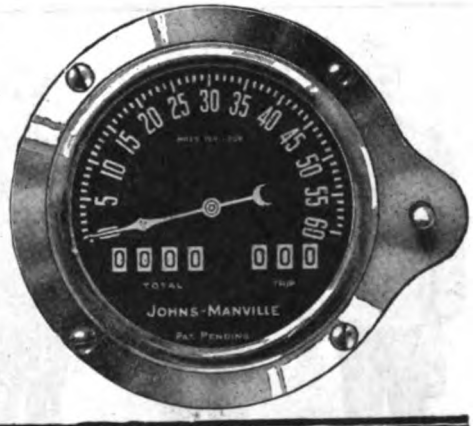
Play up this economy idea—it's a fact—backed by Non-Burn—the worthy representative of Johns-Manville Asbestos in the Automotive Field.

And as to profit—ask your jobber to show you what others, who handle Johns-Manville Non-Burn, are doing right now.

Digitized by Google

# of economy
## at a profit

### and Speedometers



NO matter how good a guesser a motorist is, he can't tell how many miles he rides for a dollar unless he has a speedometer.

Tell him so. Show him why he needs a Johns-Manville Speedometer on his Ford car to keep track of expenses, to check the speed and know the distance traveled.

Sell him the economy idea in a Johns-Manville Speedometer. Go after the Ford owners especially. The Johns-Manville Speedometer for the new Fords can be quickly attached to the instrument board—it's made to fit exactly. Mechanically it's a precision instrument,—yet a simple one, without a single unnecessary part. Even the gear elbow is replaced by a gentle curve in the cased drive shaft.

You certainly can talk economy to the man with a Ford,—and there's real profit in it for you.

Our Jobber-Dealer Sales Policy assures you real trade protection. Write for details.

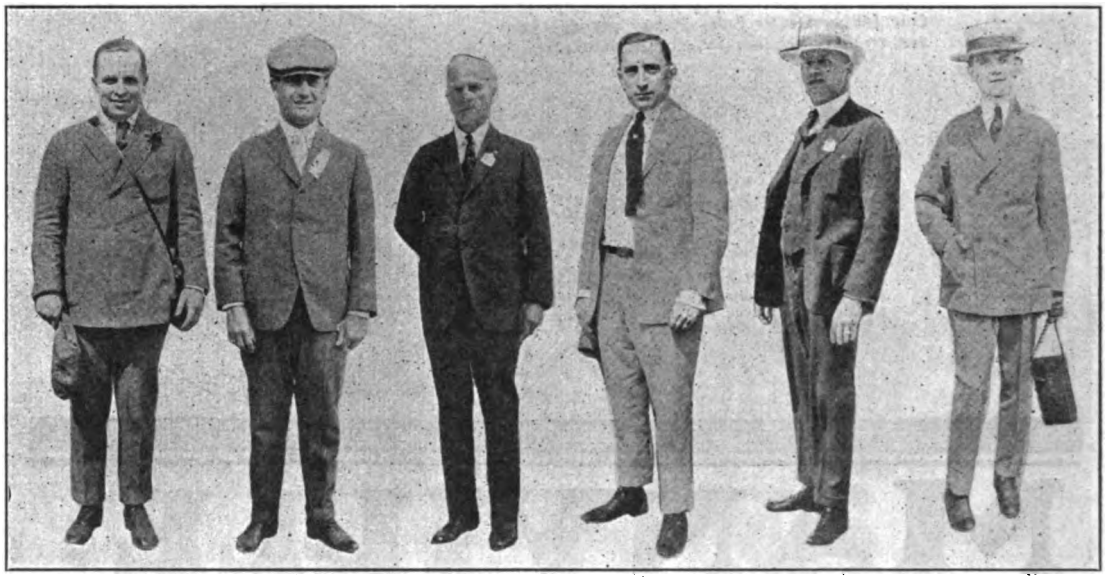
## EQUIPMENT

Digitized by Google

can only regret that a number of snap shots taken by our photograhper were either out of focus or these men were so active it was impossible to take a moving picture of them.

From the Northwest, Chas. F. Wright of Ballou & Wright of Portland perhaps headed the delegation, but along with him were such men as Harry Warner, automobile accessory man from Marshall-Wells, both Reynolds & Reynolds of Tacoma, and representatives of such institutions as Child, Churchill & Day from Spokane and some of the larger buyers from Seattle. The Sale Lake jobbing trade was ably represented by W. L. Hunsacker of the Capital Electric Co. and Ned Culver of the Motor Mercantile Company.

Since the far West is particularly a distributing territory, far removed from the manufacturers, factory agents and manufacturers' representatives are most important factors in the western trade. In fact, the leaders of the industry in the far West are perhaps to be found among the group of manufacturers' agents. Among such strong representatives is Norman Cowan, representing the Howe Lamp Company, N. A. Petry & Company and L. P. Halladay & Company. Mr. Cowan was present the entire week and proved himself an able fisherman as well as a finished accessory man.



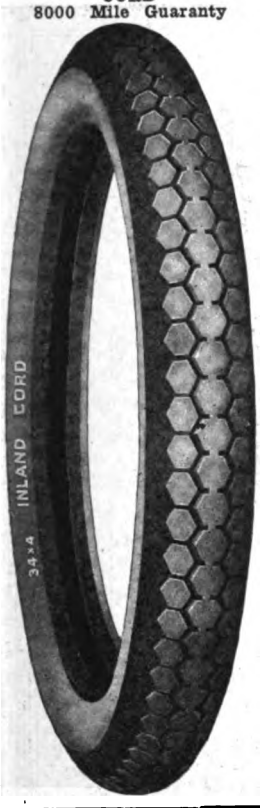
"Rings may come and rings may go, but McQuay-Norris Leak-Proof ring on forever." This is the trade situation for McQuay-Norris Leak-Proof Piston Rings in the West, as summed up by W. B. Godfrey, manager of the San Francisco branch at 1660 Pine Street.

Many conventions need a sheriff in attendance, but not all conventions can boast of two sheriffs. The pair at Del Monte were James R. Shirreffs, Sr. and Jr., of the S. & M. Lamp Company of Los Angeles. It was mutually interesting when these far-western manufacturers met the producers in similar lines from east of the Rocky Mountains. The S. & M. Lamp Co.'s output is handled by the Consolidated Sales Company at San Francisco.

Among other representatives who were there in person or who were represented, might be mentioned the John T. Rowntree Company with S. F. Beatty, C. W. Gause with E. C. Anderson, the Gilbert Sales Company, E. C. Riddell, the Sprake Sales Company with Mr. Sprake. There were so many more that we could not make the report complete if we should try.

From start to finish there was a certain informality at the Convention, particularly as to the program. Nothing was cut and dried. It was one of those rare occasions in life when so many opportunities presented themselves that it was possible to take advantage of only a small part and partially make the rounds.

Although the Automotive Association is only five years old, there is an organization of veterans right within the organization. The Ten Years Club is composed of delegates of those companies who were accessory manufacturers ten years ago. Naturally, the members are more proud than numerous.



BIG MANUFACTURERS WHO STAND ALONE

George S. Everhart is president and proprietor of the Giant Grip Mfg. Co., Oshkosh, Wisconsin, as well as the inventive genius responsible for the company's products. Percival Stern, with his cap on, is president of the Interstate Electric Co., New Orleans, and was chairman of the Convention's important membership committee. W. R. Snyder represented the Frank Rose Mfg. Co. of Hastings, Nebraska. As for H. B. Burlow, sales manager for Templeton-Kenley Co., Chicago, he might just as well have been at Palm Beach as at Del Monte, as far as his spirits and equipment were concerned. O. Albertson, president of Albertson Co., was on the alert at all times and under the guidance of his good western representatives, C. W. and F. N. Jonas. In view of such a goodly representative as C. W. Hauck of the Perkins-Campbell Co. of Cincinnati, our readers will realize how it is that the latter city has become important as an accessory manufacturing point.

Chas. Rubel, president of Chas. Rubel & Company of Washington, D. C., rather took advantage of F. P. Gaul of Gaul, Deer & Shearer Company, Philadelphia, Pennsylvania, when he stood a step above him for our photographer. It is interesting to notice that many of these far eastern travelers across the continent put little confidence in California climate for June.

The Automotive Association should be proud of its several secretaries. We regret sincerely that two attempts at Commissioner Webster were unsuccessful. Of course it was impossible to get all of the secretaries together at one time, yet we were extremely fortunate in catching Chas. P. Hughes and Geo. Fritz. Mr. Hughes is Junior Field Secretary, and Mr. Fritz is National Field Secretary and able assistant to Mr. Webster.

Mr. and Mrs. Noah Van Cleef, of the five Van Cleef Brothers, manufacturers of automobile chemicals and cements at Chicago, Illinois, are to be seen on the extreme right. Mr. Van Cleef was one of the most alert and interested delegates at the Convention, and during his trip to the West he made a thorough, careful, painstaking survey of western conditions. One of the surprises of the Convention was the Van Cleef souvenir tape-measures that were distributed.

## JOY OF SALESMANSHIP

Salesmanship is the marshalled force of Courage, Conviction, Understanding and Determination, bearing the great message which unites the interest of coexistant affairs.

Salesmanship is progress nourished at the breast of Knowledge, guided through life by the unerring hand of Wisdom and Truth, developed in strength and power by Perseverance, and crowned triumphant by honest Endeavor.

When genius is inspired and the vision takes form, it heralds a faith in salesmanship to open anew the treasure chests of the universe. The long weary trail of experiment, the indifferent attitude of the cynic and the uncertainty of success have all held as their star of hope the ultimate employment of the master pilot salesmanship to lead them safely over the shoals of uncertainty. No ship of industry ever embarking, to safely reach its Mecca, has failed to give first heed to the guidance of salesmanship.

Everything in life is dependent upon it. Every dream of achievement unconsciously turns to it, and its success or failure is the wide gap between triumph and defeat. There is no calling in life upon which so much depends! Blot out salesmanship and all is stagnation. Cultivate true salesmanship as a science, eradicate all things that drag this great profession to the level of the wage earner, glorify it as a sculptor, an artist, a thinker, an explorer, a scholar or a scientist glorifies his labors for the mere ambition of creation.

Take pride in your salesmanship and enjoy the thrill felt by the architect who has lived to see the completed structure of his designing and planning.

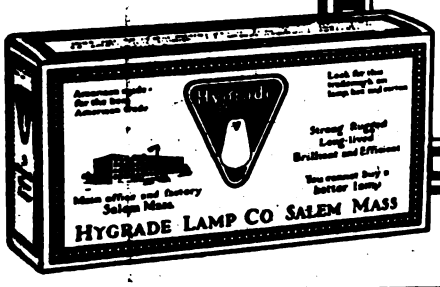
If every salesman would put as much thought and heart into his sales effort as is given the product by its inventor and manufacturer, if every salesman could realize in time that he must know his product as the manufacturer knows it, and be able to expound its merits with that ease and confidence which carries conviction to the consumer, then the great ensemble will be singing together as the morning stars, and salesmanship will in fact be but the joining together of the loose ends of the silken skein that is woven into the perfect pattern of real accomplishment.

Give heed to the hour when men are chosen from the ranks to fill the positions of those who are now guiding our destiny. Give thought to the morrow when opportunities may have vanished. Be a leader of men, be a top-notcher, a quota man whose effort is the standard of achievement. Enter into the spirit of this great calling clothed in the armor of assurance, born of irresistible enthusiasm. Put aside every thought but this one, that somewhere, somehow, you are going to discharge a duty entrusted to your execution, and build a monument to the greatest profession on earth—salesmanship.

We give you a hearty invitation to visit the Hygrade factory and see how Hygrade Lamps are "persistently well made."

## Come to See Us This Summer

When you visit Plymouth this summer, don't forget to come to Salem, too.



In Salem you can see Hawthorne's House of the Seven Gables and many other famous and interesting reminders of our forefathers.

And by contrast, near the foot of Gallows Hill, where the witches were hanged, the modern factory of the Hygrade Lamp Company.

Here Massachusetts workers, with Massachusetts thoroughness and skill, make a complete line of incandescent lamps, which dealers all over the United States are selling in increasing quantities at good profit.

A REPRESENTATIVE GROUP OF MANUFACTURERS

Big John Van Benschoten, sales manager of the Pouvailsmith Corporation at Poughkeepsie, New York, paired off with Western Representative J. Schreyer of San Francisco, California. A. C. Johnson, with the Apex Mfg. Company at Chicago, may not occupy so much space in width, but he makes up for that by the length of his legs. John C. Donnelly of the Multibestos Company of Walpole, Massachusetts, took no chances and carried his overcoat with him. E. M. Eshnaur is "Commercial Ambassador" for the Lockwood Mfg. Company at Kansas City, Missouri. The jaunty gentleman on the extreme right is A. R. Johnson of the Jefferson Electric Company at Chicago.

## DON'T TURN DOWN THE SALESMAN YOU DON'T KNOW

The buyer of a successful store makes it a practice to see every salesman who calls, but he always gives preference to the representative of a house with which he has not previously done business.

"When I was an assistant-buyer, fifteen years ago, I learned a lesson which I have never forgotten.

"My principal function in those days was to save the big boss as much time as possible by turning down persistent salesmen offering merchandise which I knew we did not need. About five o'clock, at the end of a busy day, a card was brought in to me which bore the name of a firm I had never before heard of.

"Tell the gentleman I am too busy to see him today," I directed the office boy.

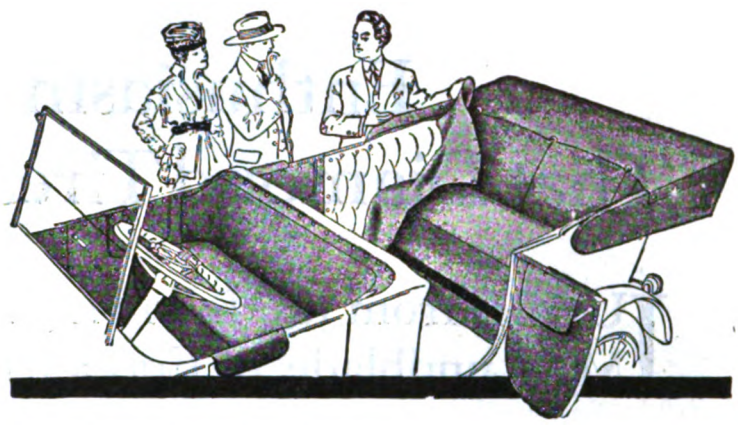
"The Chief overheard me and asked me who it was I was too busy to see. 'It must be a new firm,' I replied. 'At any rate, I've never heard of them, and I know we've never done business with them before.'

"Without replying to me, the Chief stepped to the door and directed the office boy to call back the man who had presented the card. Much to my chagrin, the salesman I had turned down was brought back and ushered into the Chief's private office.

"Ten minutes later, he was ushered out and the Chief invited me in.

"'If you ever want to be a big buyer—like me,' he said, smilingly, never turn down a firm just because you never heard of it. When you turn away a firm whose line you know, you can't lose very much because it would be an easy matter to get in touch with the concern subsequently, if you happen to require any of their merchandise. But when you turn away a salesman without knowing what he has to offer, you run the risk of missing an opportunity you may never be able to recall.

" 'In this case, for instance,' he went on, 'the salesman you turned away without interviewing happened to have the very line I have been looking for. That is just a coincidence, but it is something that is likely to happen at any time. When you're very busy, turn away the salesman you know, but, for Heaven's sake, give a moment to the newcomer.'



"I have often thought that perhaps the Chief gave that salesman an order just to make the lesson impress me more, but certainly I have never forgotten the incident. Many times since, I have made important purchases from salesmen representing firms whose names were strange to me, although I pride myself upon knowing most of the representative houses in our line.

"New firms crop up every day and with them come new opportunities for the careful buyer and no buyer can afford to ignore them.

"That is why you were asked to wait. Whenever two salesmen call on me at once, I always give the preference to the newcomer."

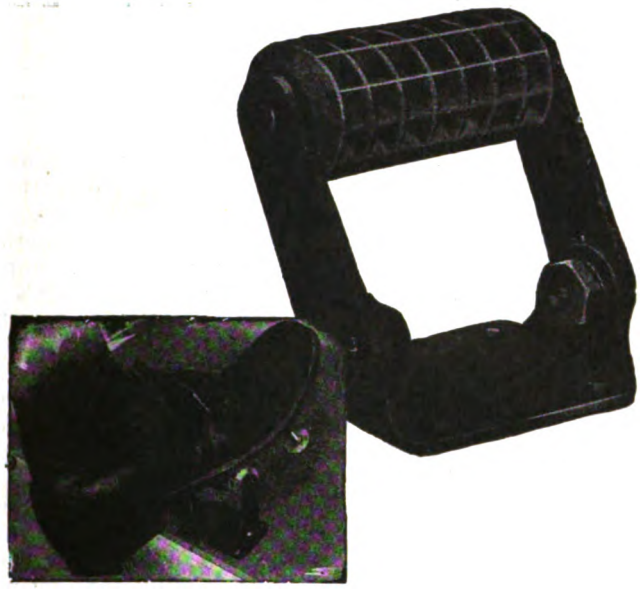
# Enthusiasm That Diamond Tires Evoke

## JUDGE from the following letter from Mr. Lundblade, of Eureka, California:

"My real success began at the time I took on the Diamond line. In a few short weeks I was able to point to a line-up of cars and say with great satisfaction, 'Count the Diamonds.' And those who counted soon realized the growing popularity, and fell quickly into line.

"The reasons for the popularity were not hard to find. First, there was the inherent quality of the tires. The fact that they wore well—that they looked well—that they served the owner for a period usually far beyond the adjustment basis, with a minimum of trouble. Secondly, there was the character of the men behind the goods. The faith they had in the tires they were making. The willingness they evidenced to make good wherever and whenever a fault appeared.

"So my business has grown. Today Diamonds are to be found on more than half the cars in my community. I am making money, building up daily a larger and better business, because I am selling satisfaction—a satisfaction that is made out of quality and confidence.



"Three years ago my capital was very small. Today I am located in my own building which was just recently completed at a cost to me of $40,000."

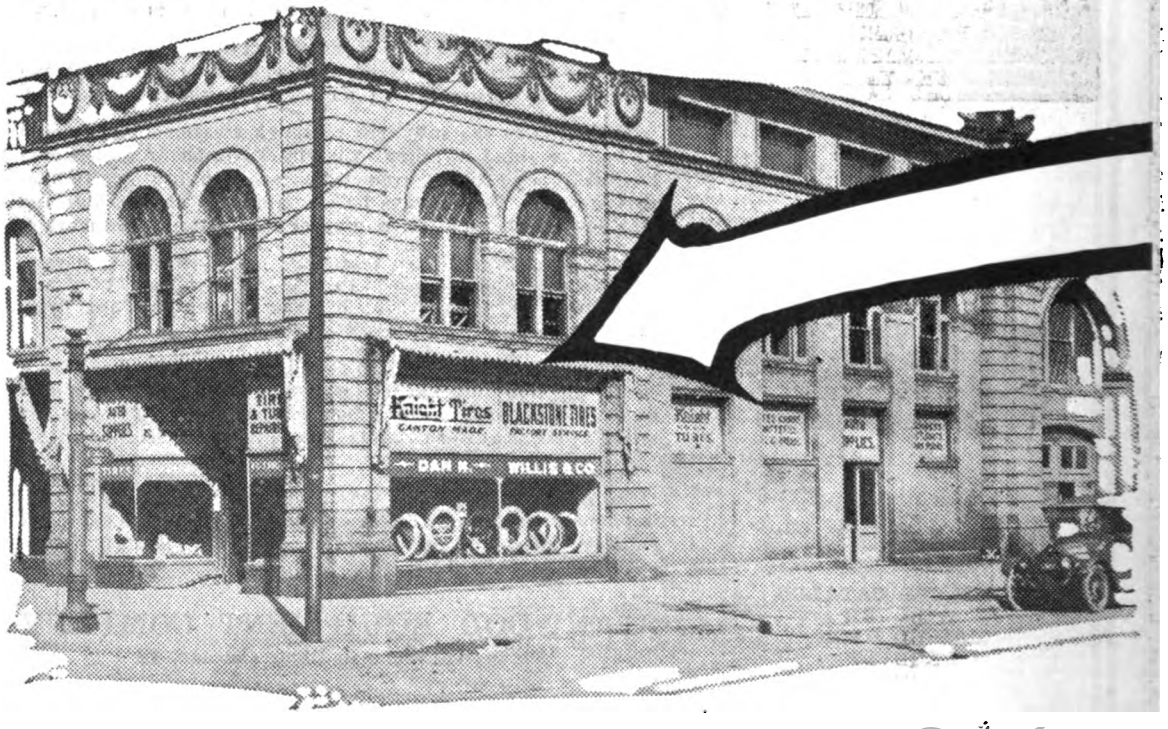
# Dan Wallis Leaves a Good Taste in His Customer's Mouth

(By G. P. Blackiston)

WHEN a man in real business turns a shoe string into comfortable thousands, he is pretty sure to receive a little attention.

When Dan Willis started in the automobile supply business in Canton, Ohio, his working capital approximated $200.00 in real money—and the casual observer, counting the concerns already sharing the visible supply of trade, would have said that Dan's pickings were likely to be exceedingly slim. The prospects were certainly not alluring.

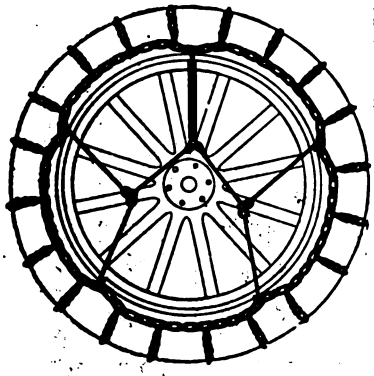
But Dan made good.



It isn't hard to interview Dan. If you happen to drop in you are pretty sure to get a word or two—a sort of natural interest to assure himself that you are not neglected.

He doesn't hang around and try to sell you something, though there is an atmosphere about the place that invites you to linger and buy. There are no "call again" signs, nor any announcement of the "special service rendered," but you leave the store feeling under a sort of pleasant obligation to drop in occasionally, even if you don't want anything.

Every time Dan sold an automobile tire, he put so much of Dan Willis into it that people began to see the light and today thousands swear by the tires he sells. The chief pleasure in buying there is the feeling that whether you want a full new set or just a fifty-cent patch, to hold you over for another run—it's all the same. If there's a different feeling, you'll never discover it.



Dan has a habit of trusting pretty thoroughly to his own judgment. Once convinced of the merit of anything, he isn't slow to bank on his opinion and clear for action. This one characteristic has stamped Dan as one of the most progressive dealers of the city. While Dan is quick to act when he is certain of his ground, he is too wise to risk, by any hasty judgment, the good reputation he has acquired. When a chain company tried to sell Dan a new tow chain to replace the cable he had been selling, he listened with interest to the salesman's story—and ordered a sample.

He put this on his own touring car, for he drives a good deal, and, being of a generous turn, he frequently gives a lift to some stalled motorist. It was in this way that Dan found

HOW EAST MET WEST AND WEST FETED EAST

These two groups were taken on the day that the California Auto Trade Association took the hundreds of delegates over the famous Seventeen Mile Drive with a sumptuous outdoor luncheon at Point Lomas.

The group on the left represents all parts of the country and all phases of the industry, and is therefore thoroughly typical of the Convention. The five men are: A. J. Ludy, Vice President of the Clucker-Hixson Company, New York and Atlanta, Georgia; J. C. Griffiths, Western Representative of the Clucker-Hixson Company, 1019 Santa Fe Avenue, Berkeley, California; Richard A. Crooker of the Allen Auto Specialty Company of New York; T. H. Vincent and L. O. Fortwood of the Entertainment Committee, at Salinas, California.

The group on the right represents the backbone of the Electric Appliance Company as it was represented at the Convention. Sitting down are C. C. Hillis and wife of San Francisco, and in the foreground M. F. Sterritt of Dallas, Texas; standing from left to right are A. Meinema of San Francisco, President of W. W. Lowe of Chicago, and Mrs. Lowe, and C. R. Churchill of New Orleans, one of the most important and active delegates at the Convention.

from experience some important facts about the tow chain. He could more conveniently give a fellow a lift with a tow chain and not soil hands or clothes or even mar the enamel of either car. He naturally recommended the tow chain when he found it so satisfactory. And it has sold readily ever since.

I couldn't help noticing that people drop in to see Dan without any well defined idea of just what they want. They seem to know that Dan knows—so why should they worry.

Most people are willing to spend—providing they get a run for their money. To be "stung" is the "rub." The point is this—even though you buy in some stores you have a sort of sensation that you have lost—that somebody got the best of you. If there's any one feeling you'll never get after buying from Dan Willis, it's this disagreeable sensation of a bad bargain. And if there's any "secret" to Dan's success, that's pretty nearly it. The rest is just plain, hard work.

## ORIGINAL MEANING OF THE WORD TIRE

A thing which ties is a tire—and that is the best explanation the makers of the dictionary give as to the manner in which the word "tire" came into existence.

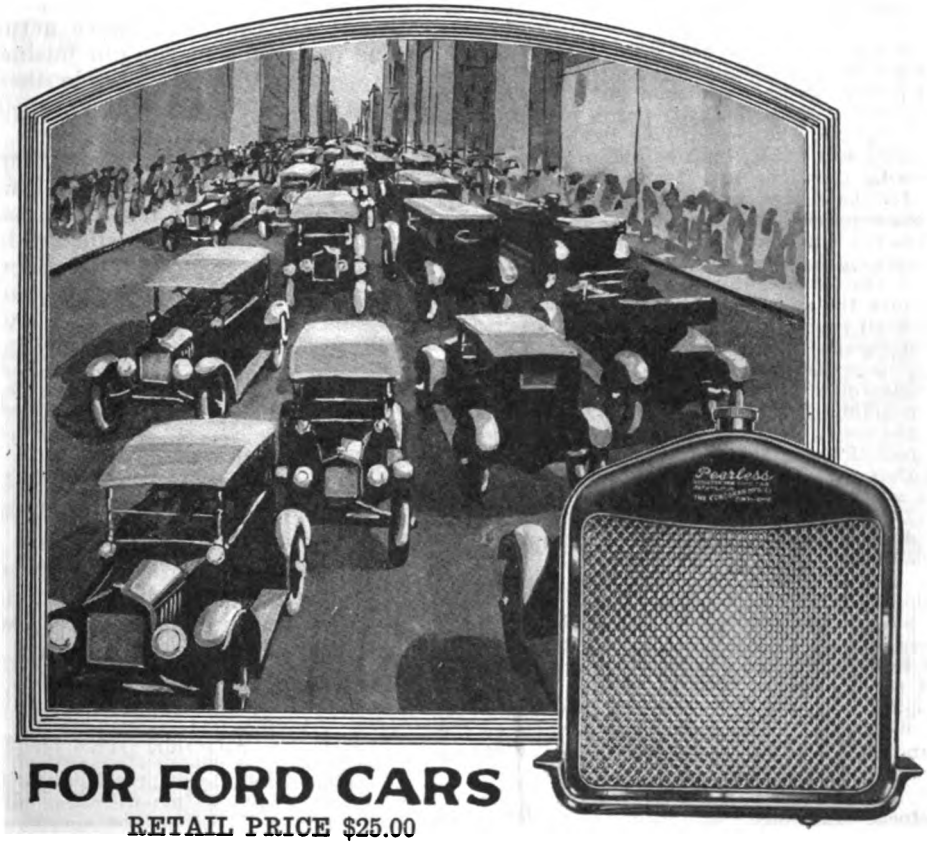
The first purpose of the tire was to tie or bind the wheel together. As time has passed, the original meaning of the word has been lost sight of and now the tire is the part of the wheel which touches the road and stands the wear of travel.

The entrance of American tire firms into the export field has turned gray the hair of many an advertising man who must keep straight in his mind the names by which tires are known in the various foreign countries.

To begin, there are England and her possessions which insist on spelling the word "tyre." No less an authority than England's own Encyclopedia Britannica is on record with the opinion that "this spelling is not now accepted by the best English authorities," yet "tyre" persists everywhere under the British flag except in our neighbor, Canada, where "tire" is correct.

In some of the Spanish-speaking countries, such as Chile and the Argentine, tires are known as "neumaticos." But in Mexico they are "llantas." In still other places where where Spanish is the language, notably Cuba, the correct word is "gomas." In Brazil, where Portuguese is spoken, the name is "pneumaticos."

The French have the short word "pneus" for tires. This is a contraction of pneumatiques. In practically all the Scandinavian countries the Danish word "gummiringer"—rubber ring—is used.



Irwin & Ballard is a new firm at Ainsworth, Nebraska. They purchased the stock and succeeded C. S. Pettit, who has long been a merchant at that place.

## BIG PERCENTAGE OF AUTOMOBILE ACCIDENTS DUE TO IMPROPER HEADLIGHTS

**A. F. Munter Discusses Troublesome Question and Means That Are Being Taken to Eliminate Dangers**

"I do not know that there has been any data compiled to show the exact percentage of automobile accidents that are attributable to improper and glaring headlights," said A. F. Munter of the Norton-Munter Company, factory representatives for the popular Violet Ray Auto Lens. "I do think, however, that such information would be highly interesting and be more effective than any one thing in securing passage and enforcement of a national law bearing on headlight regulation.

"I do know, however, that the insurance companies' statisticians have undeniable figures to prove that fully 25 per cent of all accidents in and around industrial plants are directly attributable to improper lighting.

"This makes a tremendous new field for the efficiency engineer and right now throughout the country a good many of these industrious men of initiative are at work re-arranging the lighting systems of various large industrial plants and constantly at study to develop the most efficient light. And by efficiency in light I mean not only the proper amount and distribution of light, but the color of that light as well and the effect of the whole on the optical nerves of the worker.

"If it is true that 25 per cent of all industrial accidents are due to improper lighting, surely we can set down this percentage as a minimum for accidents that are attributable in automobile driving to improper and glaring headlights. The best driving light for all purposes of safety is a strong light held down close to the road, throwing the light far ahead, giving plenty of side light for the curves, yet, withal, a non-interfering light for the approaching driver and the pedestrian.

"Just as the illuminating engineers in industry and their enterprising brothers in the moving picture world have found that the right proportion of blue in any light will give the nearest approach to a real daylight light, which all recognize as the clearest and easiest on the optical nerves, just so the manufacturers of the Violet Ray Lens have discovered the secret to proper headlight illumination for automobiles.

"By including in the preparation of the glass that goes into the manufacture of this lens just enough blue to counteract the harmful, superfluous glare rays, the manufacturers of Violet Ray are putting out a lens that most nearly approaches the much desired daylight lighting effect. The Violet Ray lens gives an almost daylight driving light and does this without killing any of the useful light.

"This means ease on the optical nerves of the driver—the Violet Ray is the easiest lens on the market to drive behind. The attractive black visor deflects the upward rays to a long, clear, non-interfering road light and the arrangement of the prisms provides extra side light for the curves. The Violet Ray Lens is not only a highly scientific, practical and very successful lens, but is also one of the best looking lenses on the market and adds a touch of distinction to any car on which it is installed."

---

The Hoene Hardware Co., Cottonwood, Idaho, has purchased the stock of the Idaho Outfitting Co., at Winona, Washington. The store will be enlarged and remodeled and will carry a complete line of hardware.

---

The Northwestern trade is mourning the loss of R. I. Morse, head of the Morse Hardware Company, of Bellingham, Washington. For thirty-five years he has been a respected and esteemed pioneer resident, and has done honor and good service to the trade of the Northwest.

## GETTING CUSTOMERS TO MAKE SUGGESTIONS

That there is nothing the average person likes so much as to be asked for advice is the theory on which a New York merchant has built up its business.

"When I first came into this neighborhood," the proprietor said, "I picked out the persons I believed were going to supply my best trade, and I began to play them.

"When a customer came in I would have a little question to put to him or her. In the case of a woman, I would ask her, for instance, about the advisability of putting in a certain line of aluminum ware—ask her what she thought about them and whether she believed we ought to handle them. In the case of a mechanic, I would ask him whether he thought our window display of tools was as attractive as it might be made—and other questions of the same character.

"The result would be that the persons approached would begin to study our store with a new interest. The psychological effect produced was that they were actually taking a hand in helping us run our business. And once they got that impression in their minds they were ours. They would not think of dealing anywhere else than at the store in which they felt they had a sort of proprietary interest.

"We found that the good will created in this way increased our business. Those who took an interest in the store didn't wait to be consulted, but would stop in frequently to tell us of a "good stunt" they had observed in another store or had read about, and it was seldom that a visit of this kind did not result in a sale of something or other to our interested advisor. It is human nature that the man whose advice you ask for, and take, will be more favorably disposed toward you than the man to whom you give advice. That is the way it worked out with us, at any rate."

---

It pays to treat farmers' wives with a lot of consideration—they often control a sale. There's a surprisin' number of wives who are, when first married, a man's treasure, and later develop into a treasurer.

---

## JOHN C. MOORE DIES IN NEW YORK

John C. Moore, vice president of North & Judd Mfg. Co. and director of export sales, passed away at his home in New York City last month, after an extended illness. Mr. Moore recently returned from Cuba, where he went early in January, hoping that a warmer climate would aid him in regaining his health.

Mr. Moore became connected with North & Judd twenty-five years ago and since then has been associated with the concern as a resident manager at the New York office.

At the home office in New Britain he was considered one of the company's most capable executives. During his frequent visits to the factory he made a host of local friends, all of whom will mourn his loss.

NATIONAL PRESIDENT J. M. CAMPBELL

We go to press with this issue before the meeting of the National Retail Hardware Convention at Buffalo, the latter part of June, but advance reports indicate a most enthusiastic and helpful meeting. This convention is attended only by delegates representing various state associations. Its purpose is to coordinate and outline general trade policies. Undoubtedly the delegates will have an excellent account to give of the work in their respective fields. It is the policy of the association to rotate in office. Under Mr. Campbell the association has maintained its previous splendid record and has been inspired by zeal and a desire to be of service that has not been surpassed by any of his predecessors.

## DIXON VICE PRESIDENT RESIGNS

George E. Long, Senior Vice President of the Joseph Dixon Crucible Company, has announced his decision to retire from the office of vice president. Thereby he terminates forty-three years of active and valuable service with this company, beginning in the capacity of a stenographer and advancing to the offices of secretary, treasurer and vice president, respectively.

It is with a mixture of regret and congratulation that the trade receives the announcement of Mr. Long's retirement—regret over the loss of the intimate personal contact with him, and congratulations that in the sunset of life Mr. Long is in a position to enjoy, by whatever method he may choose, a well earned "vacation."

It would be difficult to enumerate in detail the contributions that Mr. Long has made toward the growth of the Dixon Company's business during his service of forty-three years. Mr. Long is recognized as the "Daddy" of Graphite Lubrication, and as the "Father" of Silica-Graphite Paint for protective purposes.

## B-N PISTON PINS FOR ALL CARS

The Burgess-Norton Mfg. Co., of Geneva, Ill., manufacturers of "B-N" automobile parts and BUR-NOR hardware specialties, are extending their line of Piston pins to include all the pins for the more popular cars, about twenty-seven in number.

A stock of pins in standard and oversize will be carried for all models since 1915.

This is a rather new idea, but they say that if a dealer carries pistons and piston rings—why not carry the pins, too, as there is a large demand for them and at present they can only be secured from service stations.

Many jobbers have already placed their orders and the Burgess-Norton Mfg. Co. is going to make the sale of piston pins an easy matter for them, by trade paper and consumer advertising.

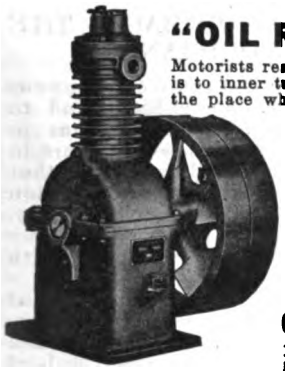
## BEATS-ALL AUTO SPECIALTIES

The coming year is sure to be one of thrirt. For the automobile accessory dealer, this means that those goods which will prolong the life of a car or its parts will be in heavy demand, just as re-soled shoes and re-blocked hats will likewise be popular commodities. The car owner is going to have his tires re-vulcanized. He is also going to grind his valves, repair his own top, put a coat of varnish or enamel on the old car, and patch up the radiator with compound as he never did before.

Under these circumstances, such a line of car economies as that put out by the Auto Specialties Mfg. Co., of Buffalo, N. Y., and announced elsewhere in this issue of the HARDWARE WORLD should prove ready sellers, even to the point of being absolute necessities to the wide-awake merchant who is handling accessories. The company announces its line as the Beats-All Quality Brand, and included in the products of the factories at Buffalo and Fort Erie, Canada, are top and upholstery dressing, lining dye, engine and fender enamel, body varnish, celluloid cement for the broken curtain light, top patches, tube and tire dough and patches, radiator cement, spring lubricant and tire paint.

Among the company's sales representatives are the Chas. A. Dowd Sales Co., 320 Market Street, San Francisco, California; the Rubber Sales Company, 53 West Jackson Boulevard, Chicago, Illinois, and Curry Brothers, 511 Grand Building, Atlanta, Georgia.

---



The activity and extended operations of the Helena Hardware Co. have made it necessary for that institution to double its floor space by the occupation of an adjoining building at Helena, Montana. The two buildings are joined by doors near the front of the store.

---

The Gates Rubber Co. seems to run to straw hats. Here are the three big chiefs of the Denver institution. From left to right they are: C. C. Barnet, Manager Accessory Sales; A. B. Mattingly and M. Mattingly, Special Sales Representatives.

# Farmers and Owners of Cars are Prospects

YOU who have in the past handled vehicles and wagons and have lost that profitable trade to the Motor Vehicle, are in a position to get the old volume and more back in handling "Utility Trailers" and without the necessity of giving service or having an expensive service department as is required where you sell motorized vehicles.

Every farmer in your community is a prospect for a Utility Trailer of some sort. Every motor truck running over your highways is necessarily a prospect for a Utility Trailer, if he is to compete with others using them, they bring truck operating cost down to a point where the profits are satisfactory, and truck operating brought out of the Red Ink.

Utility Trailers are motorless auxiliaries to the truck or passenger automobile, bringing you a clean profit when sold and a profit that is yours, not to be later paid out in shop costs of free service as in motorized vehicles.

We have some good territory open, write us for our proposition to dealers.

## GEORGE W. LEE A LAWYER

A product of the hardware fraternity of the far West, who cut out a big niche for himself in the trade centered around Cleveland, filled the niche and now abandons it for an even larger possibility, is George W. Lee.

Far western friends of Mr. Lee will of course always think of him as a member of the organization of the Union Hardware & Metal Co. of Los Angeles and the Pacific Hardware & Steel Co. of San Francisco. For four years he was with the Los Angeles jobbers, the last half of the time a city salesman. He resigned that position to enter the retail business at San Francisco with the Palace Hardware Co., where he was four or five years a valued member of that organization as buyer and manager of the Builders' Hardware department.

For a short time he was at Portland, Oregon, as buyer and manager of the Pacific Hardware & Steel Co. office there, but was transferred after several years to be manager of the builders' hardware department of the Pacific Company's retail store at San Francisco. When the Pacific Hardware & Steel Co. suspended their retail business seven or eight years ago, Mr. Lee accepted a position with W. Bingham Co., which position he occupied for four years.

Although Mr. Lee's experience with the W. Bingham Co. has meant nothing but mutual success to the company and himself, he has resigned to take up law work in conjunction with real estate brokerage and will be located at 706 Williams Building, Cleveland, Ohio. For the last three years Mr. Lee has been studying law at the Cleveland Law School, taking his degree at the Baldwin Wallace College. He was admitted to practice in the state of Ohio, July 2, 1919.

It is not Mr. Lee's plan, however, to leave the hardware business for the law, but he believes that his legal training will benefit him for an executive position in the hardware world. With his rounded experience in the retail business, in the wholesale business, and finally in the great manufacturing centers connected with the hardware trade, and now with his additional endowment of a legal training, Mr. Lee is admirably fitted to become a leader in the hardware field, and it would not surprise us at all to see him return to the West to become a great factor in the distribution of hardware in connecion with some organization large enough to measure up to his own endowment.

---

Beware of the higher cost of the lower price.

## AUTOMOTIVE ASSOCIATION BACKS THE GOVERNOR OF LOUISIANA!

When the delegates to the Automotive Equipment Association Convention at Del Monte heard read to them the words of Governor Parker of Louisiana in reply to a defiant delegation of union labor leaders in his state, there was such approval and enthusiasm that on motion a telegram of approval and congratulation was sent to Governor Parker by the Convention. Furthermore another telegram was sent to Governor Hobby of Texas for this method of meeting and dealing with union labor defiance is one of Hobby's hobbies also.

As reported in the public press, the labor leaders of Louisiana had assembled for conference with the Governor. There was quibbling, hesitancy and reluctance by the leaders in ordering back to work 8000 members of the metal trades, 2000 carpenters, 600 bread bakers. and 800 coastwise longshoremen. The men were on strike for the closed shop.

In reply Governor Parker declared that he intended to break up the agitation and wipe out the Bolshevists and I. W. W.'s among the laboring classes of New Orleans "if I have to do it myself," he said. The governor showed that his mettle was aroused, and for the first time since becoming governor he displayed the temper that has made him famous.

"I am here to tell you with all the earnestness that is in me if your organization want to go back, and go back as individuals they can do so. If they don't. so help me God, I am going down to New Orleans Monday morning and as governor of this state, I shall do my duty absolutely and fearlessly," he shouted to the assembled labor leaders.

"There will be no closed shop and no temporizing with men who have no complaint to make of wages and hours. As long as I am governor of Louisiana I am going to do what I believe is right in the interest of the people and drive these vipers who are trying to poison the minds of our workingmen from our midst," said the governor.

He declared that he had information that agitators were trying to cause a strike at the great Standard Oil Works, and he wanted those who were seeking to cause the trouble to leave the states, as it would not be good for them to be caught at it.

---

## EVEREADY DAYLO PICTURE CONTEST IN FULL SWING

On June 1st there appeared simultaneously in 50,000 store windows throughout the United States and Canada the big and striking window display for the Eveready Daylo $10,000 Prize Contest.

The focal point of this display is the fascinating picture without a title, which contestants must see before entering their answers. In the foreground and at either side of the window are pictorial colored cutouts, holding the most popular types of Eveready Daylo, a generous display of batteries and lights, and a clever visualization of the amount of the cash prizes in greenbacks. Over all is a card, which reads: "Eveready Daylo Picture Contest. $10,000 in Cash Prizes. Ask for Particulars."

National advertising in magazines, newspapers, and on billboards, as well as local dealer advertising, has resulted in enlisting unprecedented public interest, and dealers have already reported a tremendous initial demand for contest blanks.

Inasmuch as the only place where the picture can be seen is the dealer's window, and the only place where entry blanks can be procured is inside the store, it can be readily understood that the contest will have considerable effect on the business done by the dealers who have signed up as "Team Workers."

The entire campaign is a result of the National Carbon Co.'s policy of dealer cooperation. Any merchant wishing further particulars should write the National Carbon Co., at San Francisco or Chicago.

## GUESS AGAIN

"Hello, is this Maisie? Yes, this is Jack. . . . Have I heard the news? I don't know. What's up? . . . Mrs. Murphy? . . . . Well, well, well! . . . Five o'clock this morning . . . Tell her I'm glad to hear she's doing well. . . . What's that? Two of them? Well, well! All right. (Hanging up the receiver.) What do you think of that? Mrs. Murphy smashed two of her fingers in the door this morning and fainted dead away?"

## STRENGTH OF ALLIED INDUSTRIES

A little over a year ago four vigorous, enterprising young men of the West, whose experience had led them into automobile accessory and electrical lines, combined to represent eastern manufacturers in an aggressive and intelligent way. They incorporated and took the name Allied Industries, large-sounding and assuming to be sure, but a real measure of their ability and aspirations.

Since then their enterprise and resourcefulness have been so proved, both to their customers and their principals, that Allied Industries, Inc., is now one of the most important, as well as one of the most active selling agencies in the far West. Offices are maintained at 279-283 Minna St., San Francisco, 1252 1st Ave., Seattle, Washington, and 340 Azusa St., Los Angeles, so that the western territory is well covered.

The activities of the company are nearly divided between electrical lines and auto accessories. Very appropriately the talents of the members of the firm are divided along the same lines. In fact, all the men connected with the Allied Industries gained valuable experience with the H. W. Johns-Manville Co., which is proof enough of their ability and standing in the trade.

W. S. Greenfield, former manager of the Johns-Manville San Francisco office, is manager of the Allied Industries. M. H. Klinger has long been an automobile accessory man, and he is vice president of the present concern and in charge of the automobile accessory department.

The genial, active secretary is C. D. Slaughter, formerly Johns-Manville sales manager, and at the present time serving Allied Industries in the same capacity. V. G. Van Booskirk, another member of the firm, has had particular experience in handling building material, so is particularly apt in handling the electrical contractors' supplies which are represented by the company.

B. A. Wagner, treasurer, is the only member of the firm who was not with the Johns-Manville Co. He has long been a specialist along electrical lines and in distributing the products of manufacturers. He is well known to the western trade.

Among the representative manufacturers for whom Allied Industries are the western representatives are: Davies Young Soap Co., Dayton, Ohio; Judd & Leland Mfg. Co., Clifton Springs, New York; Victor Mfg. Co., and Gasket Co., Chicago; Tubular Woven Fabric Co., Pawtucket, R. I.; Advance Pkg. & Supply Co., Chicago; Sedgwick Sales Co., New York; Youngstown Sheet & Tube Co., Youngston, Ohio; Trumbell-Vanderpool Electric Mfg. Co., Bantam, Conn.; Collyear Insulated Wire Co., Pawtucket, R. I.

## FOR SALE

(Music by Henry Ford)

One Ford car with piston rings;
Two rear wheels, one front spring.
Has no fenders, seat or plank;
Burns lots of gas. Hard to crank.
Carburetor busted, half way through.
Engine missing; hits on two.
Three years old; four in the spring.
Has shock absorbers and everything.
Radiator busted, sure does leak.
Differential's dry; you can hear it squeak.
Ten spokes missing. Front all bent.
Tires blowed out. Ain't worth a cent.
Got lots of speed; will run like the deuce;
Burns either gas or tobacco juice.
Tires all off; been run on the rim.
A d—mn good Ford for the shape it's in.

## INDIA ADDS TO SALES ORGANIZATION

In line with its announced plan calling for important additions to its selling organization in the field, the India Tire & Rubber Co., of Akron, has recently announced the following new appointments:

W. W. Alexander, for several years an influential factor in the tire selling world, has been named Direct Factory Representative in the New England territory, with headquarters in Boston. Alexander is especially well acquainted with the New England trade through his long association with The Diamond Rubber Co. in the early days of the industry. He comes to India from The Dayton Tire Company.

To Blakey & Hall, of Pittsburg, has been assigned the India distribution for Pittsburg and adjacent territory. The company stands high among Pittsburg's leading tire distributors, having built up an extraordinarily large volume of business during the last few years. Hall, a member of the firm, was for a long time connected with one of Pittsburg's leading newspapers.

Frank G. Schenuit, a popular tire man in Baltimore, has been given distribution rights for Baltimore and surrounding territory. He has a wide business acquaintance all through that district and those who know him best predict big things for India during the coming months.

---

H. F. Karnopp has bought the interest of his partner, C. E. Darling, at Almond, Wisconsin, and the former firm of Karnopp and Darling will now be known as H. F. Karnopp & Company.

---

Chas. W. Hall is the active new proprietor of the hardware business at Maywood, Nebraska, formerly owned by Ralph Peterson.

---

New members of the trade at Colville, Washington, are the Haun Bros. Implement Company, who recently bought the stock of E. E. Bridgman.

# A. C. Riddell Secures Able Co-Worker in Earl Jones

As a result of a steady increase in the business of the hardware and accessory manufacturers for whom he is western sales manager, A. C. Riddell of San Francisco and Los Angeles has for some time felt the necessity of adding to his organization a man capable of representing him to the jobbing trade in San Francisco and the Northwest.

After a careful survey of a number of likely applicants, Mr. Riddell has been fortunate in making arrangements with Earl Jones, formerly with the Whiton Hardware Co. of Seattle, to take charge of his San Francisco office and handle the trade in northern California, Oregon and Washington.

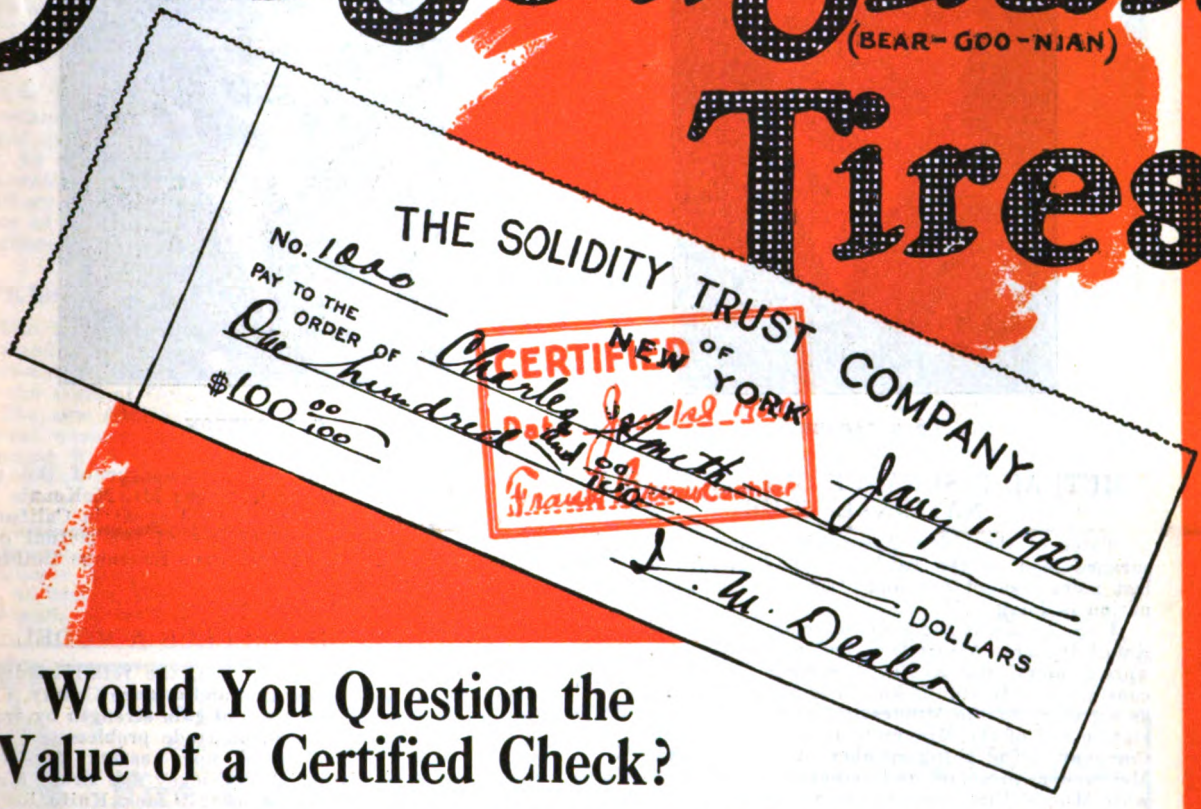
Earl Jones entered the hardware business just as so many have—with a broom. He has never been able to get away from hardware since. When he had cleaned the aisles of a suburban retail store in Southern California long enough to know where the goods were kept, he found that the business needed a good head and so he was proprietor for some time.

That was only one phase of his development, however, and he came to see that the retail business was rather too limited for his ability and his ambition.

We rather suspect that other than trade attractions took Mr. Jones into the Northwest a few years ago. At any rate, there is a coincidence here. Mr. Jones joined the Whiton Hardware Company's organization at Seattle at about the same time that he entered into partnership with Mrs. Jones.

During his almost three years with the Whiton Hardware Company Mr. Jones has served brilliantly both inside and outside. He has made the Seattle waterfront his special stronghold and he is known and respected by the trade for his ability and his genial personality. The close of the shipyards was only a challenge to Mr. Jones and as their operation ceased his business increased. So he comes to Mr. Riddell's organization well recommended, with a host of friends, with a fund of experience and an unquenchable enthusiasm.

The development of Mr. Riddell and his organization has been along similar lines. Mr. Riddell was born into the hardware trade, for his father was in business in the middle West and is at the present time interested in the Hoffman Hardware Company in southern California. Before the war A. C. Riddell was a member of the Hoffman organization. After his service in the Ordnance department, and with his discharge in January, 1919, Mr. Riddell commenced his present operations in representing eastern manufacturers in the territory from Denver west.



In the eighteen months since then, the business has developed rapidly, due to Mr. Riddell's able and persistent efforts and due to the fact that he places particular emphasis on the standing of the manufacturers and the quality of the goods he sells.

"Careful and thorough representation of standard lines," is the Riddell motto. Only a limited number of accounts are handled and each one is given detailed service, the same as they would receive from a member of their own sales force. Mr. Riddell does not consider himself a manufacturers' agent, but rather a factory salesman representing his principals just as their salesmen do.

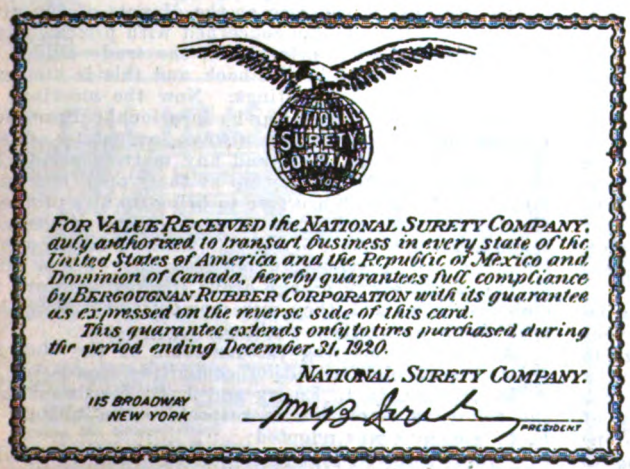
# Bergougnan Tires

(BEAR-GOO-NIAN)



## Would You Question the Value of a Certified Check?

You feel absolutely certain when the bank on which a check is drawn has certified it, that you will receive the full value of the check, down to the last penny.

That is just how we want dealers and tire users to feel about the BERGOUGNAN **certified** mileage guaranty. We want them to feel positive that they will get every mile that goes with the BERGOUGNAN guaranty:

**6,000 miles for fabric tires—8,000 miles for cord tires.**

In order to create this feeling of security, we have arranged with the National Surety Co., the largest bonding company in the world, to certify our guarantee.

You will find the certificate herewith attached to every Bergougnan tire you buy, or sell. It means that if we do not make good on our promise to give you the stipulated mileage, the National Surety Co. will.

Thanks to this double guaranty, Bergougnan Tires are the easiest tires to sell on the market. We may be able to give you the exclusive selling rights for your territory. Write today.

P. S. JACOBS

C. I. BUXTON

## MUTUAL INSURANCE BIG THREE ON NATIONAL TOUR

Three of the ablest Association secretaries and insurance men in the hardware field banded together last month to set out and "see how the rest of the nation is doing it."

P. S. Jacobs is the keen secretary of the Wisconsin Retail Dealers' Association, and manager of the Hardware Dealers' Mutual Fire Insurance Company of Wisconsin. C. I. Buxton is known to the trade equally well as secretary of the Minnesota Implement Dealers Association and of the Minnesota Implement Fire Insurance Company. The third member of the trio was T. G. McCracken, president and manager of the Retail Hardware Mutual Fire Insurance Company of Minnesota.

### Insurance Branch at San Francisco

One of the results of the trip in fact is the establishing of a direct branch office at San Francisco, where policies will be written, premiums paid, and losses adjusted. The Wisconsin and Minnesota companies some years ago outgrew the bounds of their own state and at the present time have mutual insurance in every state in the union. Combined they have $1,250,000 insurance in force.

The Minnesota Hardware Mutual is the pioneer organization, having been founded in 1899 by T. G. McCracken's father. For many years the company was carried on by Secretary M. S. Mathews. Since Mr. Mathews' death the functions of the Minnesota Association has been divided so that H. O. Roberts is Association Secretary and Mr. McCracken heads the insurance company.

The Minnesata Implement Mutual was founded in 1906 by L. C. Pryor of Minneapolis. Mr. Buxton has been secretary and manager since 1910, and the growth in his administration has been marvelous. At that time the dividend to policy holders was 25 per cent, but it is now just twice that. Thirty-two people are now employed in the company's offices.

Mr. Jacob's experience with the Wisconsin Association and the Wisconsin Hardware Mutual at Stevens Point has been very similar. When he took charge in 1912 the insurance department could be carried in a packing box. In fact it was so moved up to Stevens Point at that time. Now there is an office force of thirty people engaged in the insurance business alone and the association will erect a fine new building to house its activities in the very near future.

Chas. A. McKenzie will be manager of the new western branch. For the last year Mr. McKenzie has represented the companies as field agent in California particularly. The mutual offices of the mutual companies will be at 412-13 Insurance Exchange Building, San Francisco.

---

## ORANGE CLIPPER CLUB A MODEL

A little over two years ago, the retail hardware merchants in San Bernardino and Orange County, California, decided that they would gain strength by working together on their common trade problems. Therefore it was that such good, open-hearted, far-seeing fellows as F. E. Hobbs, F. P. Nickey and Bruce Moore who had been active in a local "Jack Knife" Club, met together and organized the Orange Clipper Club.

Meetings are held once a month at the various towns represented by the membership. Some fifteen separate firms are now represented in the membership of the club and although this is a large majority of the representative merchants, it is the hope of the club to include every merchant in its membership in the near future. Of course the attendance at the meetings is much larger than this, for all of the clerks and traveling salesmen, as well as representatives of the jobbing houses are always welcome at the dinners of the club.

At first the club was concerned with prices. Since the publication of a price book, the trade abides by the prices contained in the book and this is almost a dead subject at the meetings. Now the meetings of the club are rather social and educational. Prominent visitors in the locality are always invited to address the members of the club, and any matters perplexing the trade are always taken up at these open meetings. Members of the club are free to bring up any problems for discussion or solution. Every meeting of the club tends to bring about a better fellowship, a better understanding and a sympathy between the various merchants of the sunny orange grove country. Before the club was organized, they were competitors. Now they are friends and fellow workers.

At the last meeting the members of the club appointed a special resolution committee, consisting of A. D. Stewart, O. L. Emery and J. R. Westbrook, and the following resolution in respect to the memory of E. C. Simmons was adopted:

"Be it resolved that in the death of Mr. E. C. Simmons the membership of this club and the Retail Hard-

Digitized by Google

ware Dealers of the Pacific Coast and America have lost a trusted and valuable friend, known personally to many of us and to be a man of the highest character, who at all times kept the interests of his friends and the Retail Hardware Merchants close in head and heart.

"We feel that his loss to the Retail Hardware fraternity cannot be replaced and that it behooves each of us to so conduct our lives and our business and so serve our fellows, that we may be his worthy emulators.

"We further extend to his family our sincere and deepest sympathy in their great loss and bereavement."

---

The Black & Decker Mfg. Company's branch at Cleveland, Ohio, has found it necessary to move into larger quarters. Branch Manager G. A. Dodge may now be found at 6225 Carnegie Avenue, where he is cooperating with the Black & Decker jobbers in his territory and where there is a service station to give users of Black & Decker products prompt service at all times.

---

## PREST-O-LITE STATION AT PORTLAND

The M. D. Baker Company, Ninth and Davis Sts., Portland, Oregon, have been appointed distributors of Prest-o-lite storage batteries, gas tanks and appliances for the state of Oregon.

The new distributors will operate as a unit in the several western Prest-o-lite service under Field Sales Manager W. E. Darden, with headquarters at 599 8th Street, San Francisco.

## FIXED POLICIES OF BLACK & DECKER

President Black of the Black & Decker Mfg. Co. distributed to the trade at the Del Monte Convention a fine little booklet signed by himself and entitled "Fixed Policies." The booklets are beautifully published, with a reproduction of the Black & Decker seal on the cover. It is the Bible for the company's managers and salesmen, as well as for the company's customers. A successful business must be based on fixed policies, rather than on vacillating and changing ones, and the following are some of the axioms in the conduct of the Black & Decker Mfg. Company's business:

We believe in quality products.

We believe in quantity production.

We believe the happy workman is the best workman.

We believe in the jobber.

We have established branch offices in a number of the principal cities, and will establish more of these as time goes on. No sales are made direct by these branch offices, nor will be.

We recognize the right of quantity users to concessions in price on large lots, and have established a fixed scale.

We believe the most important thing a manufacturer can do to assist the jobber is to center his efforts on advertising and selling for the jobber.

We believe the jobber should cooperate with his dealers.

We believe in advertising.

## WESTERN BRANCH FOR STAR TIRES

Sam C. Breeder has been sent to the West by the Star Rubber Company as its organizing pioneer in opening the Company's far western branch, established at San Francisco last month. The office has been located at the warehouse, 639 Howard Street, where a full stock of tires is already on hand, filling two stories and a basement.

California, Nevada, Arizona and Oregon will be handled out of the San Francisco branch office, and it is most probable that another warehouse will be placed in Los Angeles before long.

In the Washington and Idaho panhandle territory, Star Tires will continue under the sales organization of the Whiton Hardware Company at Seattle. The Strevell-Paterson Hardware Company of Salt Lake will continue to represent the Star Rubber Company in the Intermountain territory.

Mr. Breeder has been identified with the Star Rubber Company ever since its organization four years ago. He is fortunate in a magnetic personality which makes friends and inspires confidence wherever he goes. He has just come from Kansas City, where he opened a branch for the company. In fact, he is the "star" member of the Star organization, as a scout and pioneer. The tire trade of the far west and the Star Rubber Company are mutually fortunate in the selection of Mr. Breeder to open the western branch.

---

The hardware trade in Colorado is mourning the loss of Benjamin F. Lowell, pioneer merchant of Colorado Springs. Mr. Lowell died at the age of 65, and owned a controlling interest in the Lowell Meservey Hardware Co.; his son, Chas. Lowell, is the owner of a hardware business at Fort Collins, Colorado, and two other sons are joint proprietors of another hardware firm at Idaho Springs.

## TRI-STATE ACCESSORY CORPORATION SERVES SOUTHWEST WELL

Although organized as lately as July, 1919, for the purpose of serving and developing their wholesale auto accessory business of the Southwest, the Tri-State Automobile Accessory Association, with its main office at El Paso, Texas, has become one of the most important institutions of the Southwest in less than a year of life.

This progressive institution serves the trade in the states of Arizona, New Mexico and Texas, and its business is conducted on a strictly wholesale basis. The effect of the energetic activity of the corporation has been to bring business to El Paso, which formerly was served by houses in California or in the Middle Western Centers. Their policy has always been to supply the dealer and garage man with every want and carry a stock in proportion with this object.

The extremely advantageous railroad facilities and the central location of El Paso have aided the institution in its operations. There are now seven men on the road exclusively for this institution, and a large business is developing in Mexico.

## SEATTLE ACCESSORY MEN SHIFTED

Two important shifts of automobile accessory executives have recently taken place at Seattle. F. Franklin is the new manager of the automobile accessory department of the Seattle Hardware Company. Mr. Franklin has long been connected with the automobile accessory business, both with the Whiton Hardware Company and with Ballou & Wright at Portland, Oregon. He has many friends in the Northwest who will be glad to hear of his appointment with the Seattle Hardware Company, in recognition of his ability. For the Whiton Hardware Company, N. A. Brownfield has become chief of the automobile accessory department. Mr. Brownfield was formerly Mr. Franklin's assistant in the Whiton department, and his acquaintance with the accessory business dates back over eight years. The long association of these two men should certainly pave the way for the cleanest, best maintained rivalry now that they head similar departments for rival institutions.

## LOCKWOOD ORGANIZATION EXPANDED

The Lockwood Manufacturing Company, makers of the Lockwood Line of auto fabric accessories, through its managing director, Paul Lockwood, announces the removal of its eastern branch office and plant from Brooklyn to Buffalo, N. Y., and the opening of an export sales branch in the Grand Central Palace, New York City. The export office was forced by rapidly increasing foreign demands for the Lockwood line of auto fabric accessories. The new Buffalo factory, 368 Massachusetts street, will give the company more space and larger equipment than the Brooklyn plant afforded.

The western office and factory—the parent plant—remains at Seventh and Wyandotte Streets, Kansas City, Mo. The Chicago sales branch will continue at 3021-23 South Michigan Avenue, Chicago.

The Lockwood Manufacturing Company recently bought and assumed complete charge of the auto fabric accessories division of the old Baker & Lockwood Manufacturing Company, taking over the entire accessories line which formerly bore the name "Baker." Mr. Lockwood, a graduate of every phase of the fabric accessories business, has adopted many aggressive policies that have made doubly popular this old and tested line known to jobbers and dealers everywhere.

---

The Tyler Mfg. Company of Boston, Massachusetts, whose Tymco line of automobile accessories is well known to the trade, have removed their general offices to 755 Boylston Street, where they have greatly increased their facilities for taking care of their business.

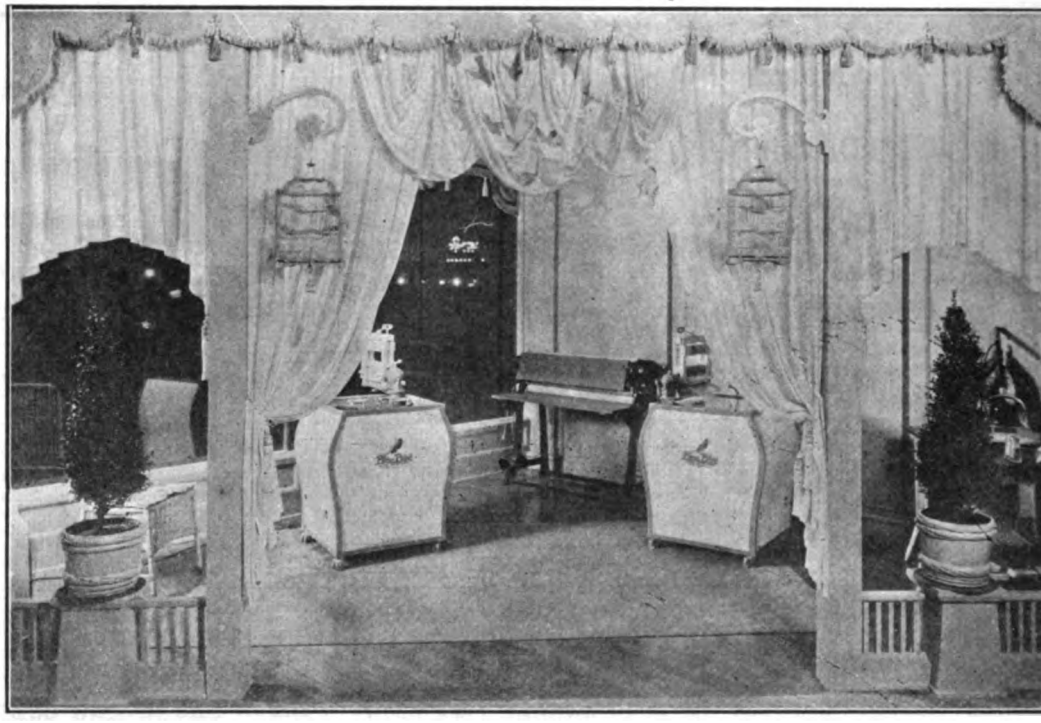
## WHY BLUE BIRDS FLY IN SEATTLE

The Blue Bird has come to be known to the world as the emblem of happiness and childlike delight. We believe our readers will agree with us that there is a double significance in the use of the Blue Bird and the resulting happiness from such window displays as the Ernst Hardware Co., of Seattle, has recently been making. Like the "quality of mercy," both buyer and merchant rejoice over the resulting sale.

We are glad to be able to reproduce this month a glimpse or two of the Ernst windows. President F. A. Ernst of the Ernst Hardware Co. is also president of the Pacific Northwest Hardware & Implement Association, and is one of the most enthusiastic, active and progressive merchants in the West.



During the last year the store has undergone alterations so that twice the available floor space and three or four times the former display room are now utilized by this progressive company. The store is situated in the midst of Seattle's best retail buying district on East Pike St. The management of the Ernst Hardware Co., in short, has realized that the world is passing the door, and the problem is to make the store and their wares as attractive as possible.

While a demonstration is going on in the window, people gather around the outside and take in the demonstration in detail. The mere action of this is interesting and arouses their curiosity, and it is but human nature that they move inside of the store to hear the words spoken and ask questions for themselves. The hangings are made as attractive as possible, and the entire impression is one of elegance, of beauty and attractiveness.

Showing what the result of the Blue Bird window has been, the Blue Bird Appliance Co., St. Louis, manufacturers of the Blue Bird Washing Machines, have notified the Ernst Hardware Co. their display is without question the finest of the kind in the United States.

In addition to Blue Birds and alternating with the washer, are shown electric ironers, vacuum cleaners and other household devices. Each predominates the window at the time of its display, demonstrations of each being made in full view of the passerby.

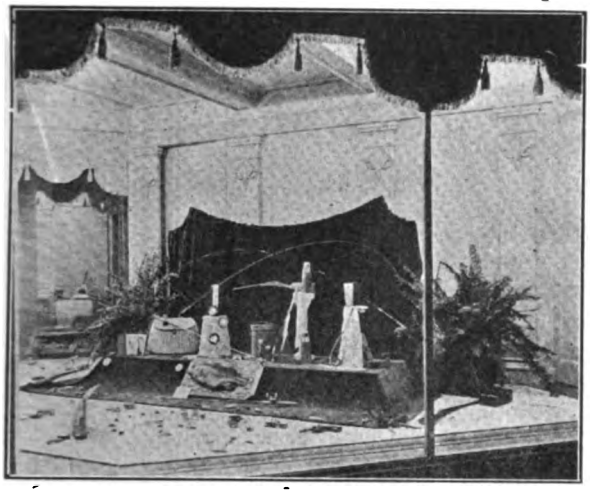
The company's experience has been that a window nearly on a level with the street commands the attention of the passerby. Furthermore being right on a level with the store and opening out of it, it is possible to get the customer to walk right into the window,

ATTRACTIVE BLUE BIRD ROOM OF THE ERNST HARDWARE CO.

This is only one of the many attractive departments maintained by the Ernst Hardware Co., who give the same personal attention to every phase of their business.

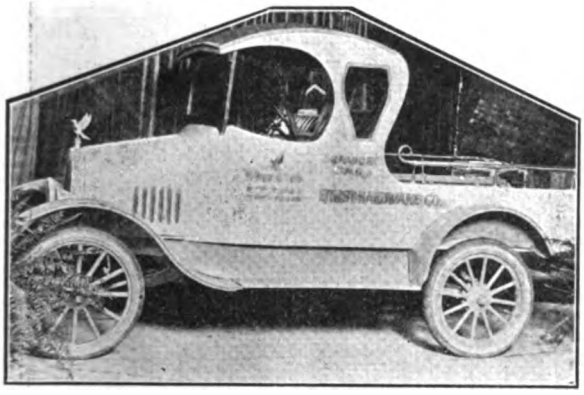
These window displays show how they are doing this. As our readers will note, this Blue Bird window display is on the level with the store, and the glass of the window comes within about twelve inches of the sidewalk. Therefore the impression is brought right home to the housewife. She does not see any display up on a stage or surrounded by tools or decorated at the back with a full wall of other paraphernalia.

Here is a washing machine right in a beautifully appointed room, and absolutely dominating the room. Moreover all demonstrations and sales are made right in the window. Although this window space is invaluable to the company, it is believed that it is better to handle one line well and make it win than to show nibbles of a great many edibles to the passerby until his appetite is confused and he takes home nothing.



making his purchase without a feeling of conspicuousness, and proving a wonderful magnet for the attention of the passerby.

Following out the spirit and code of the Bluebird campaign, is the special delivery car. This is the symbol of Bluebird service which the company gives and its advertising value and neat attractiveness, of course, can be realized. In other words, the company believes in taking advantage of every available opportunity to attract the attention and arouse the interest of the community.



---

E. Demaray, popular and progressive merchant at Dayton, Oregon, has been busy moving his business to a new location, where a larger stock will be more adequately housed.

Digitized by Google

This first prize sporting goods window of the Ernst Hardware Co. is one that commanded the highest admiration. Just as in housefurnishing and sporting goods, so in accessory lines they are recognized as one of the most progressive merchants in the entire country.

ERNST HARDWARE CO.

## ADVANCE CORK INSERT PATENT UPHELD

Advance Cork Insert Transmission and Brake Lining as manufactured by the Advance Automobile Accessory Corporation, has been declared the exclusive and patented property of the manufacturers in a recent Federal Court suit over an infringement on the patent rights.

In addition to holding the Cork Insert patent valid, the Court ordered a permanent and perpetual injunction to be issued, and an accounting for damages and profits by a competing manufacturer who had infringed on the patent right.

The Advance Automobile Accessories Corporation set up as one of its claims in this suit that the imitation Cork Insert Linings being offered to the trade were far inferior to the genuine product, and did not give good results when put into use, and, consequently, damaged the reputation of genuine Advance Cork Insert with the trade and the public.

The Advance Automobile Accessories Corporation reports that to the best of their belief only a comparatively small amount of the imitation and infringing Cork Insert Linings was handled by the legitimate jobbing trade, as the Advance Company took every precaution to protect the jobbers from liability to suits for damages and profits, by sending out repeated notices to the trade of the infringing nature of the imitation linings, and calling attention to the suit pending.

## T. H. SPEDDY PASSES AWAY

Another veteran of the hardware fraternity in the far West was summoned by death last month when T. H. Speddy passed away at his home in Alameda, California. Mr. Speddy was long and widely known as a manufacturers' sales agent in the western trade. For the last 45 years Mr. Speddy has been identified with the hardware trade centered in San Francisco, and was admired and respected by the trade in the West.

Mr. Speddy was seventy-two years old at the time of his death and was a veteran of the Civil war. A native of Ohio, he enlisted in the army when he was only seventeen years old. Afterward, recognizing the opportunities and promise of the Pacific Coast, he moved out into the new land and identified himself with the growing trade of the Western Coast.

The firm of T. H. Speddy & Company was established in 1891 and incorporated in 1904. Howard H. Speddy is secretary, and will continue the representation of the many manufacturers whose business has been so successfully handled in the past.

## CALIFORNIA CONVENTION AT YOSEMITE

The California Retail Hardware and Implement Association will combine business and pleasure and draw attention to the scenic wonders of the far western states when they gather in convention at the Yosemite Valley next September. It has always been the custom for the northern and southern divisions of the California Association to hold separate meetings in the spring and fall, one in Los Angeles and one in San Francisco.

The meeting at Yosemite will be a joint meeting, which will help to make it a rousing one.

There is certainly no excuse for lack of "high" spirits, plenty of "air," "clear" thinking and a "wonderful outlook" on the part of the members as they face the problems of the trade alongside of the beauties of nature.

Following are the new officers of the two divisions of the California Association:

Northern Division—G. A. Gutman, President, Willows, Cal.; Chas. C. Floyd, Vice President, Santa Maria, Cal.; M. M. Brown, Treasurer, San Francisco. Cal.; Le Roy Smith, Secretary, San Francisco Cal.

Southern Division—E. S. Campbell, President, Los Angeles, Cal.; William Scott, Vice President, Los Angeles, Cal.; E. F. Harford, Vice President, Colton, Cal.; J. Glenn Marks, Secretary-Treasurer, Los Angeles, Cal.

---

## THEIR CORRECTED NAMES

It was G. H. Webb of the Webb Hardware Company at San Diego, California, who was the purchaser of the business of H. N. McKie of Monrovia, California. In announcing this purchase, names were inaccurately reported in a recent issue of the HARDWARE WORLD.

---

## NCR OWL CLASSES FOR EMPLOYES

The thousands of merchants whose profits are insured and whose accounting is simplified by the use of a National Cash Register are interested to hear from time to time the human story behind the register, how the company which manufactures these money saving devices is among the most humanitarian and enlightened of American industrial concerns.

Typical of the attitude of the company toward its employes came the closing exercises of the 1919 and 1920 Owl Classes, held at Community Hall, Dayton, Ohio, recently. A good many years ago, the heads of the company decided that a class for the employes would be a sound institution. Classes were started at night, at first only one or two classes and one or two subjects. Now the classes are great bodies during the winter from October until April. Such subjects as the following are taught by instructors from the factory itself: Advanced salesmanship, elementary salesmanship, mechanical drawing, agency office practice, public speaking, accounting, home economics, advertising and printing, elementary shop mathematics, advanced shop mathematics, free-hand drawing, home hygiene and Spanish.

President Patterson had the pleasure of presenting 241 diplomas at the last commencement exercises. Among these were 66 girls who had completed the home economics and home hygiene courses. They served lunch at the close of the exercises. We see in this that the women in industry are not interested in replacing the men to the exclusion of preparation for labors at home.

---

Brown & Campbell, one of the growing hardware concerns in California, have decided to increase their capital stock to $100,000. They are located at Hollister, California.

---

F. C. Moye has sold his hardware store in Boulder, Colorado, to J. H. Fiske and Arthur Lumsden, of Leadville, Colorado. Moye has been in the hardware business in Boulder for twenty years.

## A. T. LLOYD SELLS MILLER FIXTURES

A. T. Lloyd, of the Lloyd Sales Agency, Inc., has been appointed western sales manager for Edward Miller & Co., of Meriden, Connecticut. The selection of Mr. Lloyd came as a result of the visit of General Sales Manager Michael Schwartz, of the Miller Co. On his tour he attended the National Electrical convention at Pasadena, California, and visited the trade throughout the west.

A. T. Lloyd is known throughout the west by the buyers and the trade, especially as a leader along electrical lines. For several years he was manager of the Baker Smith Company, and only recently organized the Lloyd Sales Agency.

Edward Miller & Co. have been established since 1844 and have manufactured lighting fixtures for every class of power. Today they are putting on the market a high grade line of electric lighting fixtures for the home with an entirely new selling plan for the dealer. Their fixtures are now being commercialized through an extensive advertising campaign. By confining their manufacture to only a few of the best designs they are producing high grade fixtures at prices which compete with inferior fixtures on the market.

Their selling policy covers the sale of "Miller" fixtures through the Miller dealer in each city who establishes himself as their agent, and full co-operation will be given such dealers through the factory's system of handling the present advertising campaign. All fixtures are put up in individual shipping cartons, ready for the consumer, each being wired and completely assembled at the factory. This new method means that the dealer is relieved of estimating his assembling cost which has caused losses in the past.

Edward Miller & Company have proven, within one year's time in merchandising lighting fixtures under this new system, that the dealer can, at last, be satisfied with a profitable fixture business with increased volume. The Miller line of electric portables are merchandised through the jobber and dealers, the same as in the past. New types of electric floor standards are also being created by the company.

Western sales office for Edward Miller & Co. will be in the Monadnock Building, San Francisco, where the Lloyd Sales Agency also has its headquarters and main offices.

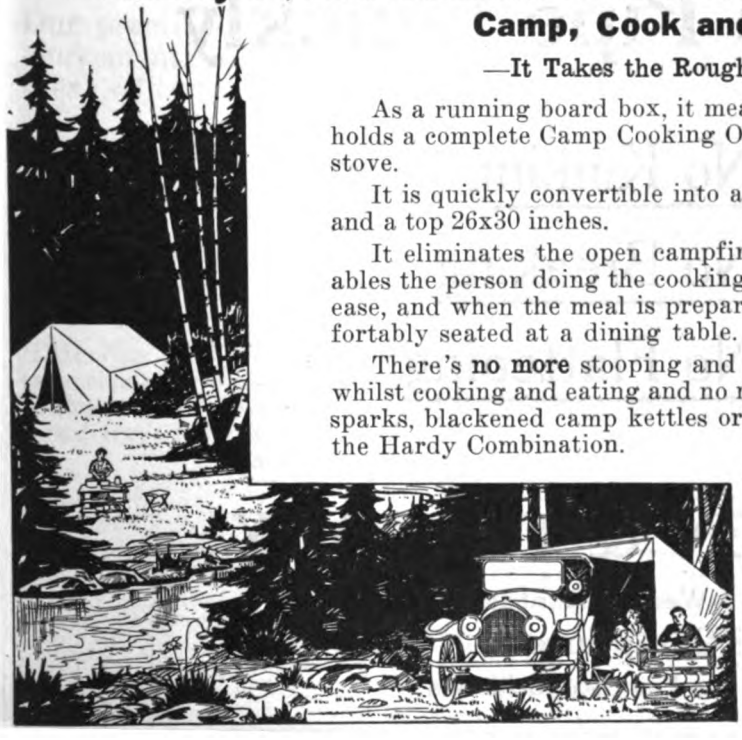
---

## AN IRONING TABLE LIKE IRON

Every wide-awake western merchant handling household goods knows he must make an appeal to women buyers. Since practically every one of our readers is now in the market for the right sort of household goods and specialties just for the purpose of attracting women, they will be interested in the announcement of the Rid-Jid open end, folding ironing table elsewhere in these pages.

The resourcefulness of the manufacturers, the Rid-Jid Products Corporation of Waukegan, Illinois, have perfected this modern ironing table. Instead of resting over two chairs as the old fashioned ironing table did, the Rid-Jid is supported on diagonal braces. In fact, it has the benefit of four feet, but at the same time it has the open end which allows full use of the ironing table. It is possible for an adult to sit at the open end of the ironing table, perfectly safe and solid.

Merchants who have handled the Rid-Jid Ironing Table can say truthfully that it fills a pressing need. The manufacturers, formerly the Oregon Woodenware Mfg. Company, will be pleased to send literature on request to any merchant, referring his order to the nearest distributor.



---

The hardware department of the Marino Lumber Co., of Marino, Colorado, is setting a good example to other business houses and firms. The building is being painted from floor to roof, inside and out, and makes a great difference in the appearance of the place.

# Hardy's Combination Running Board Box

**Camp, Cook and Dining Table**

—It Takes the Rough out of Camp Life

As a running board box, it measures 10½x10½x30 inches, and holds a complete Camp Cooking Outfit, a dining service and a gas stove.

It is quickly convertible into a camp table, having two shelves and a top 26x30 inches.

It eliminates the open campfire for cooking purposes and enables the person doing the cooking to stand upright and cook with ease, and when the meal is prepared to partake of the same, comfortably seated at a dining table.

There's no more stooping and squatting in awkward positions whilst cooking and eating and no more blinding smoke. dirt, flying sparks, blackened camp kettles or hunting for firewood if you use the Hardy Combination.

It is truly the Camper's Friend.

For sale by Hardware and Sporting Goods Stores and Camp Equipment Houses.

## GOVERNMENT ENDORSES AUTO STROP SAFETY RAZORS

Expressive of the appreciation of the United States Government for the patriotic service of the Auto Strop Safety Razor Co. of New York, in furnishing supplies during the war, a handsome certificate of merit has been awarded to the company. This certificate was presented by General Bullard in the Assembly Room of the New York Chamber of Commerce last month. Accompanying the certificate was a beautifully worded letter from the war department, which mentioned the fact that the AutoStrop Safety Razor Co, had patriotically turned over its entire production to the Government during the war at the expense of its civilian trade.

This action of the company was appropriate and fitting. Service and satisfaction might be said to be the mottos of the company, and service in time of war meant service to the government. Service in time of peace has been converted by the company to mean service to the buyers and users of AutoStrop safety razors. The trade well knows this razor as the one which shaves, strops and cleans without detaching the blade. The company has always been noted for its clean cut dealing with the trade.

## SAVAGE BUYS STEVENS ARMS COMPANY

The Savage Arms Corporation has purchased from the New England Westinghouse Co. the stock of the J. Stevens Arms Co., of Chicopee Falls, Massachusetts, and the two companies will be operated under one management hereafter. It is not contemplated at this time that any radical changes in policy or personnel will be made, although of course further announcement will be made when the merger is more complete.

The Savage Arms Corporation believes that this consolidation of interests will result in more satisfactory relations with the trade, and it is only natural that two interests which do not in any way conflict can be operated more beneficially and more successfully together than separately.

The consolidation of the two lines makes available to the trade a far more complete line of arms than was ever offered by either one of the two manufacturers. The Savage-Stevens line now embraces target pistols, automatic pistols, boys' rifles, target rifles, high power sporting rifles in both lever and bolt action and single and double barrel shotguns. It is claimed that the consolidation of the Savage and Stevens Companies makes them the largest producers of fire arms in the country, as far as the number of arms is concerned.

Surely the last twelve months have been important ones in the fire-arms and ammunition business, and the year 1920 will always be written large in fire-arm history. Although the consolidation of the Savage Stevens Companies is the last of several sensational developments, surely it is by no means the least, and it bids fair to be of advantage and benefit to the trade.

## ONEIDA PLATE A'FLYING IN AUSTRALIA

To a representative of the Oneida Community, Limited, manufacturers of Community Plate, goes the distinction of being one of the first men to make a business trip by airplane in Australia. R. S. Hurlbut traveled by air from Melbourne to Geelong in a Sopwith Gnu machine in 28 minutes. After transacting his business in Geelong, he returned to Melbourne the same way, making the trip in 35 minutes.

Mr. Hurlbut's story of his experience is as follows:

"It was necessary to make a business trip to Geelong, and as time was very limited, I arranged to 'fly' to Geelong. I motored out to the aviation grounds early, as it was necessary, on account of urgent business matters, to get back to Melbourne before lunch. I lost no time in getting aboard the machine, taking my portfolio of complete Community Plate samples with me. We left the grounds at 11 o'clock, arriving at Geelong (a distance of 45 miles) at 11:28 a. m.

"Soon after landing I took a motor into Geelong to visit the trade, and, after transacting business, motored back to the landing ground again and set out for the return trip to Melbourne. We ran into a very strong head wind, making it more difficult. The whole journey—a matter of 90 miles—was a very delightful one. Airplane traveling is very comfortable and an easy means of transacting business quickly. I strongly recommend it for everyone taking a similar business or even a pleasure trip."

## REMINGTON WINS OLYMPIC TEST

In the United States government test at Sea Girt, N. J., recently to determine the ammunition to be used by the American Rifle Team at the Olympic Games at Antwerp, Belgium, this summer, Remington .30 caliber Springfield 180 grain Palma Match ammunition won over all competitors with the finest record ever made in an official test at 600 yards. This is the same ammunition used in winning the Wimbledon Cup Match at 1000 yards last year at the National Matches at Caldwell, N. J.

## NEW COMPANY MAKES NAPIER BAND SAWS

A new company, headed by Fred T. Lee, formerly president of the Napier Saw Works, Inc., Springfield, Mass., and Henry F. Blanchard, formerly treasurer and general manager, has been organized to take over only the band saw and band saw machine business of the last named company. The new company will be known as the Metal Saw & Machine Co., Inc., and will be located in the Springfield, Mass., plant heretofore occupied by the Napier Saw Works.

Mr. Lee is president of the new company and Mr. Blanchard treasurer and general manager. They expect to employ 100 persons. This year's schedule calls for the production of several hundred machines, but it is intended to turn out more than 2000 in 1921. The Metal Saw & Machine Co., Inc., will continue to manufacture and market the "Napier" Metal-Cutting Machine and "Napier" Metal Cutting Band Saws.

## E. W. KLEIN JOINS C. H. SCHIECK CO.

We are pleased to announce to those merchants who handle Quick Meal Stoves or who are interested in handling them, that Ed W. Klein has joined the C. H. Schieck Co. Mr. Klein combines the enthusiasm of youth with an aptitude for the stove business, which comes to him by blood and by training. He is a son-in-law to C. H. Schieck, western manager for Quick Meal Stoves and Mr. Schieck's long connection with the trade is carried on to his kinsman.

Mr. Klein has spent the last two years at the Quick Meal Stove factory. He is qualified as an expert and will be meeting the trade in the West from now on. He is sure to be welcome to the stove merchants through his own personality and because of his representation of modern heating and cooking appliances.

## LOCKING YOUR STABLE DOOR

Wise people in the past have told the story of the man who locked his stable door after his horse had escaped. Although the stable doors in the country have diminished until the illustration is somewhat weakened, nevertheless putting a safe lock on the door before the house is entered still has its old force. Merchants throughout the territory are coming to recognize that C. M. Hatcher, inventor of the Hatcher Safety Lock, has made it possible for the ordinary houseowner to leave his goods in his house with the assurance that no burglar will enter through the front door, at least, during his absence.

The Hatcher Safety Lock is manufactured by R. H. Marchant Company of Oakland, California, and distributed by the Graf Sales Company, which has its headquarters in the Hearst Building, San Francisco. The lock sells for only fifty cents and sells on sight.

In principle, the Hatcher Safety Lock fits down over the door knob and keyhole and so prevents any breaking of the lock with a screw-driver or other tool.

Armstrong-Hume Company are a new firm at Zionsville, Indiana. They have purchased the stock of the Shrontz Hardware Company, and are adding to it.

Wm. Hoffman and Willys A. Higgins are the new proprietors of the Hoffman hardware store, 1920 Monterey Avenue, Blue Island, Illinois. The stock will be increased and new fixtures will be installed to take care of the new stock.

The McDonald Hardware Company has been incorporated at Southwest City, Missouri, and will conduct both a wholesale and retail business. The new organization is capitalized at $25,000 and the principal stock holders are C. Harrington, W. J. Boke and L. P. Kemper. They will deal in the line of hardware, automobile accessories, implements and household goods.

## KEES SKATES AND SCOOTERS

If our readers can pronounce the headline above as fast as Kees' customers do, they will show that there is much in a name. Since skates have been invented the word Kees has been identifed with them. There is not a boy or girl skater, who is not looking for "Skate Keys," and it should be an easy trick for the hardware man to turn these words around and put the words Kees Skates on every tongue in place of Skate Keys.

New bulletin No. S-1 of the F. D. Kees Mfg. Co., Beatrice, Nebraska, covers the company's ice skates, roller skates, and scooters completely. Of particular interest at this time are numbers 99 and 199 boys skate, and 102 girls. These are Brownie Extension Roller Skates. They are popular with the children because of their fast running ball bearing wheels, and rubber cushioned wheel trucks.

From the parents' point of view they are also safe for they can be perfectly adjusted, while at the same time they can not be taken apart or fall apart. Brownie wheels are pressed steel with solid, one-piece tread. The 16 hardened steel ball bearings in each wheel are carried in double races, running on a hardened steel cone. The wheels are self-contained, that is, there are no loose parts to be lost. All numbers are nickel plated except the wheels, which are plain steel. The skates are made in different models for women, girls and for men and boys. Each pair is packed in an individual carton, 12 pairs in a corrugated fibre case or 50 pairs in a wooden case, shipping weight is 5 pounds per pair.

The Brownie Ball Bearing Scooters are a new edition to the Kees line. It has a strong 20-inch footboard mounted on four ball bearing skate wheels carried on rubber cushion trucks, guided by a 24-inch handle conveniently placed. Painted bright red, and the color and play appeal of this practical toy will get the kiddies—leave it to them to drag their dads in to buy one. The enterprising merchant who displays these scooters where the youngsters can see them, will find this is a toy that sells the year round. The scooters are packed one dozen in a corrugated fibre case, weight per dozen, 40 pounds.

## FULL QUICK MEAL STOVE STOCK

The Quick Meal Stove Company, Division of the American Stove Company, is making a novel announcement in the pages of this issue of the HARDWARE WORLD. C. H. Schieck, far western representative for the Quick Meal Stove Company, announces that he now has a large stock of Quick Meal Stoves for immediate delivery to the trade. It just happens that Mr. Schieck has had delayed delivery on several carloads of stoves that were long overdue and he is able to supply the trade. He will be pleased to send his catalog of oil stoves, as well as coal ranges, to any dealer or distributor on request, and all orders will be referred to the nearest distributors.

## NEW RICHARDS-WILCOX BRANCHES

Within the last few weeks changes in location of Richards-Wilcox Manufacturing Company branches have taken place in three large cities. The new headquarters are located as follows:

Chicago—166-168 West Lake Street, J. V. Wise, Manager.

Cleveland—457 Hippodrome Annex Burt Daugherty, Manager.

Indianapolis—608-9 Occidental Bldg., C. E. White, Manager.

The Menties Hardware Company, Ltd., of Chilliwack, British Columbia, has been organized with an authorized capital of $25,000.

## SILVER SOUNDS FROM SILVER STEEL SAWS

Most everybody knows that Atkins Silver Steel Saws are highest in quality as regards material, temper and workmanship, but few know that wonderful music can be played on them. This is being demonstrated in New York on the New Amsterdam Roof by Sam Moore, a musical prodigy of extraordinary ability, who is astounding the New York populace by playing an Atkins saw with a violin bow, accompanied by Mme. Anna Marie De Milita (harpist).

Mr. Moore started taking lessons from his father on the violin and kept up his music by tinkering with every conceivable thing that would make a tone. One day he saw an old negro put a saw across his knees and tap it gently with the handle of a file. Upon hearing the clear, mellow tone, he purchased a new saw and began a course of self-instruction to play it, soon becoming proficient enough to keep the neighbors awake at nights.

In playing the saw he first used a pencil with a rubber tube on the end, but later discovered that a violin bow drawn across the back of the saw while bent back and forth, would make a tone unequalled by any instrument. After spending years to develop this novelty, Mr. Moore took it to New York and sold his services to Ziegfeld. Mr. Moore says he has examined thousands of saws but none of them are equal in tone to Atkins because Atkins Saws are quality clear through.

## DID YOU GET "THE CAMPER"?

Over six thousand copies of the Gold Medal Camp Furniture Mfg. Company's house organ, "The Camper," were mailed to merchants all over the United States last month, dealing in hardware, sporting goods, furniture, tents and awning. The trade, of course, needs no second convincing of the worth and value of the Gold Medal line, once they become acquainted with it, but there are always new items in the line and new ideas to be gained from the company's sales literature. Merchants who did not receive a recent copy of "The Camper" or who are not on the Gold Medal Company's mailing list, should communicate with the company direct at Racine, Wisconsin.

## COLEMAN LAMP RECOGNIZED BY UNDERWRITERS

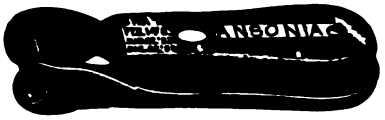
Of considerable significance to dealers, merchants and jobbers is the recognition given the Coleman Quick-Lite Lamps by the National Board of Underwriters. This organization has placed the Quick-Lite Lamps on its "Permitted List." The Coleman Company considers this significant recognition and the greatly increased business in Quick-Lites which dealers and jobbers are handling all over the country and their growing popularity for lighting purposes as additional proof of their safety.

Regarding the permit granted by the National Board of Underwriters, Chas. E. Parr, General Sales Manager of the Coleman Lamp Company, which has its main offices and factory at Wichita, Kansas, says:

"It is interesting to note that larger and larger sales have been experienced by dealers in this line as the old prejudice against gasoline lighting has been dispelled. There never was much danger from the use of gasoline for lighting purposes. The only trouble has been its improper use by the careless or ignorant, in lamps never intended for the purpose. Continued use has now demonstrated the practicability and safety of gasoline lamps when properly made according to National Underwriters' specifications.

"We are glad to say that each year finds gasoline lighting more and more in evidence. This is evident by the hundreds of thousands of Quick-Lite Lamps which hardware merchants are placing in homes both in this country and abroad. The great number of Quick-Lites in use have demonstrated their capabilities and dealers report great satisfaction over sales results.

## ORDERS FOR HEEL PLATES BEING FILLED



An unusual announcement for the present manufacturer comes from The Star Heel Plate Co., Louis Sacks, Inc., Newark, N. J., that the company is filling orders for the well known Star Heel Plates promptly. The demand for Star Heel Plates has increased considerably, due to their superior quality, yet the makers are making prompt shipments and suggest that jobbers place their orders immediately covering their present and future requirements. The Star Heel Plate Co. will also be pleased to mail on request a copy of the latest catalog No. 14 and price list applying to same, illustrating lasts and stands, cobbler sets, shoe repairing tools, etc.

Cox & Lough have purchased the business of Hanneman Bros. at Magnolia, Iowa.

The store of the Dunlap Hardware Company, at La Conner, Washington, was filled to overflowing one day towards the end of April, when the company held a demonstration of oil stoves, which has been advertised some time previously.

## INDOOR RIFLE CHAMPIONS OF 1920

When it comes to proficiency in the use of the small bore rifle, the team representing the Quinnipiac Rifle and Revolver Club of New Haven, Conn., has demonstrated in the winning of the National Rifle Association Indoor Gallery Championship Matches for 1920 that it is in a class by itself. Never in the history of rifle shooting has such scores been recorded as were credited to the Quinnipiac team this past winter.

In the ten matches the shooters scored 9991 x 10,000. In six of the ten matches the team made perfect scores —the five highest shooters comprising the team (ten men shooting)—in one match, the seventh, nine of the ten men made perfect scores and the tenth shooter marked up 199 x 200, and in the ninth match every one of the ten shooters scored a "possible" 200, but better still, a composite target shows that the entire 200 shots can be covered by a five cent piece.

And then we get down to one of the individuals, A. A. Clouet, the captain. All this shooter did was to score 1999 x 2000, scoring 200 in each of nine matches and 199 x 200 in the other. The only fellow who can make a better score than Clouet is the lad who can go 200 in every match.

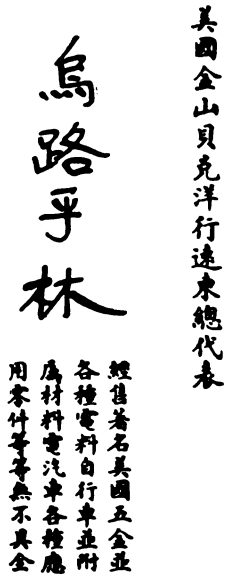
Quinnipiac has always had good shooters. They finished second to Denver in the Gallery championships last year, and this year went out with the idea of being in the front all the time. A glance at this score will readily show why they landed at the top and established new records for small bore shooting:

First match, 999; second match, 997; Third match, 997; fourth match, 1000; fifth match, 998; sixth match, 1000; seventh match, 1000; eighth match, 1000; ninth match, 1000; tenth match, 1000.

Being residents of New Haven, and having their range on Chapel Street in the center of that enterprising town, the Quinnipiac shooters secured the loan of three of the .22 caliber bolt action box magazine rifles, which were made for the American International small bore team that defeated England for the Dewar trophy last August, through the courtesy of the Winchester Repeating Arms Company. "Precision" ammunition, developed by the Winchester Co., was used throughout.

Here is the individual score of each shooter:

A. A. Clouet (Captain), 1999x2000; W. H. Richard, 1996x2000; W. O. Breuler, 1996x2000; H. J. Gussman, 1994x2000; Virgil Richard, 1989x2000; J. H J. Adams, 1988x2000; P. E. Littlehale, 1987x2000; G. E. Wilcox, 1981x2000; F. J. Haas, 1792x1800; W. B. Curtis, 1186x 1200; A. Klocker, 800x800; H. A. Neilson, 195x200.



## BUSINESS LIBRARY

The organization of a business library has just been completed and the library established in the Oregon Building by Whitfield, Whitcomb & Co., Certified Public Accountants.

While designed primarily for the use of the company and its clients, it has been opened to the firms and business men of the city. An experienced reference librarian is in charge and her services are available to those who wish to use the library. The library already has a fine collection of books and pamphlets and, also, an extensive file of technical magazines covering various industries.

The books and magazines are indexed analytically. This method of indexing requires much more time than the method of indexing generally used in large libraries, but it has been proven to be practical in the technical libraries. It makes the material more readily and quickly available and thereby adds much to the library's value to the business man.

It is planned to add new books and other material as the library becomes better known. The service is entirely gratis and the library is convenient by reason of being located in the business district and in the same building as the Chamber of Commerce. It is believed that this new venture, which is thought to be the first of its kind in Portland, will prove a valuable asset to the business men of that city.

## "PLEASED TO MEET YOU"

"Why, yes, of course, come right in. I am glad to see you again." This is a translation of what we suppose is said when our good friend, G. P. Wolfrom, representing Baker, Hamilton & Pacific Co., presents this business card in China. It is far easier for us to imagine the response to the card, than it is for us to translate the subject matter printed on the card itself.

It is our general rule to approve every word published in our columns. We are at a disadvantage in this case, so that we have to take the chance that there is no offense. From our knowledge of Mr. Wolfrom, and that of his principals, we can practically assure our readers that there is nothing improper contained in the message that the card conveys.

Mr. Wolfrom left for the Orient June 8th, on the liner Korea Maru. He will probably be absent from this country for two years, presenting the Stiletto line to the far eastern buyers.

---

The Western Hdwe. Co. recently opened a store at 335 American Avenue, Long Beach. The capital stock of the new concern is $50,000, and H. L. Herring, J. R. Sowden, and J. H. Lehman, are the directors and in active management.

---

F. W. Stein and T. F. Tally have purchased the interests of J. F. Lewis and his store at Camarillo, Ventura County, California. The new firm will carry a new and complete stock, and will be known as Stein & Tally.

---

C. A. Richmond, well known in Mabton, Washington, purchased and has taken possession of the Sohn Hardware Co., in that city.

**"HARDWARE WORLD" GIVES COUNTRY-WIDE DISTRIBUTION**

We want to thank you for all your kindness and tell you that the advertisement in your excellent HARDWARE WORLD has brought me a great many inquiries, and I am sure much good will come of it.

We have now jobbers from California to North and South Carolina and from Maine to New Mexico who are handling our pipe.

## Cash and Carry in the Plumbing Business

(By Harry Gale Nye)

THERE are some people who say the plumbing business isn't all that it is supposed to be—and they are right. For one thing, it is supposed to be spot cash.

I suppose the only real, honest-to-goodness, blown-in the bottle spot cash business there ever was in the world is the stamp window of a postoffice. The cash and carry grocery may be another. In fact the cash you have to pay is a good deal larger than the groceries you have to carry.

The plumbing business is kind of a cash and carry business, too. You make a cash price, and then have to carry the customer for three or four months. That is where the cash and carry part of it comes in.

Every now and then a merchant announces that he is going to do a spot cash business. But then some perfectly good customer comes along, some fellow that you know is as good as wheat, and you make him a cash price; but, when the time for payment comes, he hasn't quite as much in his pocket as the bill comes to, so he asks you to charge it and he will come in in a day or two.

Then he loses your address, and he never can find that plumbing shop again, try as he will. In consequence you have a little account on your books that is earning 0 per cent.

Or he has a bill you can't change, or is going to want a few more things, or another little job done in a few days—anyway you fall for it. And, first thing you know, you find these "good" accounts are multiplying like guinea pigs.

So you decide to collect up these good accounts and get them off your books. But you find that A is out of money just then, or B has sold and moved away or C swears he paid you when he got the goods or had the job done; and you never get the money, or, if you do, it's a long, long trail.

That is how we accumulate these bad good accounts. Accounts are a good deal like diseases. If a man gets the smallpox he rushes off to a doctor and does something about it and has it cured up—and that's the way it is with a "bad" account. But if a man gets a cold he just lets it run along until he has pneumonia or something else. Likewise when a man gets a "good" account he lets it run along until it develops into financial pneumonia that, if he doesn't watch out, will kill him in the end.

So, if I had any advice to give, it would be to keep a close eye on your "good" accounts. The man whose credit is bad expects to be made to pay; but the "good" man knows he is perfectly good, and knows that you know he is perfectly good and so he doesn't bother his head any more about it. He lets it run along—for it has been my observation that, if the creditor is willing to let an account "run along" the debtor is always equally willing to let it do so—and it slips his memory or at least loses its importance. There are so many things in these times that "have to be paid" that a man isn't going to worry very much about the things that don't.

It is by this simple process that the good account becomes a bad one. It is'nt hard at all for a man who pays cash to become convinced that he did—and he is perfectly honest about it, if it is a small account. Why, he will tell you, he always pays cash, and he must have done it in this case.

If you ask him for a receipt, he didn't get one, didn't think it was necessary. He gets to feeling like the boy at college who wrote to his dad:

"Here I am in college and they are still making me take spelling. It makes me soar."

Likewise it makes the man who pays cash "soar" and the sorer he gets the higher he soars. You let him have a little credit in order to make a friend, and find that you have made an enemy. In his heart he is ready to accuse you of bad bookkeeping, or something worse.

That is why I say watch your "good" accounts, for they are a fruitful source of trouble and may be lingering on your books long after the "bad" account has been paid or the "bad" creditor has moved to some other town to work some other plumber for some other job.

## PLUMBING COSTS WON'T DROP

Plumbing and heating costs throughout the United States will not be reduced, although costs in other lines revert to normal, according to William J. Wooley of the trade extension bureau of the National Association of Master Plumbers, who was the chief speaker at the closing session of the Oregon Master Plumbers' association at the recent Salem convention.

"Heating and plumbing costs in Oregon are far below those in the eastern states and the master plumbers of this section are not receiving the high prices they are entitled to.

"Plumbers in the west and middle west who transact a business of less that $50,000 a year do not receive a profit corresponding to the importance of their business and the returns from other lines of industry.

"It is up to the master plumbers to take steps to rectify this situation by devising means to raise these prices for service, so as to make them more equitable."

**New Officers Elected**

Officers were elected as follows: Charles Fullman, president, Portland; F. M. Barr, vice-president, Salem; F. J. Rowe, secretary, Portland, and Ernest Ruedy, treasurer, Portland.

The plumbers and their wives were entertained at a banquet at the Elks Club. More than 150 delegates attended the sessions.

## WE WONDER

When the workmen own the workshops
And the railroad men own the rails,
And the grocery clerk the groceries,
And the mail clerks own the mails—

When the preachers own the pulpit
And the pressmen own the shops,
And the drillers own the oil wells,
And the jails are owned by cops—

When conductors own the street cars,
And each driver owns his bus,
Will you tell us common people—
Whatinell becomes of us?

## ANSWER

(By A. C. Rulofson)

Why, we the common people,
Simply go to L dead broke.
You may thing this sounds quit funny,
But I assure you it's no joke.

## QUICK WORK

The wife of a Lansing, Mich., hardware merchant had just received an interesting bit of news and said to her little daughter, "Marjorie, dear, auntie has a new baby, and now mamma is baby's aunt, papa is baby's uncle, and you are her little cousin." "Well," said Marjorie, wonderingly, "wasn't that arranged quick!"

## QUAINT RITES OF THE BATH

Back in Bible times came the idea of a swimming pool, and in Solomon's temple there was built the most wonderful one the world has known. It would hold 3000 bathers at one time and was used by the high priests.

Bathing is for the Finn a rite for which the first building on his farm is erected. It has a main room with a huge fireplace and a smaller room leading off this. On tub day the stones which surround the fireplace are superheated, then raked out and immersed in many pails of water, which causes enough steam to envelope the whole family in their steam bath.

Into the anteroom then they go one by one and are rinsed off with a pail of water, finally finishing the process with a vigorous roll in the snow.

As the great oven in which the baking has been done is cooling, in crawls the Russian peasant and after a good sweating has his wife throw a pail of water over him, but his peculiarity is that he puts back on the same clothing and therefore is looked upon as not clean. Saturday is the day for his bath, since an immaculate Sunday is a part of his creed.

It was once customary in some parts of France for the whole family to use the same tub of water in succession, although for the guest there was a special arrangement whereby the tub was skimmed.

One can rent a full bathing outfit from traveling vendors of the bath who heat the water while you wait and charge but a modest sum.

Time is not much of a factor in the life of the West African Bantu, who prepares for his soaking by first digging a hole in the ground into which are placed seven herbs, peppers, seeds and bushes, and finally covered by boiling hot water. Then in jumps the Bantu, to steam and steam and steam for hours. A professional kneader then takes him in hand and after an hour he is considered really fit to be called clean.

Public baths are characteristic of the Japanese, who bathe quietly and without any concern for those about. The attendant keeps the water at an even 110 degrees Fahrenheit.

Great occasions call forth the concession of the Ainu whereby he will wash his face and hands. The man of the Thibet claims that the oil of the body gives him the needed warmth and will once in a while wash away the dust from his face and finger tips.

People who live in hot climates naturally spend much time in the water, but do not use soap often. As for the Esquimau, he gets quite wet during the fishing season when he wades out for the nets, but his wife knows how water feels when she disentangles the nets for him.

L. J. Carter has recently entered the plumbing and heating business with a shop of his own, at Emmett, Idaho.

# The Stuff of Which the Pacific Organization is Made

On Friday, May 28th, our big plant Number 2, at San Pablo, was completely destroyed by fire.

The ruins cooled Saturday. Work of clearing away the debris was started Sunday.

Construction of a new plant was well under way by the middle of the week. A terrific building-pace has been set and within a month from the date of the fire the new plant will be producing at the same capacity as the old one.

In the meantime the other two Pacific plants are doing their utmost to meet the ever-growing demand for

## A THOUGHT FOR PLUMBERS

You have your regular line of goods, of course; but you are also pushing some specialty. Everybody's doing that. It makes progress slowly, as all new things do, and you rake over your brains for some idea to push it along, to boost it, to make it better known and establish a demand.

A business man was talking to me the other day, and he was a great believer in demonstrations. He thinks they are a mighty good thing for the manufacturer to pull off in the stores of his distributors, and for the merchant plumbers to extend to them a cordial welcome.

Suppose, for instance, it is some article which performs some operation, like a spigot, a sprayer, an attachment to the heater, or something of the sort. The traveling salesman could arrange to give demonstrations on Saturdays in the stores of the customers. Saturdays are poor days for a salesman to sell, because the retailers are busy that day; but would be the best days for demonstrations, because more people are in the stores.

Suppose the show window on that day should be given up to the article to be demonstrated. It would be emphasized in every way possible. It would be displayed prominently on a stand, surrounded by cards, each stating some point of merit, and a large sign would state that it would be explained inside by an expert in its use.

Inside, the salesman would have an assembled machine, and also the various parts. In his demonstration he would give a brief sketch of how each part was made, explain why iron was used here, steel there, brass in another place, and aluminum in still another.

He would then explain what it will do, how it will work, what should be done to keep it in repair, how long it will last, and how easily repairs can be made.

Just imagine what this talk and this demonstration will do! It will not only advertise the article to the consumers of that town, but it will post the plumber and his clerks all about the merits of the thing; and they will absorb and retain the information a hundred times more deeply than if they had read the literature on the subject.

They will also hear and see just how an expert salesman explains goods, interests people, and talks sales out of indifferent folks who had no intention whatever to buy.

Another point of merit is that demonstrating is not overdone. It is so seldom given that it is a distinct novelty and has all the fetching force possessed by any novel method. Advertising now is so much indulged in that extraordinary efforts must be exerted to make even the slightest dent on the hardened minds of the great public.

## WHAT THE "STRIKE-MAYOR" SAYS

I want to impress this thought upon your minds. In your business, there are but three elements to success. First, well paid labor; second, equally well paid administration; third, equally well paid capital.

Capital must receive a reasonable reward, or it sinks into hiding.

Administrative heads must be well paid, or they lose interest, initiative and efficiency.

Labor must be satisfied, must have good living conditions, and must receive the highest possible remuneration.

The dark, noisome factories must be torn down and replaced by new buildings where the sunlight of heaven pours in on the workers, for their precious eyesight must be saved.

His fingers, his legs, his life must be protected from injury by every possible safety device. His food and his housing conditions must be such that he comes to his toil whistling "My Country 'Tis of Thee; Sweet Land of Liberty."

His children must be well fed and clothed and well educated. An ignorant child is the most ignoble work of man.

The workman must feel an interest in the success of the enterprise in which he is employed.

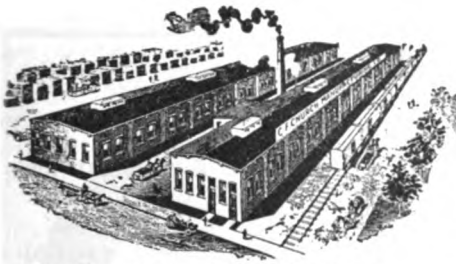
—Mayor Ole Hanson of Seattle.

## SUGGESTION FOR DRAINING A WATER HOLE

**Tell Your Customers About This— It Will Help You Both**

We had always had considerable trouble caused by water backing up from a creek and settling in a hollow in one of our fields. This water seemed to be prevented from sinking into the soil by an underlying hardpan that would not permit the water to penetrate it. This in spite of the fact that there was a line of tile not more than twenty feet away from it.

I had read of using dynamite to break up hardpan of that kind and thereby drain surface wet spots, so decided to try it myself.



I drove a pointed bar down about four feet, at which point I struck gravel. I loaded a pound of 20 per cent dynamite in the hole and tamped it in well, repeating this at four different places along the bottom of the hollow.

As a result of this blasting, the water no longer stands on the surface, but reaches the tile without difficulty and is carried away by it.

I am informed that this experiment will not work if the impervious soil is composed of one of the sticky clay types, unless the hole which is blasted out is immediately filled with gravel, cinders or broken stone to prevent the clay from consolidating again.

Don't be afraid of your competitor— learn from him. If he is doing enough business to be dangerous he is worth studying.

# The Rolling Plumber

(By Frank Farrington)

THE man who made up that old proverb to the effect that a rolling stone gathers no moss gave us something that will never go out of fashion. There will always be enough of these rolling stone workers to keep the old adage in our minds.

The here-today-and-gone-tomorrow sort of plumber or steamfitter never accumulates enough here today to have anything to take with him when he goes tomorrow to the job that looks at the distance to be better than this one.

A rolling stone, if you let it roll its own way, will roll down hill, and a rolling, rambling plumber or worker in any line who keeps moving on will soon find that he is gradually moving down the grade, and if he keeps rolling long enough, he will roll down and out, and none of the money he has handled on the way will stick in his hands.

You know the reputation of tramp printers. You know that, no matter how good a workman one of them may be, or how great the need for his services, when he once gets that roving habit fixed upon him it lasts him out, and he ends by becoming a mere tramp instead of a tramp printer.

It would be the same with a plumber. The plumber and steamfitter is no exception to the same rules that govern workers in other lines. If he keeps moving on and on he moves inevitably into the tramp class.

Of course, this inclination to keep changing jobs can be overcome at the outset, before it becomes a habit. It is nothing more than a habit formed perhaps with perfectly honest intentions of getting the best possible job.

Ordinarily the tramp worker has started in by continually looking for some easier job. He has had a lazy streak in him that has made him hope to land in a job that would be his idea of a soft snap. He lacks the sense to know that there is no such thing as a soft snap for any man who wants to get ahead or who expects to make money.

Every time a man yields to the temptation to roll along, to make unnecessary changes in his job for the sake of easier work, a position where he thinks he can take it easy, he takes a step toward becoming a rolling stone, and each change makes the next one easier. You get the habit easily.

The plumber or steamfitter who allows himself to begin roving is going to find it easy to become a tramp worker, and I don't care how good a mechanic he may be. A tramp is a tramp, whatever his line of work or whatever his ability in his trade. It never takes very long for the tramp worker to get to look like a real tramp. He cannot make enough money with his frequent changes and consequent loss of time to get to look like more than a tramp.

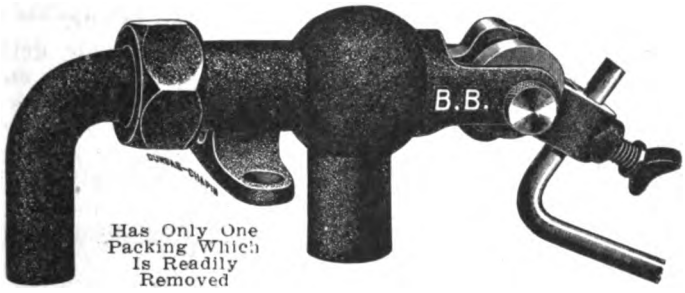
### No Boss Wants a Rover

And the more a worker moves himself along, the more likely he is to be shoved along. When he applies for a position where his characteristics are known, he is turned down. The boss knows that it costs him money every time he makes a change in help, and he will not take on tramp help if he can help it. He doesn't want that kind of employes. They upset the morale of the shop and make the rest of the men dissatisfied.

The constantly changing worker never becomes much interested in any place where he works. He never gets enthusiastic about his work. His affections are changed too often. He does not have time to become loyal to one outfit before he "up and leaves."

The waste of time and money in the country due to changing workers, men shifting unnecessarily from one job to another, is a great loss, and it has to be added to the cost of business operations, and in the end, of course, to our cost of living. New men do not do as good work until they get settled down into their jobs. They rarely earn all they are paid until some time after taking the new position. It is plain enough, then, that the business sustains a loss of considerable money from changes of help. A new man does not really pay the business a profit until he has become a part of the organization in spirit as well as merely being put on the pay-roll. A tramp worker is nothing more or less than a perambulating expense account.

The shifting worker does not, as a rule, change from one trade to another. He at least has the good sense to stick to his trade, but now and then we find the discontented sort of fellow who is always thinking that, while it is awfully hard work making a living in this trade, if he were only something else it would all be easy. This chap tries plumbing and he tries electrical work and garage jobs, and likely enough ends by becoming a blacksmith's helper. He was in line to become an expert if he had stuck to his first trade, but every time he changed he lacked more of becoming efficient in the new work, until in the end he was little more than a day laborer.



### Some Even Shift Trades

A good deal of this comes of listening to the tales of imaginative acquaintances who tell wonderful things about what they have heard of other lines of work. The fellow who tells the stories may have sense enough himself to stick where he is, but his weaker minded friend takes it all at its face value and shifts

and finds that he is still expected to work for what he gets in the new field.

If a force of men in the plumbing and heating line are to make the business successful in a high degree, they must be something more than just so many men working on the same job. There needs to be teamwork, a pulling together, just as there has to be teamwork in baseball. Nine ball players, even if they are all stars, do not necessarily make a baseball team. You have seen it tried out.

But take nine men who are fairly good players and work them together, play them in the same positions day after day and see that they learn each other's peculiarities and learn to back up one another's plays, and after a while you can take that bunch out and wipe up the earth with some all-star aggregation gathered together for the event. A baseball team or a working team will not achieve a high degree of efficiency unless they are kept working together until they feel the team spirit, the spirit of interest in the success of the business as a whole, rather than merely an interest in individual pay envelopes.

In the executive or in the selling end of the business it is particularly unfortunate to have to make frequent changes. Here teamwork is worth even more than in the mechanical part of the work, and changing salesmen frequently may easily reduce a business to a failure. The soundest business is the one that comprises an organization of men who have, for the most part, been the same individuals for years.

**Value in Same Faces**

Just in the matter of plumbing repairs certain families know certain workmen who have been in their house before and they know they like their ways and much prefer having those same men back again rather than having new men they know nothing about.

It is usually a money reason that serves as the main excuse for men making changes of job. If the reason is not directly a financial one, it is indirectly so.

Tom White reports to the boss some morning: "Mr. Jackson, the Central Plumbing & Heating Company will give me fifty cents a day more than I am getting from you, and I think I ought to go with them. You have treated me fine and I haven't any kick coming, but of course, I want to get as good pay as I can."

"That's all right," Mr. Jackson replies, without getting excited. He has had this same sort of thing happen before. He does hate to lose White though, because he is a good mechanic.

He goes on to say: "We don't want to keep you if you think you can do better, but I wish you would think it over pretty carefully. We plan to give you more money the first of January and, you know, we have some big contracts coming along, and we are going to want good men to boss them and there is a chance for you right here in our business that I doubt if you'll find with the Central people. We have a future that discounts theirs three to one.

"I know they are having trouble getting men, but I don't want to knock them and I haven't anything to say about the reasons for their offering higher wages than the going wage here. But it wouldn't surprise me to know that they cannot pay such wages for long. Think it over carefully and maybe you will decide that it is best to stick with us. You can depend on our giving you a good deal."

**Lured by Promises**

Well, Tom thinks it over, but he thinks there is some jealousy on Jackson's part as far as the Central people are concerned, and that extra fifty cents a day looks pretty big. Also there is a girl waiting somewhere and that additional pay will help that much toward getting married. In the end White falls for the extra half-dollar and makes the change.

Well, the Central Plumbing & Heating Company is an old concern, too old in its methods of going after trade. After fighting difficult conditions with increasing expenses for a few months, it gives up and the business is closed out, and there is White looking for a job, with a young wife on his hands at that.

He finds work, however, with the loss of only a week or two pay, though the new wages are less than he got from Jackson's. He doesn't feel satisfied and he looks on this new job as a sort of filler until he can find something that pays better. Finally he gets an offer from a concern he knows is somewhat shaky, and scaly in its methods. But the wages are high, and he thinks, "What's the difference as long as I do my work and get my money?" and he jumps again. This time he is getting more money than he ever got. It proves to be the top.

There is no room to improve where he is, and pretty soon the concern tells him it cannot continue to pay him so much, and he finds his wages cut. White gets sore and tells the boss he doesn't have to stay and take less money. So he goes, and he finds that looking for a job when you have a good one and looking for one when you have none are two different things.

**Moving Habit Contracted**

Of course, the rest of the story is a downhill phase, and you can write it for yourself, but that man has moved until he has moved too many times, and he has a habit that stands in the way of his getting back where he once was unless he reforms.

Men who shift around like that, even when they think they have good reasons, never get to be members of the firm. The men who are called into the office one day and given a chance for something bigger in the concern are men who put permanence and opportunity for advancement ahead of a few dollars immediate wage increase.

The advantages are all with the man who stays long enough in a shop to become a part of the outfit in every way, and to win the respect of his employers. Of course, it would be foolish to say that a man should never make a change. There are times when the opportunity you are waiting for and looking for comes in some other organization, but there are several things to be considered before you jump. The immediate pay is only one of them.

## WELL TO REMEMBER THIS

For the convenience of merchants who cannot change the habit of figuring gross profit percentages on the cost of the goods, we offer this table of equivalents. The percentage on selling price should always be in mind when comparing with expense percentage to ascertain net profit percentage.

| % Profit on Cost Price | Equals | % Profit on Selling Price |
|---|---|---|
| 20 | | 16.66 |
| 21 | | 17.35 |
| 22 | | 18.03 |
| 23 | | 18.70 |
| 24 | | 19.35 |
| 25 | | 20 |
| 26 | | 20.63 |
| 27 | | 21.26 |
| 28 | | 21.88 |
| 29 | | 22.48 |
| 30 | | 23.07 |
| 31 | | 23.66 |
| 32 | | 24.24 |
| 33 1-3 | | 25 |
| 34 | | 25.37 |
| 35 | | 25.92 |
| 36 | | 26.47 |
| 37 | | 27 |
| 38 | | 27.54 |
| 39 | | 28.06 |
| 40 | | 28.57 |
| 41 | | 29.08 |
| 42 | | 29.57 |
| 43 | | 30.07 |
| 44 | | 30.55 |
| 45 | | 31.03 |
| 46 | | 31.50 |
| 47 | | 31.97 |
| 48 | | 32.43 |
| 49 | | 32.88 |
| 50 | | 33 1-3 |
| 52 | | 34.21 |
| 54 | | 35.06 |
| 56 | | 35.90 |
| 58 | | 36.71 |
| 60 | | 37.50 |
| 62 | | 38.28 |
| 64 | | 39.02 |
| 68 | | 40.46 |
| 70 | | 41.17 |
| 75 | | 42.86 |
| 80 | | 44.44 |
| 85 | | 45.94 |
| 90 | | 47.36 |
| 95 | | 48.71 |
| 100 | | 50 |

Percentages other than those given can be closely approximately by reading between the lines. Thus 82 per cent in cost would be about 45 per cent on selling price.

## "NO ARITHMETICER"—SAFETY

"I am not much of a mathematician," said Carelessness, "but I can add to your troubles, I can subtract from your earnings, I can multiply your aches and pains, I can divide your attention, I can take interest in your work and discount your chances for safety."

Is it possible to increase each man's welfare by decreasing each man's production?

William Bigelow has acquired the interests of his former partner Arthur Estey in their plumbing business at Jerome, Arizona.

The Hahn Plumbing Shop at Ellensburg, Washington, has moved into part of the quarters of the Carr-Howard-Cram Co., of the same place.

The Gem County Plumbing & Heating Co., has recently been established at Emmet, Idaho. L. J. Carter, an experienced plumber, is president of the company.

The Glendale Plumbing Co. has been organized at Glendale, Arizona, with W. H. and Guy R. Sheets in charge. It was formerly operated by R. L. Fuller, of the same place.

The master plumbers at Helena, Montana, have recently entered into a new agreement with the journeymen covering the wage scale and working conditions for a year to come.

C. A. Keeble has moved his plumbing shop at Gallup, New Mexico, into new quarters, and is now situated so that he can take care of a larger stock and conveniently handle all of the needs of his customers. The new shop adjoins his residence.

## CANADA'S MEMORIAL WORKSHOPS

The people of Canada have taken a most commendable and practical way of commemorating their countrymen who gave their lives for the Allied cause in the late world war and of showing their appreciation of the service rendered by survivors of the Canadian soldiers and sailors. "Memorial Shops" are being established for the training of disabled soldiers in order to bring them into the way of using gainfully such parts of their devoted bodies as the great struggle left to them.

This is putting public money and private contributions to a high and eminently common sense purpose. The shops in themselves serve as well as anything material could in the way of monuments, properly inscribed, while they are continually active not only in reducing the cost of reconstruction, but in returning to usefulness hundreds of young men who otherwise might be a burden to themselves and others.

The intensely practical phase of this plan ought to make a strong appeal to Americans. We have had suggestions for national memorials to the men of our army and navy who served in the great war, all the way from imposing, but practically useless, piles of marble, to great public highways. Why not turn the cost of such memorials into workshops for the training of our own incapacitated fighters? We are spending a tremendous amount of money just now as a nation and as individuals uselessly or wastefully. Why not divert part of it into some adaption of the Canadian plan and thus turn expenditure into noble and profitable investment?

---

"Dear Teacher—Please excuse Mary for being absent yesterday. She got caught in the rain and got wet in the A. M. and had a bad chill in the P. M."

---

The Soule Plumbing & Heating Company of Billings, Montana, has secured the services of J. M. Fleming of Denver, Colorado, an expert plumbing and heating engineer. This is in line with the policy of the Soule Plumbing and Heating Company to render to its customers the very best service available.

# Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.

Germak & Payne have purchased the stock of the Williamson Hardware Company at Kennebec, South Dakota.

---

One of the promising new hardware institutions of the Northwest is the Christiansen Hardware Company at Nampa, Idaho.

---

The Hay Hardware Co. at Lexington, Kentucky, has met with such demands for goods that it has found it necessary to increase their stock to $40,000.

---

One of the up-to-date hardware stores in Oklahoma is the Norman Hardware Company at Frederick. The particular feature of this institution is its modern store equipment.

---

Roy and Ray Thomas, of Canon City, Colorado, owners of the Thomas Hardware Company, have purchased the Mansfield business and plan to operate both stores from now on.

---

The Midland Hardware Company, at Billings, Montana, has taken over the retail stock of the Ryniker-Winter Hardware Company. The Rvniker Hardware Company will be conducted on a strictly wholesale basis.

---

Marshall-Wells, Ltd., of Canada have established Provincial headquarters at Vancouver, British Columbia.. J. T. Elson, the new manager, states that the company will ship extensively from that port to Australia, New Zealand and the Orient.

---

The Steubenville Hardware & Supply Company at Steubenville, Ohio, is forging ahead by leaps and bounds. This is an institution which handles both wholesale and retail business, and has increased its capital stock from $175,000 to $300,000 recently.

ELECTRIC COMPRESSOR

EVIDENCE

This unit electric air compressor is rated CONSERVATIVELY as delivering six cubic feet of free air per minute. It has been developed especially for pneumatic truck tire inflation, and pumps to 200 pounds pressure.

The 2 H.P. Motor, gearing and compressor are mounted in one housing, and all bearings, gearing and compressor piston and cylinder are grease-lubricated, eliminating the necessity of maintaining an oil level and frequent refilling of oil cups.

Motor, bearings and compressor are air-cooled by the patented Black & Decker method. There is no water to evaporate in summer and freeze in winter, and no water tank with attendant piping and complications.

Complete enclosure obtained by Black & Decker unit construction affords protection from abuse, excludes foreign material from moving parts, and maintains correct alignment. No exposed gearing or belting.

The No. 46 Electric Compressor inflated the Goodyear 44x10 truck tire shown in this illustration from flat to 140 pounds pressure in 6.3 minutes, which was the average time during thirty consecutive inflations. This test was made by the Development Department, Highway Transportation Division of the Goodyear Tire & Rubber Co., Akron, Ohio, who are interested in seeing that the best possible service is accorded Goodyear owners.

In tests of our own we have run these No. 46 Electric Compressors for twenty-four hours continuously against 150 pounds pressure without overheating or any appreciable loss of efficiency or noticeable wear.

We can supply this same machine with a capacity of 12 cubic feet of free air per minute for low pressure work, such as paint spraying, operation of pneumatic tools, etc.

# *Retails Profitably at a Popular Price*

Probably a forked stick and hot stone were the first cooking utensils ever used. As civilization advanced, man improved his cooking devices. Now, in this twentieth century, aluminum is accepted as the ideal metal for kitchen utensils. It is durable, takes heat readily, holds it long, and neither chips nor cracks.

VIKO, The Popular Aluminum, is a better aluminum ware. Of improved design and sturdy construction, it not only sells readily but gives perfect satisfaction in use. And it can retail profitably at a popular price. There's a VIKO utensil for every kitchen need. For dealer's proposition—

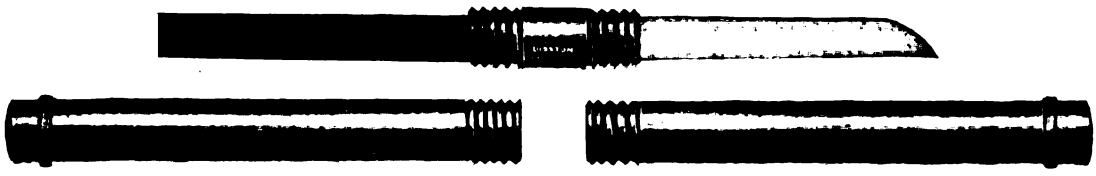
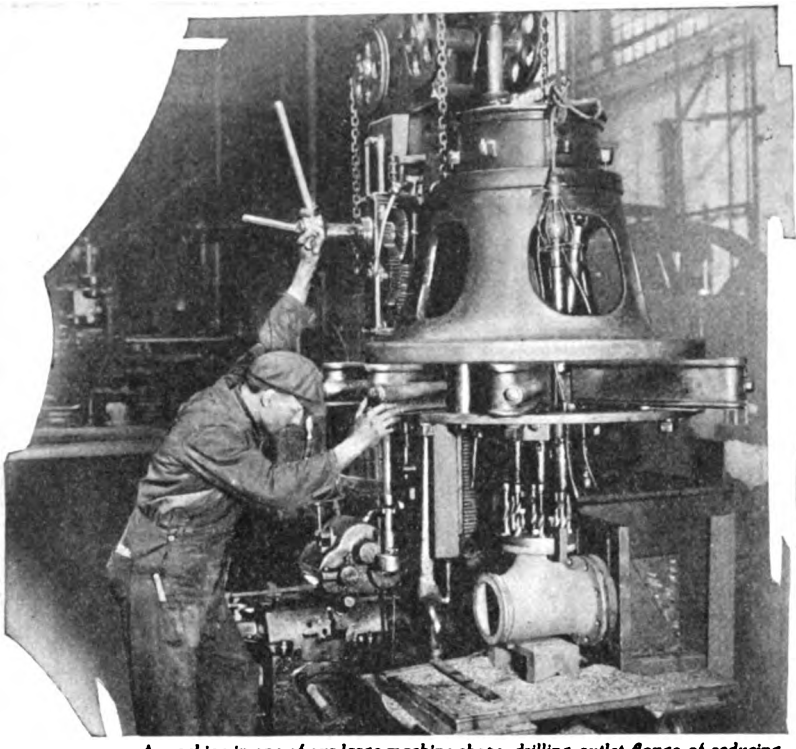
# DISSTON
# "KLEEN-SPARK"

Dirty Spark Plugs, due to carbon deposit from combustion of oil and gas, certainly are a great source of annoyance. They result in frequent misfiring and consequent loss of power.



Disston, realizing the need of a compact, complete, efficient tool for the purpose of cleaning spark plugs, has invented an instrument called "Kleen Spark." It is a double tool in one piece, one end a magneto file and the other end a knife blade. Handle covers fit over either end. The tool assembled is not much larger than a pencil.

After the plugs have been soaked in kerosene or gasoline, scrape the carbon from inside the porcelain with the knife blade. Clean and sharpen up the pitted points with the file, then reset, using the thickness of file as a gauge for the proper distance between contact points, to get the best results from the spark.



The end of the knife is beveled like a chisel for cleaning gummy, oiled surfaces of delicate mechanism.

Automobilists, motor-cyclists, motor launch devotees, aviators, farmers for their tractors, engineers and mechanics, in fact anyone working around an engine that has a spark plug, will find that this tool fills a long-felt want.

# When You Sell Pipe Fittings—

Put yourself in the place of the man with the wrench.

Poor fittings on the job mean extra work for him.

Poor fittings after the job is done mean that he has a dissatisfied customer. Often the installation has to be done over. The kick goes through this man who did the job straight back to the man who sold the fittings. You know this from experience.

Why take the unnecessary chance? You can sell Grinnell perfect fittings and save all concerned time, trouble and money.

## *Why Grinnell Fittings are Better*

We started to make fittings for our own sprinkler work, because we had to. Our work required better fittings than we could buy. We decided if we could make fittings that came up to Grinnell Automatic Sprinkler requirements, that we would put them on the market. Here's the rest of the story in a nutshell—Grinnell fittings made good for us and they have gone on making good wherever they have been installed.

Every blank and every finished piece is rigidly inspected. We sell from the same stock that we use ourselves. Grinnell fittings are insurance of universal satisfaction.

In normal times we always carry a big stock of "G" fittings and National Pipe. We cut and thread to sketch, and we shall be glad to show you what Grinnell service means.

# CASTERS
## ONE SOURCE OF SUPPLY

## "Harvard"

The "Harvard"—a steel ball bearing truck caster.

This all steel caster has numerous advantages over the ordinary iron caster as it is stronger, although much lighter in weight, and is practically indestructible.

Made of extra heavy gauge steel throughout, fitted with cast iron wheel and heavy steel axle, hardened steel horn, and equipped with large size ball bearings.

It meets the demand for an extra strong yet inexpensive truck caster. For service in the factory or warehouse it cannot be equalled.

# "That's the Brace for Me"

says your customer. "It's a Millers Falls. I have one of their hand drills that I've used for over ten years and it's a real satisfaction. Their tools are made right."

Put a Millers Falls tool in your customer's hands. Let him look at it, handle it, get its "feel" and perfect balance. It will be your strongest sales talk.

This inner goodness of Millers Falls tools, their strength, sureness, ease of operation, make them reliable friends of skilled workmen or amateurs. And thousands of skilled workmen and amateurs are being told about Millers Falls tools through a campaign of national advertising appearing every four weeks in the Saturday Evening Post and other publications.

You should get the full benefit of this advertising by handling the full Millers Falls line. Confidence in the tools you sell means confidence in your store—steady customers.

Whether hack saws, braces, hand and breast drills, auger bits, mitre boxes, vises, in and out screw drivers, or any others of our line, you will find that Millers Falls tools make lasting friends for you.

**Send for our helpful little handbook, "How to Sell Tools"**

"That's the Brace for Me"

*Insert shows one-half page advertisement from the June 26th, Saturday Evening Post*

Millers Falls Breast Drill, No 97. "The Mechanic's Favorite" (shown here) is the most complete breast drill on the market. A great time saver. Five different and distinct actions. Can be used in the most inaccessible places. Its ball thrust bearings give it easy operation and long life. It won't get out of order

## Jobs you can do —yourself

IT is the odd jobs that have to be done around the house and on your car that help run up the cost of living.

Simple jobs, such as putting a horn on your car, are easy if you have the proper tools.

You don't have to be a mechanical genius to drive a nail with a hammer, but you do have to have the nail and the hammer. You can drill holes in wood or metal if you have a drill—otherwise, you have to hire someone who has a drill.

The present-day cost of a single job requiring *only* the use of a certain tool, and a man's time, is often more than enough to cover the purchase price of that tool.

Think of "jobs" in terms of the tools required to do them and you will quickly see the common sense of acquiring tools instead of hiring skilled labor to do simple jobs.

Any mechanic, carpenter or hardware man will recommend "Millers Falls" every time when asked about braces, auger bits, hand and breast drills, mitre boxes, hack saws and other boring and cutting tools. For fifty years Millers Falls Tools have held the highest esteem of users and sellers of fine tools.

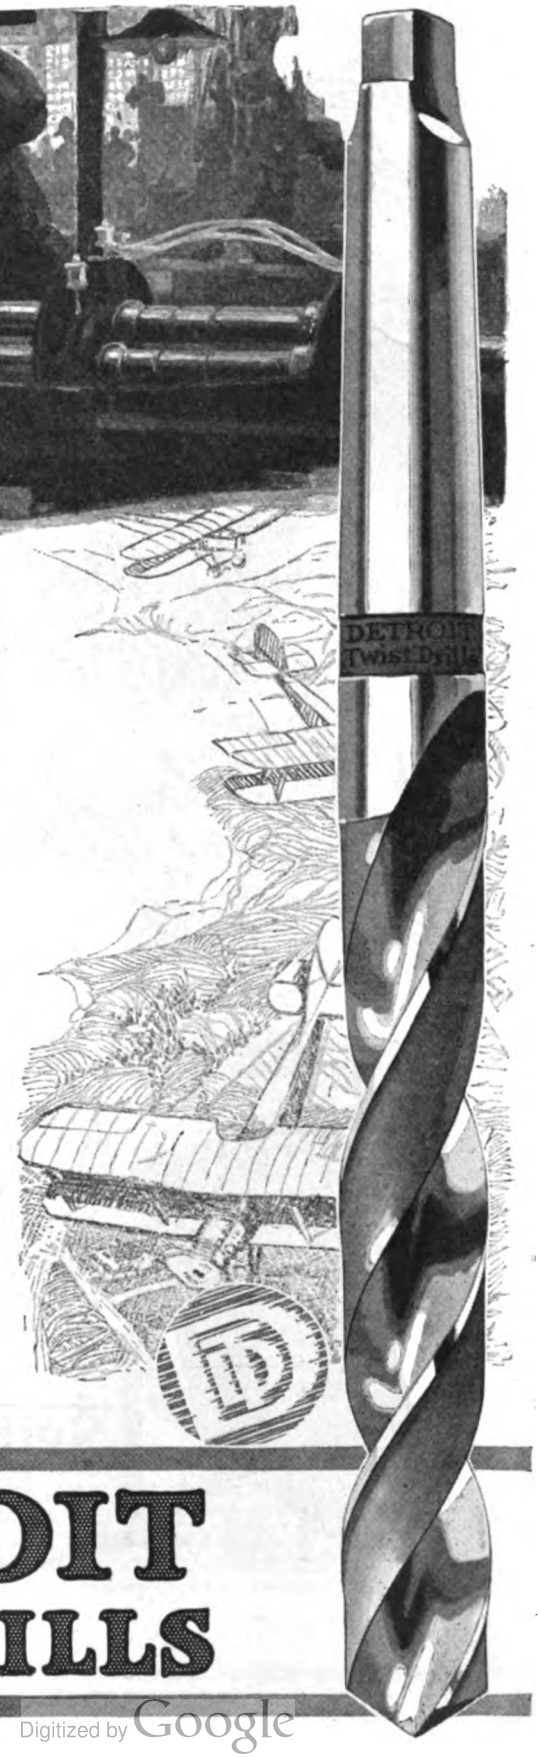
# Drilling Oil Holes in Airplane Crankshafts



The universal demand for higher efficiency airplane engines requires the development of more positive means of lubrication. This requirement is met by drilling oil holes in the crankshaft. These holes provide the means through which a more adequate and certain supply of lubrication is furnished.

This work, drilling three 7/8" to 1" holes in one operation, demands tough, accurate drills. For the breaking of a drill or the drilling of an inaccurate hole means scraping the crankshaft.

Builders of airplane engine crankshafts use Detroit Twist Drills because these drills give accurate holes with less regrinding and breakage and less cost for power.

## SELL HACK SAW SATISFACTION

Selling hack saw *satisfaction*, not merely hack saw blades, is the Starrett policy. We want every package of Starrett blades that goes across your counter to be the means of gaining you a satisfied customer.

To show hack saw users how to get the full value out of the blades they buy is the idea back of "Hack Saws and Their Use," the newest Starrett Book.

Based on a long series of experiments at the Starrett plant, checked with the tests made by other manufacturers, it is the first practical book on that much misunderstood tool. It has 64 pages, and many charts and diagrams.

"Hack Saws and Their Use" is furnished to dealers for free distribution. Give it to the men who buy blades from you. It will bring you big returns in satisfied customers.

# The Standard Razor

## Is Gaining in Popularity

Thousands of men write us asking where Genco razors can be purchased. These men have read the Genco advertising in Saturday Evening Post and a list of other national publications.

Advertising and the experience the men themselves have had with different types of shaving instruments have convinced them that the good old fashioned blade is the dependable one.

The men have noted that the barber—the professional shaver—continues to use a razor of the Genco type.

They know that to deliver a really comfortable shave any razor must be stropped and they know that Genco razors are made to strop.

They are familiar with our guarantee "Genco razors must make good or we will."

**The Demand for Genco Razors Continues to Grow.**

Profit by Genco advertising and the demand it is creating. Ask your Jobber to supply you with Genco Razors. If he cannot, write us.

# The Reason—
# Made Right for 79 Years

In a Connecticut hardware store the dealer's "handy man" was setting up wheelbarrows for Spring trade. He was using a Coes "Knife-Handle" Wrench.

A customer entered—bought a screw-driver and walked to the rear of the store where the man was at work—looking down he noticed the wrench, picked it up and remarked: "I see you use a Coes Wrench yourself."

"Yes," replied the "handy man," "we find the Coes the Easiest Wrench to Use, as well as the Easiest Wrench to Sell." "I need just such a wrench myself," said the customer, and be bought one.

It is a fact that when Hardware merchants want a wrench for their own use they usually go for the Coes.

Your jobber will supply you.

# Sargent Screen Door Closers

## *Will sell till the last fly is gone*

DON'T stop pushing Sargent Noiseless Screen Door Closers until the last fly has made his exit. Not until then will people be relieved of slam-banging screen doors.

It is never too late in the summer to sell a Sargent Noiseless Screen Door Closer. To have relief for slam-banging screen doors for a month is alone worth the cost of one. But when you consider that you are selling a closer that works equally as well on any light inside door, you are really doing your customers a favor. Don't forget to mention this fact when you sell a Sargent Screen Door Closer. Tell your customer that it can be used on closet doors, lavatory doors, storm or telephone booth doors.

Sargent Screen Door Closers are just as dependable as other Sargent products. They close doors quickly, quietly, and firmly. There is no rebound to them to put doors, hinges and locks out of commission.

Be sure to carry a good supply of Sargent Screen Door Closers. Push them. Display them. Write us today for window cards and other display material.

# THE HONOR OF THE ACCO FAMILY

**Weed Chains for Motor Cars!**

**Anchor Chains for Ships!**

**Chains for Railroads!**

Devices that make travel safe on land and sea, that can be absolutely depended upon to protect human life, are typical of the nature and quality of Acco products.

The workers who make up the Acco family know they are doing more than making commodities merely to be sold.

They know that it is their work that holds millions of motor cars and trucks to slippery roads.

It is their work which enables mighty ships to ride safely at anchor, whether in harbor or helpless on a lee shore.

It is their work which makes possible the safe operation of thousands of railroad trains.

This gives the work of the Acco family honorable and distinctive responsibility which is reflected in every link of every Acco product—"From Plumbers' Safety Chain to Ships' Anchor Chain."

In the Acco family, loyalty to the work itself is rated above everything.

This is true of every worker whether the job is directing all of the numerous plants, or operating a 2,000,000 pound tester, or a typewriter.

The honor of the Acco family is in the hands of each member of it, even to the youngest worker.

These are the reasons why it is possible to say not only that "Every Weed is Guaranteed" but that every link in every chain made by the American Chain Company will hold for the purpose intended.

# Six "Best Sellers"

Anything that increases sales and cuts the cost of doing business, is worth looking into, isn't it?

That's what this Pexto Snips Display does.

It boosts sales by putting a choice assortment of this century-old line where your customers can't miss them. With it you'll sell snips to customers who hadn't thought about buying them or had forgotten they needed them.

It lowers costs by reducing the time and labor of making sales. No rummaging around in drawers to find the snips you want to show. No fussing with catalogs to make sure of numbers, sizes and prices.

All the information you or your clerks will need is right on the back of the display, classified so as to be read at a glance. Stand it up or hang it up, use it in the window or on the counter. It shows the six "best sellers" of the complete line of twenty-five.

## The Sultan's Gate, Centuries Old, made *Useful* by HINGES.

HUNDREDS of years ago Armenian Craftsmen began work on the Sultan's Gateway at Constantinople. Today it stands completed—an architectural gem of the Near East. Into its beauty the life work of many artists has been moulded.

The usefulness of this wondrous gate depends—just as that of any other door—on hinges. These were made to give the gateway life; to fulfill the purpose of its creators—yet in doing so to lend artistic harmony both by design and by work effectively done in hushed silence.

This worthy purpose embodies the creed of every McKinney Hinge. Whether for modest garden gate or monumental cathedral door, they combine uninterrupted service with artistic design.

The McKinney Manufacturing Company at Pittsburgh, Pennsylvania, has been manufacturing hinges and butts for fifty years. These products are the standard-bearers in their field.

Somewhere in your city, very likely at the most prominent hardware store, you can buy hinges stamped with the name "McKinney". Remember this name, when you consider building or repairs and buy accordingly. Then you will be rewarded by years of unfailing hinge usefulness—you will have settled the hinge question for life.

The name McKinney is important!

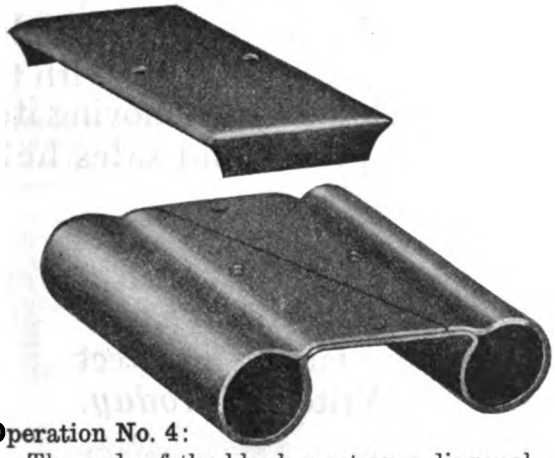
# Center Web Construction of the Lawson Double Acting Nu Jamb Spring Hinge

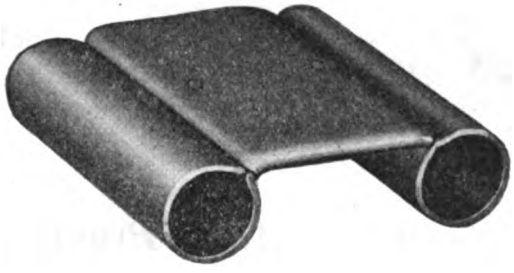
**Operation No. 1:**

The body of the Lawson Nu Jamb Spring Hinge is made of one piece of heavy metal. It is first cut in the proper shape and punched.



**Operation No. 2:**

The blank is bent preparatory to forming the spring barrels and center web.



**Operation No. 3:**

Showing how the ends fold over to form the extra heavy center web construction.

**Operation No. 4:**

The ends of the blank meet on a diagonal line across the center web, giving extra strength. The reinforcing cover plate is in position ready to be applied.

**Operation No. 5:**

The cover plate is riveted to center web, making a solid three ply construction. The ends are then crimped over both thicknesses of center web, making a heavy reinforcement. This overcomes a weakness usually found in other spring hinges.

**The strength of the center web is one reason why Lawson Nu Jamb Springs are the best to be had.**

*This double-page Saturday Evening Post spread appears September 18th*

# Selling *KEEN KUTTER* to Your Trade

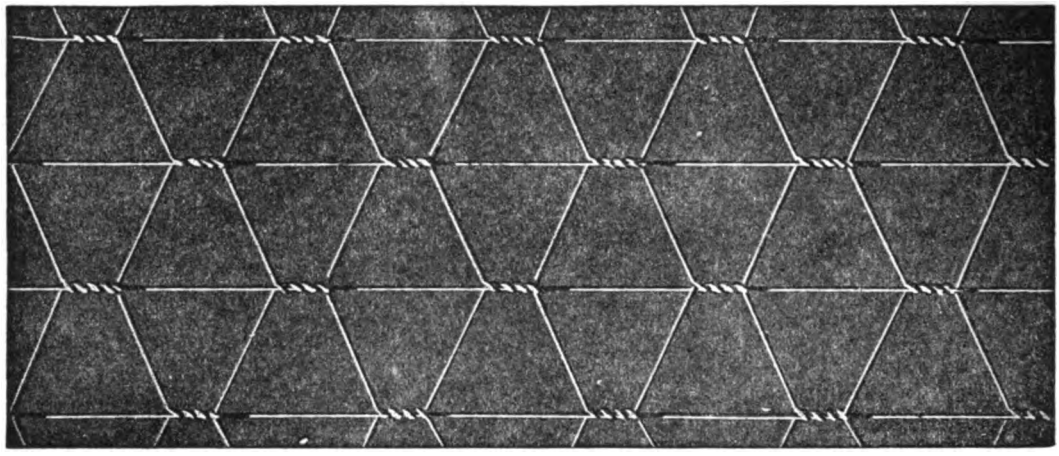
**Here are some of the Publications we are using to tell your trade about *KEEN KUTTER* quality:**

The Saturday Evening Post
The California Cultivator
The Utah Farmer
The Oregon Farmer
The Idaho Farmer
The Washington Farmer
The American Federationist
The Carpenter

Your tool and cutlery trade, every class of it, is being reached by the Keen Kutter advertising.

Double-page spreads in The Saturday Evening Post reach practically every class from the skilled mechanics to the women of the homes.

And the men who buy tools and make their living with them see full page Keen Kutter advertisements regularly in The Carpenter which reaches practically every Union carpenter in the country. There are pages, too, in the American Federationist, the official publication of the American Federation of Labor.



Then out through the farm homes of all the West, Keen Kutter advertising appears in the leading farm papers.

Cash in on this tremendous hardware advertising campaign—put it to work directly for you. Talk it over with our salesmen—see how thoroughly we equip you with window trims, direct advertising matter and similar means of making Keen Kutter advertising speed up turnovers for you.

# Ideal Poultry and Rabbit Fence

## Is a Fence and Not a Netting

The horizontal wires in the Ideal Fence make it possible to stretch it perfectly, and FEWER POSTS ARE NEEDED and NO TOP OR BOTTOM RAIL. Posts may be set a rod apart, and if the fence is well stretched it will be strong and effective.

Hexagon mesh poultry netting is good and has many uses, but it cannot be stretched without pulling together in the middle, hence top and bottom rails are necessary and the posts must be close together.

Like all fences the heavier the wire the longer it will last, so we recommend the heavier styles; but for many purposes, like protecting a young orchard or vineyard where a cheap fence is good enough, the No. 20 will do the work effectively and is less expensive when erected than any other fence or netting with the same size of mesh.

For permanent poultry yards the heavier styles are better and cheaper, life of fence considered.

In all weights and styles the horizontal wires are two inches apart. The size of mesh is governed by the spacing of the mesh wires. Every style has a cabled selvage both top and bottom.

The New Santa Fe Station at San Diego, Cal., Said to be the most beautiful R. R. Station in California. Toncan Metal used for all sheet metal work.

# Many Great Railroads are Large Users of Toncan Metal

The Santa Fe has used Toncan for many years for sheet metal work on stations and for other purposes.

In a recent letter, Mr. A. A. Mathews, Chief Engineer of the Cotton Belt Route, states that The Corrugated Toncan Metal used on their shops at Pine Bluff, Ark., in 1911 is still in perfect condition.

The Missouri Pacific has used large quantities of Toncan all along their line for covering trestles—a severe service that requires the best obtainable.

For every severe sheet metal service, Toncan offers great durability, splendid forming qualities and all round satisfaction—Write for our sheet metal book.

PIONEERS IN THE HARD-EDGE, FLEXIBLE-BACK BLADE

# "50-50"

**"In reviewing our past pleasant business relations I look back with a great deal of pleasure to our connections with you, as yours is one of our real 50-50 accounts which we value very highly."**

(Name on request)

Exactly what you want to know about any manufacturer whose product you are expecting to handle. Not only that the product is good, and that the price is right—but that the Manufacturer himself is right, that the whole Organization is right, and agreeable to do business with—that the manufacturer's dealings with his jobbers and thru them to the consumer, are right—his sales policy, etc.

That is why this letter coming from a well known Napier Hack Saw Distributor appeals. It tells something that you can never estimate or guess at. It gives you information on a point that you can only learn by experience. Because when a jobber in these "trying times to jobbers" says that Napier "is one of our real 50-50 accounts which I value very highly" it means something of interest to every distributor handling or expecting to handle Hack Saw Blades. This point is even more important than the fact that the Napier Saw Works have behind them a generation of manufacturing experience building good Hack Saws. It is more important than the fact that these blades are used or specified exclusively by most of the largest industrial plants of the country. It is even more important than your knowledge that a big demand exists, nationally and internationally, for Napier "Quality" and "Expert" Blades.

Practically speaking, it is the reason why we decided recently to drop the manufacture of Band Machines, Band Saws (and a few other products we made in the past in addition to Hack Saws)—to enable us to concentrate entirely and without restraint on the building and marketing of "Quality" and "Expert" Hack Saws. "Quality" and "Expert" are worth it. We have found the business big enough to occupy our exclusive attention. And now that we have the long-sought opportunity, we aim to extend, as we have already started in to extend, the Napier 50-50 proposition on Hack Saw Blades where formerly it had been impossible for us to do this.

This, then, is the time for every dealer who wants a good Hack Saw account to get in touch with us. We are ready to answer your inquiries.

**This window display by a big Fifth Avenue New York store made profitable selling history**

THIS window display should impress every retailer with the selling importance of that champion of little, big profit makers—**Mendets**—the patented patch.

Over half a million Mendets are sold every week. One chain of stores **alone** sells over twenty thousand packages a week.

Mendets produce instant sales wherever displayed. They appeal to thrifty housewives, whether on 5th Ave., New York, or Main Street in a town in Oklahoma.

Mendets go on with a twist and instantly mend—water-tight forever without heat, solder, cement or rivet.

They mend graniteware, aluminum, iron, tin, and all rubber goods.

## Mendets Retail at 10c and 25c the Package

Your jobber can supply you with Mendets in the Silent Salesman Counter Cabinet at an attractive price. Ask him, or write us for the name of a nearby jobber.

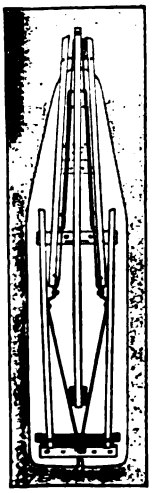
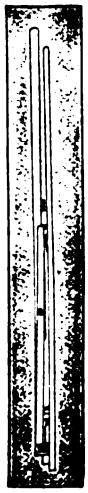
# *Here are Steady Turnovers and Certain Profits*



THE new and improved Rid-Jid Open End, folding Ironing Table answers a great need. It is the most convenient, most logical ironing table ever built. Every woman will want one as soon as she sees its excellent points.



Just look at these features! The Rid-Jid weighs only 14 pounds. It folds neatly—2½ in. thick. It can be carried anywhere, stored in almost any place. Yet it is so strongly built that you can sit on the open end and it will not tilt. It cannot wabble, sway nor creep from the movement of the iron. The open end permits a full skirt being put over it without catching or obstruction. Every joint is protected by a metal plate —assuring long life and continued efficiency.

Isn't that the best ironing table you ever heard of in all your life? Can't you sell a whole bunch of them? **You bet your life you can**—to practically every women customer you have—**and her friends.**

The Rid-Jid is a real, live proposition with a generous margin of profit. Let us tell you about it. Send us your name and address today.

THE RID-JID PRODUCTS CORPORATION
Waukegan, Illinois
Successors to Oregon Woodenware Mfg. Co.

The Rid-Jid folds up compactly—as neat as a knife. It fits nicely behind the kitchen door or tucks snugly out of sight in the closet.

# Early Orders Insure Delivery

THE meager supply of goods in the merchant's warehouses, the curtailment of production through strikes, the large unfilled tonnage on the books of manufacturers, the refusal of many mills to accept any new business offered and the allocation by the large corporations of but small percentages of former purchases for the first half of the year to jobbing customers, coupled with numerous freight embargoes which the railroads are forced, through labor troubles and car shortages, to put into effect, has brought about an acute scarcity of many lines of merchandise.

WE see no possibility of immediate relief from these conditions and we urge all of our customers to cover their Fall requirements by placing orders early.

WE do not suggest over-buying or speculating, but feel it is an opportune time to place your orders freely for your Fall requirements at present prices.

# Silverware Draws Women to Your Store

High-grade Flatware, carefully kept and suitably and attractively displayed, will do more perhaps than any other agency to take your store out of the for-men-buyers-only class.

Do you realize just how desirable feminine patronage is? Have you done what you can to get it?

Don't tuck away a few sets of Knives and Forks in a dark corner and expect a searching party to dig them up. Give the ware a prominent place, keep it in condition, handle it as silverware, not as nails, make special displays of it. It will impress the woman shopper to know you handle the Flatware that matches the Hollowware she has seen illustrated in our advertising.

Write our Advertising Department for advertising and display helps.

# There's a Double Guarantee back of all

# IRON HORSE METALWARE

"As Strong As The Name Implies"

The guarantee of the Rochester Can Company, manufacturers of Iron Horse Metalware, and also the guarantee of your jobber who supplies you.

An Iron Horse Metalware sale is never complete until the purchaser is thoroughly satisfied.

And it is upon this broad guaged business principle that Iron Horse Metalware has forged ahead with tremendous strides until today it is nationally recognized as the "Gold Standard" of metalware value.

Have you a good supply of Iron Horse Garbage and Rubbish Cans, Sprinklers, etc., to take care of the demands of this busy Summer season? Let us suggest that you check up carefully and if not place your order at once to insure prompt delivery.

*A copy of our complete catalogue will be mailed you gladly on request.*

## "HURWOOD" Screw Drivers

### Unsurpassed for Strength and Durability

Blade, Shank and Head are one piece of special steel. Two patented projecting wings under the head together with a rivet which passes through the ferrule, handle and shank, securely fastens the Blade in the Handle, preventing its turning.

The Blades are finely tempered and well finished.

The Handles are polished and stained black.

Many styles and sizes from which to select your stock.

FOR over 88 years the Simonds Manufacturing Company has maintained a reputation as a leader in the making of edge-holding tools. With this experience and quality of steel, plus workmanship, it is not strange that the Simonds Hand Saw should be a high-class product. In every section of the world Simonds Saws are known and used, both by carpenters and handy men. They are pronounced by users to be the best of the better saws. Accordingly Hardware Dealers appreciate the value of such a line. Satisfied customers result from Simonds Saw sales, and reasonable profits come to dealers.

LAWN MOWERS

# *Announcement*

In sending out revised lists and discounts for PENNSYLVANIA *Quality* lawn mowers for the season of 1921, we wish to relieve our jobbing distributors from all blame in failing to deliver enough of these machines to supply the unprecedented demand which there has been for PENNSYLVANIA *Quality*, and to advise that, although we have refused almost all export orders, we have not found it possible to get production, through our failure to receive the necessary materials or get adequate supply of labor.

For the season of 1921 we are only safe in promising to give our old customers the benefit of our best efforts and to urge early specifications on the part of both dealer and jobber.

# FACTS
## Worth Remembering

In ordering Window or Fly Screen Cloth from your Jobber don't forget these vital facts:

The amount of **service** and **satisfaction** your customers get out of Screen Cloth depends almost entirely upon the materials used and the methods employed in the making. The label which identifies every roll of the "Perfect" Screen Cloth is your guarantee of the best materials, accurate mesh, the proper width and a full 100 lineal feet to every roll.

That's why dealers buy all of our wire products, Screen Cloth, Hardware Cloth, Poultry Netting, Fly Traps, etc.

# Think of the Homes in Your Community!

Think of the doorways in those homes! Think of the high reputation for valuable suggestion and the wonderful business prestige you can build up; think of the beauty, convenience and economy you can impart to those homes, by putting into their doorways—

## Richards-Wilcox House Door Hangers

The dining-room doorway in the illustration is only one example of a happy application of R-W House Door Hangers.

Closed, this doorway gives the artistic appearance of French doors. Note how the glass paneling harmonizes with the glass paneling of the cabinet doors.

Open, the door is out of the way and out of sight.

The pantry door is another example of a difficult problem solved by R-W House Door Hardware.

There are others; closet doors—parlor doors—hall doors.

*A direct mailing campaign on R-W House Door Hangers among the builders, architects and home owners in your community would be profitable to you*

*We will furnish you illustration inserts and suggestions*

## The Only Screw Holes in the World

### The "Hole" Problem

The advantages of Screw Holes are: they can be used without damage to receiving material; they enable you to Standardize to wood or machine screws in all materials; they are made of brass and will not rust under atmospheric or moisture conditions; special tools are not needed for using them in any material; they can be used in any place a screw can be used; no special screws are needed—these Screw Holes fit any wood screw or machine screw now in stock; they make the neatest possible job in any material; they are endorsed by all dealers in screws, and by all users of screws; in spite of the high cost of brass, Screw Holes are yet cheap; they make everlasting holes in any material, and anyone who can drive a nail can use them.

You must stock Screw Holes, for your trade demands them.

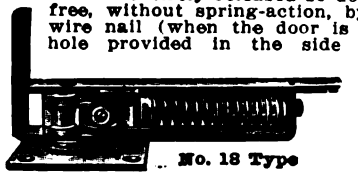
# BOMMER

DOUBLE ACTING
SPRING BUTT HINGES



have the weight supporting bearings correctly located to liberate the action of the springs, reducing breakage and increasing spring power, preventing unequal wear of the barrels, and giving practically unlimited durability.

**Bommer Floor Surface Spring Hinge**

**Has Release and Holdback Features, Ball Bearing and Alignment Device**

The most durable hinge of its type; holds the door open when swung to 90 degrees. The spring-action can be entirely released so door will swing free, without spring-action, by inserting a wire nail (when the door is open) into a hole provided in the side plates. The spring-action can be restored by withdrawing the nail.

No. 18 Type

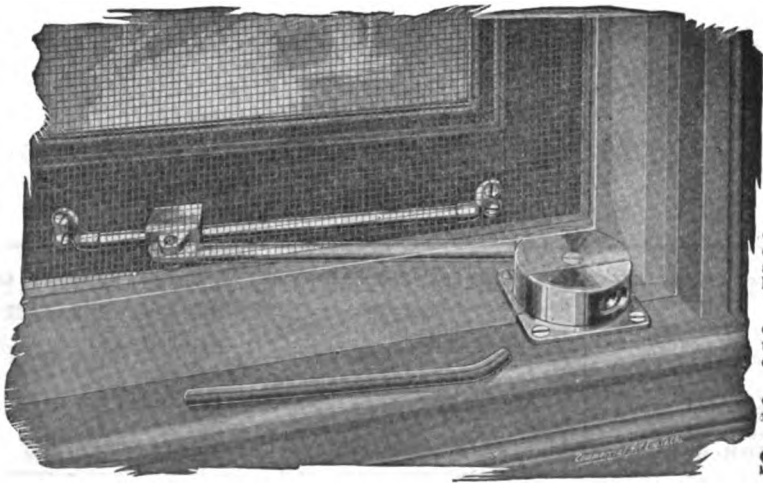
"Highest Award (Medal of Honor) for FILES and RASPS, Panama-Pacific International Exposition, San Francisco."

# "Forstner" Brace and Machine Bits

**For Fine Carpenter, Cabinet and Pattern Work**

**SPECIALLY ADAPTED FOR HARDWOOD WORKING**



The Foster Labor Saving Auger Bit, unlike other bits, is guided by its Circular Rim instead of its center; consequently it will bore any arc of a circle and can be guided in any direction regardless of grain or knots, leaving a true polished surface. It is preferable and more expeditious than chisel, gouge, scroll-saw, or lathe tool combined, for core-boxes, fine and delicate patterns, veneers, screen work, scalloping, fancy scroll twist columns, newels, ribbon moulding and mortising, etc.

**Manufactured by THE PROGRESSIVE MFG. CO., Dept. "A," Torrington, Conn.**

Enquire of Your Hardware Jobbers, or Write Us Direct. Supplied in Sets Write for Catalogue

Handle Detached. Cut shows Right Hand Casement Adjuster

# Superior Casement Adjuster

For windows that open out
Operates without disturbing the screen

Superior Casement Adjuster is the most convenient to operate because all that is required to unlock and move the window is to simply move the handle; when you let go the handle the window is locked automatically.

Superior Casement Adjuster is the strongest because it locks on the rod fastened to the window and thus combines the strength of the two rods.

Superior Casement Adjuster holds the window firmly at any angle and does not allow the window to rattle.

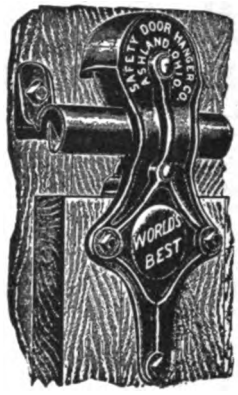
Men with foresight have figured it out that it pays to shave themselves and save time, money and "tips." This accounts for more men using safety razors today than ever before, because the "safety" saves the most time and "Time is Money." A

## HATFIELD COMPLETE SHARPENING MACHINE



will bring you in lots of blades to be sharpened, because this well known machine sharpens all makes of safety razor blades and sharpens them quickest.

It is the only machine that sharpens blades with a lateral motion —the one correct way. And it turns them out keenly and smoothly edged for a perfect shave at the rate of 12 every 5 minutes.

Get a Hatfield and get the profits which average from $7.00 to $15.00 per day.

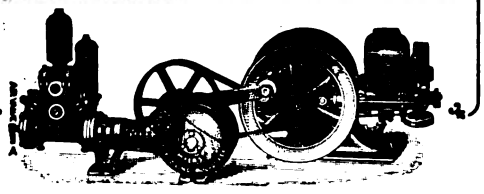
# MYERS SELF-OILING POWER PUMPS

Modern in every detail and designed for economical and efficient pumping service.

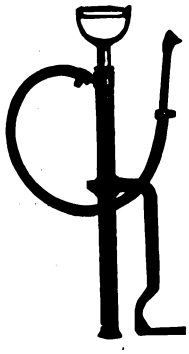


Are Self-Oiling; have covered working parts; extra large valves, and improved method of power application.

Will elevate water, force it against pressure, or pump it any reasonable distance.

Just as practical for pumping gasoline, kerosene, lubricating and other oils; also a successful boiler feed pump.

Operation any power. Different sizes meet depth and capacity requirements.



Circular and prices to the trade. Ask your jobber or write us.

Goods Made by [pig] are Made to Please

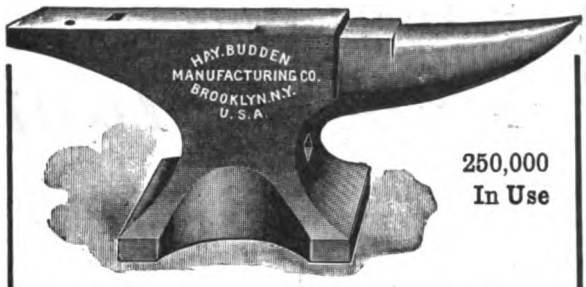
# Kees Metal Corners

are made to fit and protect all types of siding. They save hours of expensive labor and produce a better job. Heavy gauge galvanized iron assures durability. Chemically treated surface holds paint or stain as readily as wood. Pierced to take nails. Are practically invisible if painted with building—add class if painted as trim. No ornaments to catch dust or moisture. Accurately shaped to fit the siding and make a neat and absolutely water-proof job. Can't possibly spread or open. They please the builder and the owner.

Applied on Drop Siding

## For Drop and Lap Siding

You can sell these satisfying specialties to every builder and home owner no matter what type of siding they use.



*Write Dept. 50 today for prices and details*

# *A Good Rope—*
# *Seaport Manila*

Trade Mark

MOST so-called Hardware grades of Manila Rope omit the word "Manila," manufacturers well knowing that this particular grade is composed largely of colored Sisal fiber. The appellation of "Hardware Rope" has been misused and abused. It is unfair to a fraternity having a higher sense of quality in rope than any other class because larger distributors.

SEAPORT MANILA is 100% Abaca Fiber. A good rope, well made and quoted at as low a price as any Pure Manila Rope can be consistently offered. Has no equal in anything in a second grade on the market and a trial will be convincing. It is a departure in rope manufacture that will be appreciated by dealers and consumers where a less expensive Pure Manila Rope is wanted.

## Ironton Bunsen Burner Heaters

A few of the special features in Ironton Heaters: The Bunsen Burner—the air mixer—the circulation of cold air from the floor—the admixture and secondary combustion. These and many other distinctive features constitute the superiority of the **Ironton,** and will bring many new customers to your store.

Irontons produce more heat per foot of gas consumed than any other heater in the market. They burn the gas clean, odorless and free from soot and poisonous gases. No blackened walls or ceilings. A trial always convinces the customer of the superiority of Ironton Heaters, and helps you to sell others.

**Ironton Heaters** are made in 68 different styles and sizes—a size and style suited to every requirement, and to every pocket-book.

ALUMINUM

MADE IN OHIO, U. S. A.

# ALUMINUM "Real Solid"

## ANNOUNCEMENT

The "REAL SOLID" LINE has been for 20 years, the Strong, well known, dependable Aluminum line of Kitchen Utensils.

Our Policy is and has been to give the dealer goods of such quality that assures him not only his PROFIT, but the housewife's continued patronage. We have now added

### A New Line of

## "REAL SOLID WARE"

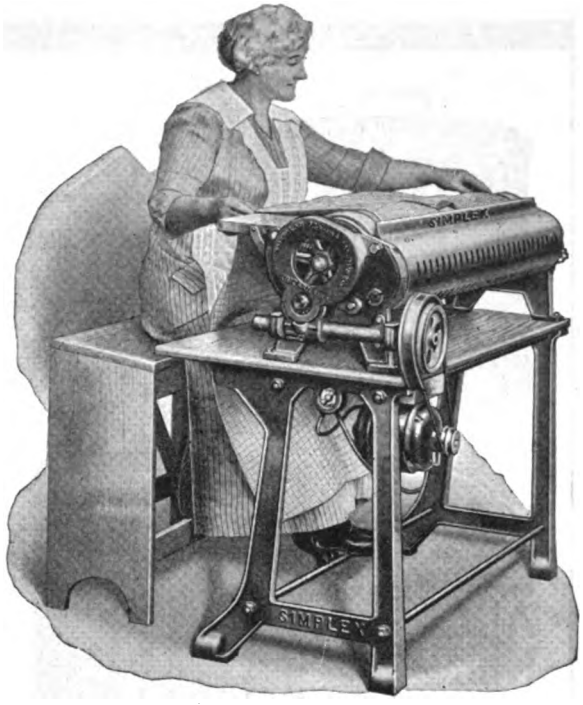
This is a Heavy Drawn line STAMPED from heavy tempered Sheets, which is far superior, in many ways, especially in Rigidness and Durability.

We have eliminated unnecessary expense of CAST ALUMINUM HANDLES, etc., and are Putting MORE METAL into the BODY of our UTENSILS.

TRIMMINGS — Tinned Iron, using Double Coated Tinned Iron—The best on the market.

PROTECTED HANDLES—All Coffee and Tea Pots with handles, both curved and straight—bottom of handle is protected with Metal Trimmings, so that it will be impossible for flames to creep up over bottom and burn off handle.

OUTSIDE FINISH—The Same HIGH CLASS polish as heretofore.



INSIDE FINISH—Scratch Finish Superior because it does not show finger prints from handling or dirt, which may accumulate while on dealers' Shelves.

**We have added 25 New Items, all practical. This makes the "REAL SOLID" Line the most complete on the market**

Write Today and get our New Catalog just off the Press.

## Assured Profits by Selling the

## SIMPLEX IRONER

"THE BEST IRONER"

Comfort and ease at what is otherwise very tiring work is a unique feature enjoyed by women who use the Simplex Ironer. This is possible because of the extreme simplicity of the Simplex, with its wonderful automatic feed control.

Women to whom you sell a Simplex can sit down and iron. That is a big selling point which is attracting many profitable sales to Simplex dealers everywhere.

The household appliance department selling the Simplex can do so with the satisfaction of offering customers the leader in the field.

We co-operate in training your sales force in specialty selling. The SIMPLEX Sales Plan for dealers is far-reaching. It provides new practical suggestions for the building up of your entire Household Labor-Saving Appliance Department.

# SAFETY INTERLOCKING STOVE AND FURNACE PIPES

Fire Preventing

Home Protecting

Ambrose P. McGuirk's Patent

Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are very necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the receding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe.
Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.
Send for Price List and Descriptive Statement.

# What's In a Name

Enough—plenty — SUCCESS in the RIGHT ONE properly applied. It's half the game, naturally, you don't get a good one with poor merchandise, unprincipled methods nor disregard for rendering distinctive and valuable service. Establish a meritorious name, it compares with a solidly laid rail system that has demonstrated "delivered" ability, preciseness and certainty, when the charges are fair the public uses the road over and over again, even if the cars are changed in color, the conductor's uniform from blue to gray or electricity replacing steam.

"Good Morning" (It's me they're talking about)

Evidence galore, Brunswick Balke (Pool Table Mfgrs.) undeniable success producing talking machines and automobile tires. Do you think the name helped any?

Heinz put over 57 and more varieties. We contend first one was hardest, name helped others along materially.

Chandler Motor Car Company identified with Cleveland Motor Car Company. Chandler a success, Cleveland unknown, BUT, public had sufficient confidence in connection that 25,000 Cleveland cars sold before one was shown.

Think of it. Standard Oil put over mild laxative (Nujol), really there is a contrast between Kerosene Stove (Perfection) and body lubricant.

"WHERE DO I COME IN?" asks the above member of the Gem Brush family. HERE AND NOW.

"On and above the fact that GEM BRUSHES possess one hundred cents of utility for every dollar expended, pay legitimate wholesome profits to everyone handling them and guaranteed throughout, comes the burning truth that the name G-E-M, connected with shaving things particularly, spells SUCCESS from every stand-point necessary and essential. GEM BRUSHES represent new car developed with all knowledge possessed up to 1920 and now placed on that solid Gem System, which is BUYING POWER, they will ride forth with confidence of our trade to reach all points which is ULTIMATE CONSUMER via stations called DEALERS, through the transfer points called JOBBERS. Ring the bell and go ahead, you have the goods.

We all went to the top with Gem Razors and Blades because they are chocked full of quality, usefulness and results, they survived and succeeded because GEM exceeded everything in its class, stepped into another one of its own, very true, that is going to continue, also prevail in GEM BRUSHES.

Their name is 50 per cent at least of their selling power. If we put lake water in bottle labeled Gem Hair Remover, large quantities would be sold, but, eventually get knocked off the market; nevertheless, we'd sell a lot of it. GEM BRUSHES not only will sell on account of name, but, be backed up in use with real quality and service.

GEM BRUSHES will be advertised in magazines and through other channels all year around.

Don't lose sight of the fact that GEM BRUSHES are in a class alone, GEM BRUSHES are manufactured to sell no cheaper than good brushes can be produced.

GEM BRUSHES is all knowledge of Brush Manufacturing experts thrown together, divided with essential factors and the results GEM BRUSHES.

(Signed) THE GEM SAFETY RAZOR CORPORATION.

THERE'S AN AUTO-WHEEL WAGON SOLD EVERY MINUTE OF EVERY DAY

## Are You Capitalizing on This Unique Sales Plan?

The first Auto-Wheel wagon you sell is only a starter. We have a sales plan which multiplies that sale for you. How? By inducing the boy buyer to organize an Auto-Wheel Coaster Club. Then, as new members join the club, they go to you to buy. There are hundreds of these Auto-Wheel Clubs now in operation. And the demand for the

Auto-Wheel Coaster and the Auto-Wheel Coadster

has grown until now an Auto-Wheel wagon is sold every minute of every working day. The sale of as many as two Auto-Wheel wagons a minute in 1920 is more than a possibility.

Do you want some of this business? If so, write for our plan of helping you sell Auto-Wheel Coasters.

# New Ladd's Discount Book No. 3

A new and enlarged edition of this standard work, comprising the most comprehensive collection of discounts ever printed, as well as many other valuable computations for commercial purposes, is now ready, after months of preparation by the compiler and editor, William J. Ladd.

Is one of the greatest time and labor-saving productions of the age. The net of any amount at any discount can be obtained in a second. The calculations have all been carefully checked. No proving is necessary. It is invaluable for pricing and checking invoices, figuring inventory, making prices, figuring profit, etc. Note the equivalent discounts. Are they worth anything to you?

It contains more than 300,000 Computations including New Discounts and Combinations which have come into use within the last few years. Nearly 600 pages, all double indexed.

# Only Mirro Has All These Features

BECAUSE fine cooking is a precise art which requires precise tools, this Mirro Aluminum Double Boiler is in frequent use in homes where tastes are *epicurean*.

In the quick making of a delicate sauce, it protects absolutely against that shade-too-much of heat which means the ruination of flavor or texture. Again is it an essential in the slow cooking of those foods which require the long application of moist heat to make them tender and appetizing.

Like all Mirro utensils, this Double Boiler combines beauty with utility and extraordinary durability. Its handsome design and rich finish make it a real inspiration to Madame, the cook.

It has also the famous Mirro features of convenience—features which you do not find in ordinary aluminum ware:

(1) Hollow steel handles that insure comfortable handling. (2) Handles come together so that complete double boiler can be easily lifted with one hand.

☆(3) Rivetless, no-burn, ebonized knob, an exclusive Mirro feature. (4) Tightly rolled beads free from dirt-catching crevices.

(5) Rounded edges make cleaning easy and thorough. (6) Rich Colonial design.

(7) Famous Mirro finish. ☆(8) Famous Mirro trade-mark—stamped into the bottom of every Mirro utensil, and your guarantee of excellence throughout.

Back of this guarantee is America's foremost manufacturer of aluminum ware, a maker for nearly thirty years of *quality products* only.

Write for *miniature* Mirro catalog.

# A Business Man for President

LAST month we expressed the hope that the democratic party, then in convention, would follow the example set by the republican party in nominating the same high type of business man for president as had been done by the republican party, and the country rejoices that this was done.

At last we are to have a business man for president, no matter which party is successful. The republican party selected the men best fitted to fill the office of president and vice-president, and those accustomed to vote the republican ticket have enthusiastically acclaimed them.

Harding and Coolidge typify a fine type of Americanism. They have been tried and found not wanting. What they stand for is well known both nationally and internationally. They exemplify a clean, moral American manhood in public and private life and comprise a ticket that will appeal to that element of American citizenship who believe in the enforcement of law and order and the preservation of American institutions.

The democrats have also nominated the best men in their party to give the country a business administration, and while there has not been the same degree of enthusiasm by all factions of the party, yet before the November election comes around Cox and Roosevelt will rally to their standard those whose adherence to the democratic party is a matter of custom.

Governor Cox has proven his ability in his own private business, and his popularity in his native state is attested by the fact that he has been thrice elected governor of Ohio. He also served one or two terms as a member of the House of Representatives. To the name of Roosevelt there is a prestige. Unknown except as Assistant Secretary of the Navy, yet the country would be willing to give him an opportunity to see if he can live up to the standard set by one concerning whose four-square Americanism there was no doubt.

It thus remains to be seen whether Harding and Coolidge or Cox and Roosevelt will appeal to the majority of independent voters, many of whom are accustomed to weigh and consider carefully what is for the best interests of the country—and to those more easily influenced by some campaign slogan or propaganda that may develop before November.

The nominations of both parties appeal to what may be called the conservative element. True there are radicals who term each candidate colorless or

Digitized by Google

reactionary, but if colorless means those whose affiliations with the Reds have been most marked, then the country is to be congratulated that neither of these men are even pink. We need an executive who believes firmly in American institutions.

Progressives or Radicals, or "forward looking people," as they sometimes style themselves, who are dissatisfied with this country and the opportunity that it offers are usually either men who are disgruntled, disappointed politicians, or those who advocate Sovietism and applaud anarchy and crimes or else they are those who unthinkingly, and yet often with the best intentions, are easily misled by self seeking demagogues who use language to conceal their thoughts and resort to underhanded methods to accomplish their purposes.

The country is to be congratulated that at least for the next four years it will be rid of these professional, self-seeking demagogues, politicians, theorists, doctrinaires, or whatever they may be. Whether Harding and Coolidge, or Cox and Roosevelt are elected it will at least have a business man at the head of the government.

It behooves everyone, no matter how he has voted in previous years to study the situation in which we find ourselves today, with as little partisanship as possible, and to vote as he believes for the best interests of the United States.

It is to be regretted that President Wilson thought it advisable not to approve the action of the majority of the Senate in ratifying the peace treaty, but to make it a campaign issue. There are members in each party who honestly differ on this question, in fact in the President's own party are to be found a large number of democratic Senators who take issue with him. But since the President thought it advisable to so make the issue there is nothing else left to do. Each businessman should keep open mind and learn all he can on the entire question.

Naturally our subscribers in Ohio are feeling mightily puffed up these days, with the certain knowledge that in any event an Ohioan is to make his home at the White House for the next four years.

---

Business, thou Plague and Pleasure of my life,
Thou charming Mistress, thou vexatious Wife;
Thou enemy, thou Friend to Joy, to Grief:
Thou bring'st me all, yet bring'st me no relief!
Thou bitter Sweet, thou pleasing, teasing Thing.
Thou Bee, that with thy Honey wear'st a Sting:
Some Respite, prithee, do, yet do not give . . .
I cannot with thee, nor without thee live.

—Poor Richard.

---

Boarding houses drive a lot of their victims to matrimony.

---

Sixty-nine muscles are required to create a frown, and it takes but 15 when you smile. Why work overtime?

---

A courteous salesman deals in futures—there is only one "today," but many "tomorrows" are headed his way.

---

If you are in business to stay, see that you get the good will of the children of today, for they will be the adults of tomorrow.

SHADES OF MAN!

—when a man has no pep, they say that he's colorless.
—when he's mad they say he sees Red.
—when he is a coward, they call him Yellow.
—when he's straight, they say he's White.
—when he's loyal, they say he's true Blue.

---

The wise woman rules her husband by permitting him to think he's "it."

---

When you can answer inquiries, "It is so," instead of "I think so." you will be one of the most valuable men in your organization.

---

The disparity between the fellows at the top and the fellows at the bottom is not nearly so much a matter of distance as determination.

---

A reader suggests that our money be made out of rubber to make it stretch farther and give better service on a rainy day. Why not? A number of manufacturers seem to be successful in making money out of rubber.

# What Five Years Have Done to Prices

THOSE of us who have become accustomed to adding a little now and a little then to the price of every article that we buy are glad of an opportunity to get a little way off and see just what the general raise in prices has been.

At the start, we should realize that the raise in the hardware prices has not nearly equaled those of food or clothing. The hardware manufacturer, characterized as he is by sound business sense and an unwillingness to take advantage of a temporary condition, has faced his battle courageously and kept prices within reason. The hardware trade has not charged what the traffic will bear, and cannot be classed among profiteers.

Such a tabulation as we are publishing this month shows the percentage of advance for each item in the hardware stock. This comparison of prices of hardware and kindred lines between January 1, 1915, and June 1, 1920, has been compiled by A. J. Bihler, of the James C. Lindsay Hardware Company, Inc., of Pittsburgh, Pennsylvania. It is issued by the National Hardware Association of the United States both for the information and guidance of the trade, and for the information of the country at large.

Indeed this list is a credit to the hardware trade and to the hardware manufacturer, showing the public how conservative and how far below the radical rises in other fields the advances in hardware prices have been.

All these prices are those ruling at the factory and not at the destination, so that where long freight shipment is necessary and new and advanced freight rates are in effect, the percentage of rise would be greater.

**COMPARISON OF PRICES ON HARDWARE**

**January 1st, 1915—June 1st, 1920**

## CARELESSNESS A GREAT LIABILITY

"I didn't begin with the asking,
I took the job and stuck.
I did the things they wouldn't;
And now they call it luck."
—Kipling.

One of the world's greatest writers once said: "Genius is nothing more than untiring efforts to achieve perfection."

The biggest liability of a great many Americans, which keeps them in the mediocre class, is the hasty, careless, thoughtless way they perform their daily labors.

We see all around us men and women who constantly slight details as unimportant. They either "haven't the time" to do a job properly or, when called to task for some careless, half finished work, calmly shrug their shoulders and say, "Oh, well, I thought that would do."

Ask the average filing girl to find a certain letter or paper. She looks where it should be. Probably it is not there. "Somebody's got the file. I guess it will turn up later," is her casual report. Maybe fifteen minutes or a week later she hands it to you. "Where did you find it?" you ask. "Oh, it was filed wrong and I found it accidentally," she replies. If you fire her the next girl may be worse.

This easy manner of taking things for granted, in order to avoid any real concerted effort to see a task accurately carried out to a proper finish, is damning 75 per cent of our young men and women to a life of routine work at low pay. Then they wonder why it is that Smith or Jones who takes a serious interest in his work, knows his job thoroughly and does not have a slovenly working mind and avoids going off "half cocked," finally gets the raise and becomes the boss.

It is not luck which brings a man or woman to the top of the ladder of success. It is only by hard, earnest work that this peak can be climbed. You cannot "stall through" and gain the heights by "passing the buck."

By persisting until you find the answer to the problem, by applying yourself earnestly and seriously to learn every detail thoroughly of the job in hand, by doing your work carefully, conscientiously and accurately, you will be picked by the boss as the right man to promote to the bigger task and big pay.

One of America's great employers says: "There are many $10,000 a year jobs going begging. We cannot find the men to fill them."

Train your mind to think carefully and clearly. Do not spare yourself in tracking every detail down to where it will give you the right answer on the problem on which you are working. Don't give up because you "can't be annoyed." Be thorough. Be diligent.

Then you are fitting yourself to step into that $10,000 or $100,000 job some day.

---

Yes, lots of modern autos are old-fashioned—for one thing, they wear hoods.

# Featuring A Model Electric Home

IN one western city the merchants handling electrical household goods recently combined and completely equipped a model home in one of the new residence tracts. The real estate agents co-operated in wide publicity, and thousands of persons saw electrical goods at work.

In this one home has been installed every labor-saving device produced by the electrical profession for the modernizing of the home. From the music in the living-room to the range in the kitchen the power of electricity predominated in every phase of the home's activity.

The broom with its arm aches and dust-raising propensities has been supplanted by the dustless electric vacuum cleaner.

The electrification of the kitchen has done more perhaps to emancipate the housewife from drudgery and add to her leisure than any other scientific development. Here the electric range with its clock devices and its thermostatic ovens has simplified the preparation of a meal and reduced this operation to a scientific basis.

The electric dishwashing machine, the electric water heater, the utility motor for the operation of sundry little kitchen labor-saving devices are other important features in this vital part of the home.

In the dining-room such electric equipment as the percolator, the toaster, the samovar, the chafing dish, the combination grill, and numerous other appliances, have made it possible for the wife and mother to carry on most of the meal's preparation within the family circle gathered about the table.

There is a SPARKle in the eye of the Electric Cook, and merchants who have tried it tell us that the electric range already set up and in action in a real kitchen is the very best salesman. Why not an Electric Home in your town?

All of the aches and annoyances which have immortalized the memory of Monday to generations of womankind have been eliminated in the electric laundry with its equipment of an electric washing machine, an electric ironing

Arrange such a public breakfast as this in your store or in a designated house in your town, and the sale of electric toasters, coffee pots, and waffle irons will respond tremendously. Read what the combined electrical equipment merchants in one city have done along this line by outfitting and opening to the public a model "Electric Home."

Digitized by Google

machine and an electric iron. Here the housekeeper occupies the position of a director rather than a laborer.

The electric fireplace and electric heaters have taken the place of the more burdensome heating apparatus, the operation of which formerly fell largely to the housewife.

In the sewing-room the old pedal machine has given way to the portable electric.

The electric curling iron and hair dryer are appliances especially designed for the comfort of the feminine members of the household.

## WHERE ELECTRIC GOODS WILL GO

**Living-Room**

Electrical piano, electrical victrola, wall and floor lamps, electrical fireplace.

**Dining-Room**

Electrical percolator, chafing dish, samovar, combination grill, waffleiron, toaster.

**Bedrooms**

Electric fireplace, electric curling-iron, hair dryer, electric vibrator, sewing machine, heating pads.

**Bathroom**

Electric shaving mug.

**Kitchen**

Electric range, electric refrigerator, electric dish-washing machine, electric water heater, utility motor.

**Laundry**

Electric washing machine, electric ironing machine, electric iron.

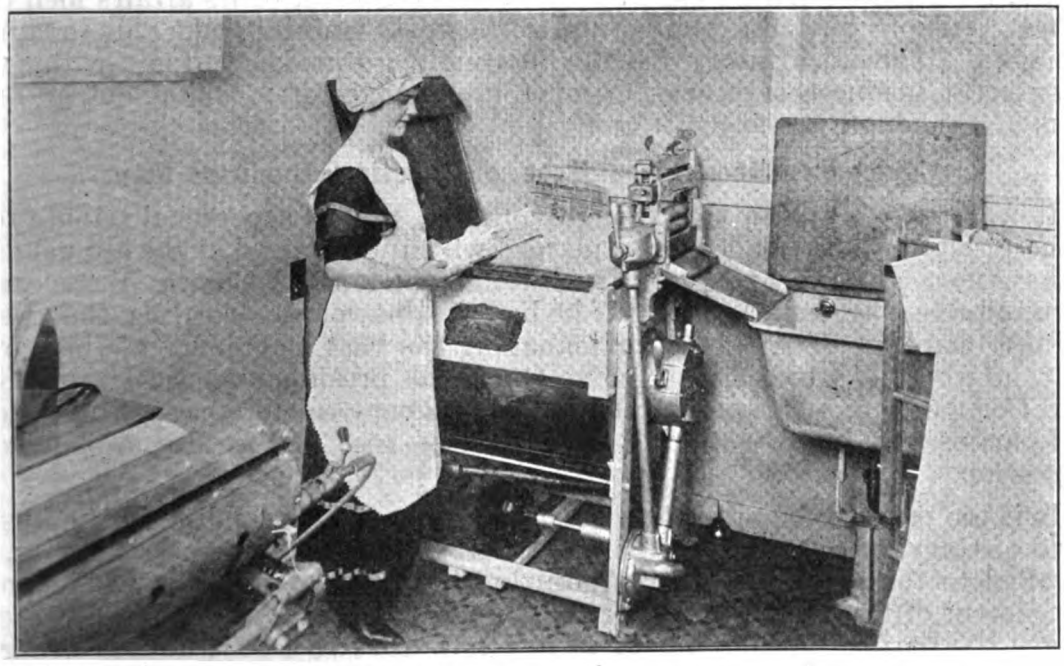
**General Household Equipment**

Electric vacuum cleaner.

## FIGURING THE COST OF OPERATING ELECTRICAL HOUSEHOLD DEVICES

It is a matter of interest to the user of any household electrical device to know how much it will cost him for electricity to operate it.

The cost of electric service depends both on the power used and the length of time it is used. The usual practice is to base the charge on the kilowatt-hour (abbreviated kw-hr), which is the energy supplied in one hour by one kilowatt (meaning 1000 watts). For lighting, the retail price of one kilowatt-hour varies from 6 to 15 cents. Household devices are customarily used on lighting circuits.



For instance, a family has a 600-watt toaster, which they use ¼ hour every day. They want to know what it will cost them per month (30 days) at 8c a kilowatt-hour. Multiplying the unmber of watts by the time, we get 600 watts x ¼ hour x 30 days, equals 4½ kilowatt-hours. At 8c a kilowatt-hour, the total cost will be 36 cents per month.

---

Don't give up—nails are not driven with a single stroke of the hammer. Patrons are not always ready to fall on your neck and kiss you, and say, "All my patronage is yours," when they first see your phiz!

---

A salesman without patience is as valuable as a juiceless orange. Even if a patron hasn't a bit of patience it is no excuse for losing yours—then there will be a brace of you.

**This is the business corner of the finished-by-nine-o'clock laundry in the Model Electric Home. The picture shows the washing machine with its direct plumbing and drain connections and the electric ironing machine.**

# Why Should Business Men Be Afraid

THE business men of the country, who include all the great forces alike in the Democratic and Republican parties, have too long taken a back seat and left to mouthing politicians the management of the vast machinery of this government.

Business men have almost been afraid to express their opinion on any subject for fear that they would be charged with trying to dominate the nation, and afraid to be represented in Washington for fear of being charged with lobbying, while all the radical labor elements of the country, in and out of government service, can maintain all the lobby agents they want and no one lifts a voice in protest, says the Manufacturers' Record.

It is accepted by the country at large that the Socialists and the Radicalists and the Communists and the Bolshevists and all the other "ists" of the land can fill Washington with their agents, fill the newspapers with their propaganda, and still go without a word of criticism. But the moment business men undertake to make their voices heard in Washington there goes up a mighty cry of lobbying.

### Difference Between "Lobbying" and "Educational Propaganda"

Everything done in Washington to express the views of the business interests of the country, upon which the existence of the nation rests, is lobbying in the sight of many politicians and many newspapers but everything which is done by the Socialists, the Communists, the Radicals, the Reds and the Revolutionists is holy propaganda work in the view of the same people.

Fortunately, however, there is growing up in this country a realization on the part of all thinking men that as America is one of the greatest organizations on earth, requiring great managerial ability in the wise direction of its affairs, so there should be called into the management of its affairs men of the highest possible business ability and of business training, men able to run governmental financial affairs with the thoroughness and accuracy with which every great business organization must be managed if it would not go on the rocks of bankruptcy.

### Everyone Recognizes Need of Electing Business Men

It was probably with this thought in mind, and as a personal tribute to one of the great business leaders of America, which was voiced at the annual dinner of the American Iron and Steel Institute recently, when Charles M. Schwab, in his inimitable way, indicated that if he had the power of selecting the greatest business manager of America for managing the vast machinery of this government, he would call to the task Judge Gary, the president of the United States Steel Corporation, and instantly 1400 at the dinner—men representing both political parties and every section of the country—rose and wildly applauded the suggestion.

Is it too much to hope for that some day men of the standing in the business world of Gary, or Schwab, or others of their phenomenal business activity, may be called to the great task of reorganizing the work of the management of the government of this country in order to cut out the vast waste that now goes on, to save the nations the billions of money now thrown away, and to bring into every department of governmental work the greatest constructive and managerial geniuses which the nation has ever produced?

## PAINT IS CHEAP BY COMPARISON

Shabby farm buildings, badly in need of paint, are the general rule in the United States today. "We can't afford to paint," protest the farmers. "Paint has doubled in price in the last five years."

Even so, the farmer can better afford to paint than neglect his buildings. Figuring today on a retail price of from $5.25 to $5.50 per gallon, as against a retail price of $2.75 per gallon in 1916, it will be easily shown that compared with all the staple commodities, paint is relatively cheap.

In July, 1916, a farmer living in Ohio, Illinois, Minnesota, or Pennsylvania, who wanted to buy ten gallons of high grade house paint from a dealer to paint his property, could make that purchase by selling to the grain elevator in his vicinity twenty-four bushels of wheat—wheat at that time being worth $1.14 per bushel. Today, any one of those same farmers can buy this same amount of high grade paint from the same dealer and pay him $5.25 a gallon for it, and do so by selling less than twenty-two bushels of wheat. Wheat today is $2.40 per bushel.

A southern farmer in Alabama, or Texas, or Arkansas, could buy ten gallons of high grade house paint in July, 1916, with 212 pounds of cotton—cotton at that time selling at 13 cents per pound. Today, he can buy the same amount of high grade house paint from his dealer with 122 pounds of cotton, which sells today at 43 cents per pound.

And all through the line of staple commodities the facts are the same. In 1916, it took 30½ bushels of corn to buy ten gallons of high grade house paint; today it can be bought with 28 bushels. In 1916, it took 60 bushels of oats to buy the same quantity of good house paint that 44 1-3 bushels will buy today, while of rye, 26 bushels in 1916 would buy only what 14½ bushels will buy today. As regards barley, it took 34½ bushels in 1916 to buy ten gallons of a reliable house paint, whereas today it can be bought with 30 bushels of barley.

These comparative figures and relative values will hold good on cattle, hogs and sheep, on iron ore, or pig iron, or structural steel, or on lumber—either of the southern pine type or the harder woods of the north.

The cost of the principal ingredients entering into the manufacture of a good grade of house paint today is entirely out of proportion to the cost in 1916.

At the date of writing, flax is worth $4.80 per bushel, and in 1916 it was worth $1.85. Linseed oil is selling in tank cars at more than $1.75 and in 1916, it was selling at 62 cents. The price of tin plate today is $19.50 per base box and in many cases is selling higher than this to get immediate deliveries; in 1916, the same tin plate sold for $6.00 per box.

So, measured by any standard of comparative value, even including that of labor, paint is the one cheap commodity available today.

## PAINT CUSTOMERS THAT STICK.

"Mom wants a pint can of green paint," is the message Willie delivers to the paint dealer. He gets it—no questions asked.

A week later Mom herself appears in front of the counter. Mom is mad. She indignantly shows the dealer a dress nicely decorated all down the back with green stripes.

"That paint you sent me was no good," she exclaimed, "I painted the porch chairs with it and look what it did to our clothes! You ought to make good the damage."

Here was a paint customer that stuck—to the chair, but not to the dealer. She went elsewhere for her paint supplies.

The dealer could have saved a customer by better service behind the counter. Willie should have been asked what the can of paint was to be used for and should have been given a can of enamel especially intended for furniture, porch chairs, etc. These goods are durable and hard drying; do not become soft or tacky nor stick to the clothing.

But how many paint store clerks go to any trouble to find out what customers want and sell them goods best suited to their needs? How many dealers instruct their clerks to render service of this kind?

Would it pay? It costs less to keep a customer by satisfying him, than to make a new one by advertising.

## CLEANING PAINT OFF WINDOWS

Cleaning the windows of a new house or a newly painted house is no enjoyable job. The paint comes off easily, however, if given a little of the right kind of help.

One would hardly go to an automobile accessory store or a garage to find something with which to clean windows, yet it will be found that an ordinary tar remover, used by motorists to clean up their machines after a trip over newly tarred roads, is one of the best things obtainable for taking ordinary house paint off glass. Once housewives learn this, dealers in tar removers are going to have lots of customers who do not own an automobile and never expect to own one.

Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built.

—Abraham Lincoln.

# A Lesson In Opportunity

(Copyright by Napoleon Hill)

A LITTLE old stoop-shouldered woman walked into one of Pittsburgh's department stores one rainy day and wandered up and down the aisles. She did not look like "ready money," therefore the clerks "didn't see" her, none except one of them.

This young man was not one of the "regular" clerks. He had only been with the store a few days, therefore he hadn't "wised" up yet. He stepped up to the old lady, helped her with her purchase, escorted her to the door and raised her umbrella for her.

As she left she asked for his card!

Later an order came to that store for furnishings for one of the finest mansions in the world. With the order came the request that this same young man be sent to oversee the installation of the furnishings. The manager of the store protested that the young man was inexperienced; that the store had more experienced men; but the customer insisted that this young man was the one she wanted to oversee the work.

The customer who placed that order and requested the services of that young man was Mrs. Andrew Carnegie; none other than the little old woman whom this young man had shown unusual courtesy while all the other clerks were "looking the other direction."

**Opportunity Knocked At That Young Man's Door and Found Him In!**

Opportunity never comes in silks and satins, nor seldom is it heralded with the blowing of horns or led by a brass band. It usually sneaks up to us when we are not expecting it.

Opportunity stands at our side from morning until night. Every time a little old lady comes along near us opportunity comes with her—opportunity to at least be courteous and receive happiness for our efforts. Every time there is work to be done which no one else wants to do, opportunity beckons us to step up and embrace her, because it is here that the first step toward leadership is taken.

The poet who wrote in his verse that opportunity knocks but once, did the world a tremendous damage!

Every time a person does you an injustice you are face to face with opportunity—a glorious opportunity to prove to yourself and to the world how big you are by applying the Golden Rule, forgiving and forgetting.

**Always Facing Opportunity**

Every time you have a chance to get the better of your fellowman in a business deal you are face to face with opportunity—opportunity to increase your own self-respect and gain the confidence of your fellowmen by doing the unusual thing by not taking advantage of that chance.

It makes no difference what may be your calling in life, or how lowly the work you are doing at present, you have a glorious opportunity to raise yourself into more important and more profitable work by the simple process of performing more service and better service than you are actually paid to perform.

You know where your neighbor keeps his family skeleton. You could drag it out and humiliate him. What a wonderful opportunity stands at your side every moment and bids you be big enough and great enough to let that skeleton remain undisturbed.

Your competitor "knocks" you and tries to take away business that you are entitled to. What a splendid opportunity you have to remain silent and permit him to defeat himself with his own weapon.

The world may say mean things about you. What a wonderful opportunity you have to prove the world a liar by your good conduct, your kindness toward your neighbors, your fair dealings in business, your splendid example of forgiving and forgetting.

Opportunity is always and everywhere beckoning to you to embrace her. When you are alone she stands by your side and bids you impress upon your own heart and mind, through the principle of auto-suggestion, that you are an honorable, sympathetic, just, kind, progressive citizen, and, that you are enjoying happiness by helping your fellowmen find it.

What greater opportunity than this could one want?

---

## SPIRIT OF COMPETITION EVEN BY STENOGRAPHERS

Two St. Louis stenographers, working for competing hardware establishments, were boasting of the speed of their shorthand writing. "Whenever I am working on a warm day, all the people try to get near to my table." "Why?" asked the other. "Because," said the pen-pusher, "my hand goes so fast that it creates a current of air like a fan." "A mere nothing," said the other. "I always have to report on wet paper, or else the current of air caused by the movement of my hand would blow it away. Besides, the paper has to be wetted every few minutes, because the friction caused by the rapid movements of my arms would set fire to it in no time."

## USE THE TELEPHONE AS AN ADJUNCT TO THE "WANT-BOOK"

Most merchants keep a "want'book" in which is entered a list of merchandise called for and "out of stock" at the time or not carried at all. As generally used, the inquiry which prompted the entry in the want-book is never converted into a sale, no record being kept of the name of the customer who asked for the goods, or any effort made to notify him or her when the goods come in.

A New England merchant finds that many sales can be be made by using the telephone in connection with his want-book. When a customer calls for an article that appears to be out of stock, not only is an entry made in the want-book to remind the buyer to replenish that particular number, but the name and telephone number of the customer is secured and as soon as the new goods come in the customer is notified.

Very often, of course, by the time the goods are received it is too late to make the sale, but the telephone message is by no means wasted effort. In the first place, it shows the customer that particular interest has been taken in his or her wants. Then, too, it is more than likely that even if the customer no longer needs the particular article originally inquired for, he may be interested in something else that the salesclerk may mention over the phone.

This merchant believes in a liberal use of the telephone as an adjunct to his sales plans. He has a special "telephone salesman"—a young fellow with a pleasant voice and insinuating manner whose popularity behind the counter serves him in good stead over the wire.

When a new line of merchandise comes in, this salesman is instructed to call up a selected list of customers and tell them about it. The personal element involved in a special telephone message helps to put across many a sale, and the cost of the telephone call is considered a small investment compared with the advertising value it represents.

"The voice with a smile" can be used to great advantage by almost any storekeeper—over the counter as well as over the wire.

---

Did you ever notice that sometimes failure develops a man quicker than success would?

---

Men are valuable just in proportion as they are able and willing to work in harmony with other men.

---

Cut-rate tactics sometimes result in sellin' lots of goods and makin' a big showin'—but the profit is usually on the wrong side of the ledger at the end of the year. Some fellers think they're in the swim when really they're in deep water.

## OPPORTUNITY

(A poet once wrote some very striking verses in which he asserted that Opportunity knocks at every one's door but once. As this poem became quite celebrated another poet arose and wrote some equally striking and much more inspiring lines on the opposite theme. The latter writer was Walter Malone and his verses, which deserve wide recognition, are given below.)

They do me wrong who say I come no more
When once I knock and fail to find you in;
For every day I stand outside your door,
And bid you wake, and rise to fight and win.

Wail not for precious chances passed away,
Weep not for golden ages on the wane;
Each night I burn the records of the day—
At sunrise every soul is born again.

Laugh like a boy at splendors that have sped,
To vanished joys be blind and deaf and dumb;
My judgments seal the dead past with its dead,
But never bind a moment yet to come.

Though deep in mire, wring not your hands and weep;
I lend my arm to all who say, "I can."
No shame-faced outcast ever sank so deep,
But yet might rise and be a man again.

Dost thou behold thy lost youth all aghast?
Dost reel from righteous Retribution's blow?
Then turn from the blotted archives of the past,
And find the future's pages white as snow.

Art thou a mourner? Rouse thee from thy spell;
Art thou a sinner? Sins may be forgiven;
Each morning gives thee wings to flee from hell,
Each night a star to guide thy feet to heaven.

---

## WHICH WAS THE WORST?

A Kansas HARDWARE WORLD reader tells us that one of their local editors was asked to leave the community as a result of a typographical error in his report of the wedding of the mayor's daughter.

After exhausting his supply of large words about the "blushing bride," he said: "The large elaborate bouquets of roses were punk."

The mayor demanded a correction and apology in the next week's issue, all of which the the editor was glad to promise.

The next issue contained: "We wish to apologize for the manner in which we disgraced the beautiful wedding last week. Through an error of the typesetter we were made to say, 'The roses were punk.' What we wanted to say was that 'the noses were pink.'"

## WHAT CONSIDERATION DOES THE GOVERNMENT SHOW FOR THE AVERAGE MAN?

(By C. V. Young)

Mr. Speaker, honored legislators and all the lobbyists within the reach of my voice, I rise to interrogate: Just where does labor leave off and capital begin? Who looks after the rights of the disorganized you-an'-me proletariats in between. I belong to the majority party of the Men-Who-Pay-the-Bills, and I am getting sore on languid labor and corpulent capital. I don't wear overalls and haven't a silk hat! I can't afford to own a yacht, and I can't afford to go on a strike, although I have worked hard for twenty years.

I have a family and I am more or less respectable. I pay my bills on the first of the month, likewise I pay town, state and national taxes. I have never been confined in a jail or in any institution supported by public funds.

I am American born, with all the rights of citizenship, including protection—especially protection at home. I want to know what the government of the U. S. A., apart from political "necessities," offers as a permanent and orderly cure for these periodic eruptions of strikes. If capital is to blame, what's the remedy? If labor is to blame, what's the remedy?

Or is the whole system rotten? Does the one squeeze the other when the opportunity comes, just because he can? I'm only the Man-Who-Pays-the-Bills. Yet I know my group of men is larger than the other two groups combined. I also know I'm the season-after-season-goat and I want to ask, "Does this government know I'm the goat and what are you going to do about it?"

A bunch of boomers get a hold on the natural water resources and overcapitalize; I pay twice for water. That's capital. When the weather turns cold, some coal miners in Pennsylvania or Colorado decide to strike—I don't know what for—and there isn't any coal and my baby gets the croup and nearly dies. That's labor.

I'm not jealous of what they get, but I think I ought to get something besides the honor of paying the bills and suffering the inconveniences.

I want to know when this government, conceived in liberty, will give me a chance to plan my life just a little bit on a permanent basis. I can't strike for a raise in pay—I have to deserve it. I haven't accumulated capital enough to live on without work, and I want to know sure what the price of eggs will be tomorrow morning.

You know who I am. I'm the Average Man. I earn more than $1,300 a year, but not much more. I spend my salary for sane and sensible living. I have ambitions for my boy and girl, maybe a college education, and about every thirty days these two highwaymen, capital and labor, come along and hold me up! Whichever one wins, I lose, and I want a basis.

I say economic theories are all hunky-dory, but a little common sense added ain't so bad at that! I say sympathy is all right until we develop professional sympathy grabbers. I say that the unions are all right until they become offensive instead of defensive.

I send my wife and kids on a vacation. Before the vacation is half over I have to wire them to rush back because there is going to be a railroad strike. Their good time is spoiled because they might be injured on the way back, maybe with a brick or a derailment. I have to spend $100 to go to meet them. One hundred dollars—the price of a winter suit and a pair of socks. Why? Because this country knows how to organize a strike, but not how to disorganize one.

And that's my kick, gentlemen. I want to know what you are going to do for us fellows who own the cottages and the Fords and who don't belong to the unions and don't wear overalls and don't own any banks. We buy what labor makes with capital's profit tacked on, an' I want to know where we get a square deal.

---

## ARMENIA'S WOODEN "CUTLERY"

Hardware and cutlery made by the Armenian refugees now living on the edge of the desert, outside of Port Said, will doubtless be among the souvenirs brought home from the Near East by returning tourists of the future, for the shortage of raw materials of all kinds has led to the use of a comparatively little used material in the manufacture of these articles, according to the American Cutlery Bureau of Information. The artisans take the latest American knives and forks as their models.

Lemon wood is being supplied to the refugees, who are being cared for by the British military authorities, to be carved by them into combs, knives, forks and spoons. The wood, being soft enough to carve easily, lends itself admirably to the new use, and some of the combs designed by the Armenians as hair ornaments are richly carved.

Most of the industrial work is done under the direction of the American Red Cross, which has established in the refugee camp schools for the lace makers as well as for the lemon-wood carvers of cutlery. Often the children show remarkable proficiency in both of these occupations, which have been practiced by their people for generations. An odd feature which always impresses the tourist is the flat backs and heads of all the children. This is not a congenital deformity, but is due to the national custom of strapping the babies to boards "so that their backs will be straight."

## HAS THE SUPPLY-DEMAND LAW STOPPED WORKING?

In orthodox economics prices are supposed to be governed largely by supply and demand. If more of an article is thrown on the market than is wanted by purchasers, the price falls; if the market offers less than is wanted, it rises. In the first case producers compete for the few buyers; in the second, buyers compete for the reduced product. This presupposes, says a writer in The Scientific American, a certain degree of flexibility in both supply and demand by which an adjustment finally takes place. Now, just at present, he asserts, this flexibility is entirely wanting.

There are, he says, "a rigid supply and an inflexible demand." There are just as many customers for a high-priced article as there were when the price was low, and each wants the same quality. The price keeps going up until those who can least afford it are frozen out altogether. Is this a failure of the supply-demand law to function, or an instance of its working only too well? The writer protests that the former is the case. He says:

"We should probably argue that when the supply is greater than the visible demand, an artificial demand must be created by making the price so attractive that, whether for investment or for future needs, people will buy who would not ordinarily do so. On the other hand, if the demand is greater than the supply, the only way in which ten thousand articles can be made to go around among twenty thousand potential consumers is by elevating the price to such a point that half these people can not or will not meet it.

### Is the Demand Flexible?

"Now this is very pretty indeed, this scheme which nature has worked out and bestowed upon man for creating a demand sufficient to absorb any excess supply, and equally for curtailing the demand in the interests of a restricted supply. But it will be noticed that in both cases the adjustment is made by manipulating the demand. The supply, apparently, is to be assumed fixt and immutable—at least until another producing season rolls around with its appeal to the producer to make more or less goods. When there is too great a supply, demand must be stretched; when there is too great a demand, again demand is to suffer the procrustean process and be cut down.

"In earlier and simpler days we have no doubt that this worked out very nicely. But today when we go through the motions of cutting down the effective demand, the effective demand simply refuses to be cut. We have a condition which appears entirely novel, in that the consumer refuses to adjust his wants to the visible supply. If shoes are so scarce that the price doubles, according to all the rules of the game the demand and the sales ought to be cut approximately in half. Are they? Emphatically they are not.

### Buyers Violate Demand Law

"The consumer of today is a light-hearted, merry soul. If he could buy his shoes for five dollars, he would presumably do so—save for the relatively few foolish folk who think that dollars and quality are synonymous. If he must pay ten for them, he kicks mildly—and pays the ten. If the price jumps to twenty—well, his protests may be more audible, more indignant, he may insist with greater vehemence than before that the whole system is rotten and that something ought to be done about it—but he pays the twenty.

"We are apparently the victims of an unexampled and unexpected prosperity. Everybody has more money than he ever had before, and has so firmly acquired the mental habit of having money that the possibility never occurs of its future scarcity or of the desirability in spending it of asking for a fair equivalent. We see what we want and take it away with us—we may protest that the price has gone up inordinately, but we pay just the same.

"In the other direction, when it comes to adjusting the demand so as to take care of overproduction of certain lines, we are just as inflexible. Of several grades of the same article, everybody insists on having the best and nobody will take the medium and poorer qualities, of which there is therefore a glut.

### Demand Must Be Adjusted

"We talk about the law of supply and demand. Then we go right out to the butcher and the grocer and the drygoods store and arbitrarily refuse to give the poor old law a chance to function. If supply can't be immediately adjusted and demand won't be, what can be expected save prices that really will operate to freeze out entirely those whose resources are least?

"Not until we begin to adjust our demand very generally and on a very earnest scale may we expect to see any material reduction in prices. If we will, as a nation, use old equipment of every sort until we have squeezed out the last drop of utility, and of the things that have to be bought, buy the very poorest grade that will approximate satisfaction, we may hope for price adjustments. But between a rigid supply and an inflexible demand, what adjustment can there be? When an irresistible force meets an immovable obstacle, pity the poor fellow caught between—and then stop to ask whether after all if it is not this fellow's obstinacy that makes the obstacle an immovable one."

---

O little Ben Zene, come blow your horn!
You plow my meadow and hoe my corn,
Till the hired men that I used to keep
Look over the fence at my tractor and weep.

## WHAT THE WORDS "IN FULL TO DATE" ON A CHECK AMOUNT TO

I have from F. M. Timden, Dubois, Pa., a letter asking a question which many another business man is also asking:

I use a special check in paying all invoices, salaries, etc. In addition to my printed name and business across the left end of each check, I also have a space in which to indicate what the check has been issued for. In this space is the word "For," followed by a line, thus: "For....." Now if in this space I fill in the world "Account in full to date," which would then read: "For account in full to date," and the same is mailed to a creditor and accepted by indorsement and deposited, in due time returning to me through the bank, will this not legally close the account and thus constitute a full settlement as intended on my part?

Or putting it another way, of what value if any is a notation on a check indicating the payment of invoices due by inserting on the check date of same, or the words referred to, namely: "For account in full to date"?

Not only this correspondent, but thousands of other business men of all shades and degrees, religiously print on the back of their checks, "In full to date," or, "In full of all claims to date," thinking that this saves them from any possible controversy over the account. But it doesn't. Unless there has been some dispute over the account, such words on a check have no effect at all. If more is actually owed than the amount represented by the check, the creditor can sue for it and get it, even though he knows when he accepted the check that it purported to be a receipt in full.

Let us consider first cases in which there has been no dispute over what is due. The account between the parties is clear and straightforward. The debtor either accidentally or by design sends a check to the creditor for a smaller sum than that actually due, and marks it "In full of all claims to date." The creditor accepts it, banks it and gets the money. Later he discovers that the check doesn't cover the account. He can get the balance in spite of the notation on the check.

Or take another common case—where the creditor inadvertently sends the debtor a bill for less than is due. The debtor sees this and thinking to play sharp, sends a check for the incorrect amount and marks it "In full to date." Here, too, the creditor can get the balance, and the notation on the check is not a bar.

This is under an old common law rule which existed everywhere until certain States modified it. The rule can be stated thus:

Where the debt or demand is liquidated or certain (that is, where the sum due is settled and fixed.—E. J. B.), and is due, payment of the debtor and receipt by the creditor of a less sum is not a satisfaction thereof, although the creditor agrees to accept it as such, if there be no release under seal or no new consideration given. Payment of a less amount than is due operates only as a discharge of the amount paid, leaving the balance still due, and the creditor may sue therefor, notwithstanding the agreement.

The reason for this rule is that the agreement is without consideration or void, as the debtor is under an obligation to pay the whole debt at the time, and the creditor is entitled to receive the whole.

Under this it was formerly the law everywhere that the creditor could get the balance of an undisputed debt, even where he had actually agreed with the debtor in writing (though not under seal) to accept part of it in full. He could override that agreement as if it had never existed, because it had no consideration.

This rule has been modified in Alabama, California, Georgia, Maine, North Carolina, Tennessee, Virginia, Connecticut and Mississippi. In those States a debtor and a creditor can settle an undisputed debt for part of it, and they do not even need to do it in writing. But the law of all those States insists that both parties know what they are doing and intend to do precisely what they are about to. In none of these States would a simple notation on a check bind a creditor not to go after the balance of an undisputed debt, the agreement between them would have to go much further than that.

It is therefore the law everywhere, with the possible exception of North Carolina, that a creditor who accepts a check bearing the aforesaid notation, if the debt is undisputed, is not bound by it, but can get the balance.

There are two exceptions to this which should be cited. First is where there is some consideration for the agreement to take less than the whole in full. For instance, A owes B $1,000, payable December 1st. Being in need of money, B goes to A on September 1st and says, "If you'll pay me now I'll throw off $100." A agrees and pays him $900. That settlement is good, because it had a consideration, viz: paying the debt before it was due.

The other exception is where an agreement to accept less than the whole in full is under seal. A owes B $1,000. There is no dispute about the amount. A offers $900 in full settlement and B, being somewhat in doubt as to A's finances, or needing the money himself, accepts it. They then execute an agreement, and at the end of each signature put the scrawl which represents "Seal." That settlement will also be good, because it was under seal, and the seal, which is an insignia used for the purpose of solemnly binding the contract, gives it a legal consideration.

Everything said so far refers to cases where there has been no dispute between the parties as to the amount of the debt. Where there has been dispute, and the debtor sends a check for a smaller amount than the creditor has contended was due, with a notation on like that under discussion, the creditor, if he accepts it, is done. The law says then that the parties have made in effect a compromise agreement which must stand. Here is the law on those cases:

Where a claim is unliquidated or in dispute, payment and acceptance of a less sum than claimed in satisfaction operates as accord and satisfaction.

## DIFFERENCE BETWEEN A SALESMAN AND A WRAPPER BOY

A man presents himself in front of the counter in a paint store.

"Gimme thirteen gallons of light yellow paint and four gallons of white paint."

"Righto," says the wrapper boy as he hands out the goods and names the price.

But a salesman—what does he do?

"I judge from the colors, you're going to paint the house," he observes. "Good idea; can't afford to have any wood or metal work on buildings going to decay nowadays; costs too much to replace them, eh? But haven't you some gutters on that house that would be saved from rust by a coat of special rust inhibitive paint?"

"By gosh," replies the customer, "I forgot that. Glad you mentioned it. Gimme enough of that for about sixty feet of eaves troughs."

"Any fence around your house," inquires the salesman. The wrapper boy doesn't know there is any such thing as a fence.

"Yes—why?"

"Well, you know," volunteers the salesman, "that house isn't going to look as well as it should with a shabby old fence around it. You wouldn't put a nice new picture in an old battered, dingy frame, would you? Besides, fences and gate posts decay too, if not protected by paint."

"Guess that's right, too," agrees the customer. "I have about two hundred feet of fence. What color d'yu think would look good with that yellow house with white trim, and how much will it take?"

The salesman figures it up, suggests the color and sells the goods. The wrapper boy would have saved himself all this trouble and had time for another cigarette out in front.

"Got enough now for your outbuildings?" asks the salesman, "or haven't you any?"

"Um, yes, I have a detached summer kitchen and woodshed," says the customer, "but I wasn't calculating on spending any money on that."

"Looks pretty good as she is, eh?" remarks the salesman.

"No, don't look any too good, but er—say, I guess what you said about that shabby fence and the old picture frame goes for that shack, too. It's one story, tin roof, about 12x16. Might as well do this job right. Gimme enough more yellow and white paint for the walls and some red for the roof."

The salesman adds the cans to the pile. He has sold the man thirty per cent more goods than he expected to buy. A wrapper boy would have spent the time joshing the bookkeeper girl so that she couldn't work either.

There's many a wrapper boy posing as a salesman and drawing a salesman's pay in half the paint stores of the country. They are an expensive luxury for the boss to maintain.

## THE "MATTER WITH AMERICA"

What's the matter with America these days?

Too many diamonds, not enough alarm clocks.

Too many silk shirts, not enough blue flannel ones.

Too many pointed-toed shoes and not enough square-toed ones.

Too many serge suits and not enough overalls.

Too much decollete and not enough aprons.

Too many satin upholstered limousines and not enough cows.

Too many consumers and not enough producers.

Too much oil stock and not enough savings accounts.

Too much envy of the results of hard work and too little desire to emulate it.

Too many desiring short cuts to wealth and too few willing to pay the price.

Too much of the spirit of "get while the getting is good" and not enough of the old-fashioned Golden Rule.

Too much discontent that vents itself in mere complaining and too little real effort to remedy conditions.

Too much class consciousness and too little common democracy and love of humanity.

---

## AN OPEN SHOP

**The labor unions of Chicago have purchased a cemetery, where only members of the union may be buried.—News Item.**

All his life in a union shop
He'd daily earned his bread:
They buried him in a union grave
When the union man was dead.

He had a union doctor,
And he had a union nurse;
He had a union coffin
And he had a union hearse.

They put him in a union grave
When he was good and dead;
They put a union monument
Just above his head.

And then he went to heaven,
But to stay he didn't care;
He kicked because he said that some
Nonunion men were there.

He went down to the other place,
And there produced his card,
Then Satan drew an earnest face
And studied good and hard.

And then he laughed, his hands did rub,
Till he thought he'd never stop,
"Lord bless my soul," said Beezlebub,
"Why, this is an open shop."

## N. A. PETRY CUTS IN ON CUT-OUTS

The progressive hardware man can certainly feel a close kinship with N. A. Petry, for the story of N. A. Petry's evolution from the hardware into the accessory field is only one superlative example of the development that every active and far seeing merchant has experienced. Of course, we have in mind the Western merchant, particularly, whereas N. A. Petry is an Eastern manufacturer, yet three thousand miles is not nearly enough to make much difference in this matter of seizing opportunities, seeing into the future and moving along with the development of the industry and conditions. N. A. Petry is President and Manager of the N. A. Petry Company, Inc., at Philadelphia, Pennsylvania, manufacturers of automobile specialties, particularly the Petry Cut-out.

N. A. PETRY

The Petry line is best known to the Western trade through their distinguished Western representatives, the Norman Cowan Company. One of the joint achievements of Norman Cowan and the Petry factory this year was in making a carload shipment of cut-outs to fill western orders. Both Mr. Cowan and Mr. Petry believe in doing things in a big way, and both have done them, and are doing them.

As we suggested before, N. A. Petry is an old hardware man. He is also a dyed-in-the-wool Philadelphian, one of the wide awake ones. Surely the two go together, for Philadelphia can certainly lay claim to being a great hardware manufacturing center.

It was with Yale & Towne that Mr. Petry was initiated into the hardware business. There he started as a lock maker and worked up through the factory and the organization until he was assistant sales manager in Philadelphia. Yet he left to be in some phase of the business that would allow his ability full expression, working along the way of independence. Thus for the last twenty years Mr. Petry can point out with very just pride that he has "been in business for himself."

While manufacturing hardware, he was early impressed with the importance and possibilities of the growing automobile industry, and as early as 1904 he entered the automobile accessory field along with the other pioneers. He was prominent in both manufacturing and selling. For some years he had valuable experience in distributing the products of accessory manufacturers.

When N. A. Petry & Company was founded in 1911 it was as manufacturers' agents and as a sales organization. In 1916, four years ago, the Petry Company started manufacturing the present Petry Cut-out. The device was patented in February, 1917, and for the year 1917 the volume doubled. It doubled again in 1918 and in 1919 the business was trebled. It is expected that for 1920 the volume will again be trebled.

Even in view of this phenomenal increase in business, the N. A. Petry Company has never caught up with its orders since it started. The present demand is the greatest in the history of the business. The growth in popularity of the Petry Cut-out in the West has not been different. Three years ago the cut-out was hardly known. At the present time practically every jobber in the trade handles the product. The carload shipment tells the story.

Mr. Petry is a hard worker and a careful manager. He attends closely to his business and he knows every phase of it. His pleasant personality in meeting the trade and his vigorous, alert attitude make friends and business for him very naturally wherever he turns.

Other officers of the Company include C. T. Smith, vice president, and Mr. Petry's brother, F. J. Petry, the treasurer, who is a banker and broker in Philadelphia. Theo. Hoffer is superintendent of the plant.

### New Petry Ventilator

Aside from the cut-out, Petry products include the Petry universal pedal for the muffler cut-out, accelerator, exhaust whistle, horn, heater valve, etc., and the Petry ventilator. The ventilator is a new item in the Company's line and has the double advantage of fitting every car and entirely ventilating the driver's compartment.

The ventilator fits right on the cowl, the base of the ventilator is bolted into the cowl to a sub-plate underneath. Thus, whatever the shape of the cowl the ventilator can be adapted to it and makes a finished, close-fitting, water-proof and dust-proof job. It has been proved under road conditions that the ventilator will change the temperature ten degrees in the driver's seat. The price of the ventilator, including installation tools, is only $5.00 to the consumer.

In distributing Petry products, the West has been divided into three parts. The Norman Cowan Company handles the Far West. For the Rocky Mountain territory J. W. Van Degrift, 627 Charles Building, Denver, Colorado, is sales representative. In Chicago the line is handled by the Gray-Heath Company at 1440 Michigan Avenue.

## ENORMOUS SHIPMENT OF RAZORS TO SHEFFIELD

According to the American Consul in Sheffield, foreign safety razors are enjoying great popularity in Sheffield. Sheffield turns out thousands of safety razors every day. Nevertheless, its citizens still find it worth while to add a few foreign made ones to their collection. The American safety razor leads the list with sales of 200,000 dozen during the month of January during this year. Canada is second with a contribution of 60,000 dozen during the same month. The heavy preponderance of American safety razors is representative of the position of the American article practically all over the world.

While in the past the majority of American cutlery exports consisted of safety razors, there has been noticeable in more recent times an increasing demand also for American table cutlery, pocket knives and general cutlery, until last year only 40 per cent approximately of the American cutlery exports consisted of safety razors, while the rest was made up by general utility cutlery.

# Fads and Fancies

(By W. L. Clark)

IT makes little difference these days which way one turns, for he is confronted on every hand with some individual with a remedy for the business and social disturbances, some panacea for all the ills of today. On the one hand we find the so-called "financial expert" who decries an inflated currency and insists that money is cheap simply because it is plentiful and the remedy therefor is to contract the currency. Meanwhile others insist that it is increased production we need.

Labor, to the contrary, is loud in its demands for shorter hours and increased wages. So extreme have conditions become that they take the form of a "fad." Such was the "overall fad"—in devotion to which many individuals went into the market and purchased overalls in competition with the people who regularly wear them, and have simply succeeded in making themselves conspicuous. They have not lowered the price of clothing or assisted in a solution of any of our extravagant ways of living.

Again we find many well meaning people asking for the repeal of immigration laws. They are insisting that for some years to come we prevent aliens of all classes—whether desirable or undesirable—from entering this country.

### Begin With Yourself

In all this confusion and the discordant voices of these self-appointed prophets, is there not some sane, practical, common-sense thing upon which we can all lay hold and practice in our daily tasks? Somehow or other we cannot but feel that everyone is attempting to begin at the top, or to settle for the nation, problems which would be more readily solved if each individual applied himself to his own business and his own tasks.

What surer method of increasing production than for each one of us to see to it that his own work is done more expeditiously and at the same time more thoroughly. What more certain plan of stabilizing values than the purchase, even in a limited way, of substantial securities, liberty bonds, or thrift-stamps—not from any patriotic sense but from the purely personal, selfish standpoint of saving and accumulating property, and in addition, the refusal to purchase luxuries and unnecessary articles of personal use or adornment at tremendously inflated prices.

### Quit Envying the Other Fellow

What better method can be found of quieting unrest and preventing, or at least reducing, labor turnover than for each one to cease envying the other fellow. Why attempt to escape the particular vocation in which one now may be engaged? It is better to set about making it a permanent, profitable employment—whether it be office, shop, factory or farm.

Particularly is it important in this year, which will, before its close see a new President and Congress elected, that we distinguish between truth and propaganda, between statesmanship and anarchy, between education and agitation, between energy and unrest.

Neither you nor I can settle these things for the whole country, for our neighbors, or for anyone but ourselves. We can, however, as individuals lay hold upon those fundamental principles of life and by our daily work and conduct do our share in correcting the situation.

It cannot be done by agitation, publicity, politics, or pessimism but will be accomplished by common sense, industry, and frugality.

---

## PASSING OF FOUNDER OF BILLINGS & SPENCER

Mr. Charles Ethan Billings, founder of the Billings & Spencer Co. of Hartford, Conn., was born December 5, 1835, in Windsor, Vt. In 1852, when 17 years of age, he was apprenticed for three years to the Robbins & Lawrence Co., machinists and gun makers at Windsor.

In 1856 he entered the employ of the Colt's Patent Fire Arms Mfg. Co. of Hartford, Conn., as a tool maker and die sinker. In 1862 he received a contract from E. Remington & Sons, Utica, N. Y., to manufacture by the drop forging process certain pistol parts, which up to that time had been made by old fashioned, hand methods.

Completing the contract, he returned to Hartford in 1865 and accepted the position of superintendent for the Weed Sewing Machine Co. In 1869 he became associated with Christopher M. Spencer, they subsequently organizing the concern which is now the Billings & Spencer Co.

He was president of the company from its organization until five years ago, when he retired from the active management. His death occurred Saturday, June 5, 1920, in his 85th year.

For many years Mr. Billings gave personal supervision to the manufacture of the products of the company, and to this fact may be attributed the present high quality of the several lines of manufacture. He invented many of the articles which are now being manufactured.

# High Cost of Loafing On the Job

WE are confronted by a condition, not a theory. Prices are high, and show tendency to go higher. Wages are high, with an upward trend. When prices rise, wages must follow, when wages go up, prices must keep pace. The wage-earner demands that prices drop while wages remain stationary or even continue to go up; the employer of labor has about given over hope of declining wages, but insists that prices must rise while wages stay put.

And between the two millstones right in the dead center of the vicious circle are some millions of salaried workers who call upon Heaven to witness that whatever happens they must pay, says the Saturday Evening Post.

To the demand for a solution of this puzzling mess there are many answers. We are not going to invade the field of the economist to venture an opinion upon the thousand and one panaceas that have been put forward, for we are not at home in that field. But there is one proposition which can be supported without any knowledge of the mysteries of economics; one that is mathematical in its simplicity, direct in its bearings, and clearly within our field.

### Apply This to Yourself

If we hire a boy to pick blueberries at a dollar a day, and he picks ten quarts, the cost is ten cents per quart. If he doubles his output he cuts the cost to five cents. If he knocks off in the middle of the day to go swimming, and reports at quitting time with only five quarts, the cost goes up to twenty cents a quart; and if he himself comes round the next day to buy blueberries, he may kick at the price based on this figure, but he must pay it.

All this is plain enough. There is no reason why the application of the principle in other fields should not be equally plain. If a linotype operator or a lathe hand or a carpenter or a railroad repair man or anybody else in the world loafs on his job and thereby cuts down his production, he automatically increases the cost per unit of his product. If he is working for the Government he may not thereby increase its price to the consumer—which means himself and everybody else; but even the Government, while it doesn't have to earn its keep, has to meet its deficits, so he at least raises taxes—his own and everybody's else.

In no uncertain terms Mr. Wilson pointed out to the railroad men that the remedy for high prices is not decreased production. His remarks had to do with production decreased through organized refusal to work at all; they are just as applicable to individual refusal to work, to work full time, and to work effectively. The world faces a shortage of every manufactured article, and at the same time a shortage of labor. It is perhaps natural, now that there are more jobs than men, for the worker to relax his efforts. It is understandable that he should feel that he need not hustle and that he is not going to hustle. But there will not be lower prices until he gets rid of that feeling.

### No Lower Prices Until Each Banishes Such Ideas

The law of supply and demand is still doing business at the old stand—even in Russia, where it was officially abolished. If demand exceeds supply, prices must rise until demand drops to a level with supply. The only way you can possibly make 100 pairs of shoes go around among 200 prospective buyers is to put the price where half the buyers can't reach it. On the other hand, if supply exceeds demand, prices must fall until they attract new buyers to swell the demand.

Digitized by Google

If the world is short of sugar and shoes, steel and wool and copper, automobiles and ships and houses, coal and wheat, the remedy does not lie in producing less of these things. This is plain to the point of absurdity when thus put down in black and white; in practice, where it can be obscured by a hundred considerations which really have nothing to do with the matter, it may not always be so plain. It is always true, however, and always inescapable.

There is just one way to force prices down under present conditions—that is for us all to pitch in and produce so much of everything that at the same time prices can and must go down. Cut the cost and boost the supply and prices must drop. But as long as we go on cutting the supply and boosting the cost by loafing on our jobs, prices will hold their upward course.

## H. B. BURLOW RAISED ON SIMPLEX JACKS

"A jack for all trades" might well be the motto for the Templeton-Kenly Company of Chicago. There is hardly a well informed member of any trade who does not know Templeton-Kenly jacks. They not only go to the hardware

H. B. BURLOW

trade, but to the machinery trade, the automobile trade, the miners, railroad men and logging workers.

Sales Manager H. B. Burlow can well be referred to as a "Jack King" or perhaps better as the Ace of the Templeton-Kenly organization, for it is he who is responsible for the sales of Simplex industrial jacks to the automobile and equipment trade, and it is he who comes in contact with the hardware buyers. He has just made a complete circle of the western trade, attending the convention at Del Monte, and calling on every distributor and representative of the Templeton-Kenly Company west of Chicago.

For the last few years, the Templeton-Kenly Company has been handicapped by its war work and by industrial conditions. During the war the Company turned out ordnance and track jacks for the War Department, and it is only now that the Company can again handle its private trade adequately.

Mr. Burlow can well be proud of the fact that there are from thirty to forty jacks in the complete Simplex line and that the Templeton-Kenly jack is the only one in which drop forgings are used. The fact that the Company has been manufacturing railroad jacks for many years and specializes and concentrates on jacks is ample guarantee of the thorough-bred superiority of the automobile jacks now produced.

In its sales policy the Company maintains a strict allegiance to the jobber and the jobbing trade, and deals directly only with those houses who carry an ample stock and sell for resale.

Representing Simplex jacks in the West as well as in the South are Sanford Bros., with offices at Chattanooga, Tennessee, and San Francisco, California, as well as in Chicago.

## IMPERIAL VALLEY COMPANY BUILDS

One of the western institutions whose growth has been phenomenal is the Imperial Valley Hardware Company, with its home office at El Centro, California, and branches throughout the Imperial Valley. The development of the Imperial Valley, in the southeastern part of California, has been very rapid and the growth of the Imperial Valley Hardware Company has kept pace with the growth of the community. The company does both a wholesale and a retail business and has branch stores throughout the territory.

Typical of the growth of the institution is the new building into which the company is just moving. The first unit has just been completed and the business offices and some of the stock have been moved into this first section, while the remainder of the building is being constructed. In this new building the company will have a frontage of seventy-five feet on the main street and will be housed in a class A structure with two stories and a mezzanine floor. President Geo. W. Anderson and Secretary Loward P. Meyer will have their offices on the mezzanine floor in the rear. We hope to publish a full description of the new store with pictures in a later issue.

## AN INCOME TAX SCHEME TO BEWARE OF

(Copyright by Elton J. Buckley)

In connection with the making up of business men's income tax returns, a scheme is being worked by insurance solicitors which, if followed, may get the business people who do it into trouble with the government. Since having trouble with the government is not pleasant, particularly when it takes the form of an indictment for attempting to defraud the government of tax, I think I had better say something about the scheme and how it is being worked.

Most readers hereof know that under the government's uniform regulations, ordinary insurance premiums paid by an income tax payer are not deductible from income. In other words, you can't charge them up as expense. There are several regulations on the subject. Regulation 33, No. 1,908, Sec. 109, provides that premiums paid for life insurance by the insured are not deductible, and a second regulation provides that when officer, or valued employe, for the benefit of the business, the premiums even then are not deductible where the person or a business takes out insurance on the life of a partner, or whose life the policy is placed is directly or indirectly a beneficiary. He always is a beneficiary when his business is, and therefore in the usual case premiums on such insurance are not deductible as expense.

On the other hand, where an employer, as a benefit to his employes, insures their lives under group insurance, the premiums are deductible as expense. So for obvious reasons can fire insurance premiums be deducted where the insurance is on business property.

Now the scheme I am about to describe is over the following recent regulations (Sec. 214 (a), Article 101, Business Expense):

A taxpayer who borrowed money for business purposes and was required to take out life insurance in favor of the lender as security for the loan, is entitled to deduct the premiums paid for such insurance as a business expense under Section 214 (a) 1 of the Revenue Act of 1918; however, the premiums will cease to constitute a business expense upon maturity and payment of the loan.

This regulation is sound because when life insurance is given as security for money owed, or for an unpaid account, as is often done, it is just as much a business expense as interest paid on money borrowed from the bank. But clever insurance men, who think they see in this a chance to get some new business, are going to the business houses and saying, "Here is a chance to take out some life insurance and charge up the premiums as business expense. All you need to do, when you get the policy, is to turn it over to your bank, or anybody else you borrow money from, as security, and that entitles you to consider the premiums business expense. When you pay that loan off turn the policy over to some other creditor in the same way."

Now, I agree that this is possible and legal—if the bank or other creditor asks in good faith for the policy as security. When that happens, the transaction comes squarely within the provisions of the above regulation. But when the bank or other creditor hasn't asked for the policy as security, and has no need to, or where it should do it merely because the borrower asked it to in order to further the scheme, then the thing is a fraud on the government. Moreover, it would be a very easy fraud to prove. If you are a business man who needs to borrow regularly from somebody, as most business houses do, and your collateral is not sufficient without it, you have already been asked for insurance security for the loan. If your assets are good enough without it, then you don't need to give the policy as security, and the minute you do it the government may accuse you of forcing additional (and unnecessary) security on the creditor merely so you can charge the premiums up as expense.

Such a fraud would stand out pretty clearly where the facts are as I describe, and it is quite conceivable that if the government prosecuted the defendant might get a prison sentence. You see, the only penalty in such cases is not merely being required to pay a tax on the amount held out, together with a small penalty. It is (in case of fraud) a heavy fine or a sentence in jail.

---

## SARGENT COMPANY TO ADOPT THE UNIT SYSTEM OF PRICING

Owing to the many price changes that have affected their entire line, Sargent & Company, New Haven, Conn., have found it necessary to issue a revised price list applying to their general hardware catalogue.

In making this revision, they have decided to put into effect the unit system of pricing (or decimal system, as it has also been called) and all prices are therefore based on that system. Most of the items are priced by the single piece, but where this is not practicable the goods are priced by the hundred. Articles that are naturally used in pairs are priced by the pair and those which are used in sets are priced by the set.

The advantages of this system of pricing have been shown by articles that have appeared in the trade papers and in discussions at various hardware conventions. It has met with the favor of many merchants as a method which will save time, reduce labor and lessen the liability of error in sales and accounting work by simplifying the mathematical operations necessary to arrive at a price.

The change in the pricing unit necessitates a change in the packing unit. The company is therefore planning to change the number of articles packed in a box from dozens and grosses or fractions thereof to the most suitable quantities of which 100 is a common multiple, careful attention being given to the nature of the goods and the requirements of the trade. With a line so large and varied as that manufactured by the company it will not be possible to put this change into effect at one time but the new packages will be put into use as rapidly as possible. In the meantime orders will be filled with the packages heretofore used.

This change has been made after careful consideration and it is the belief of the company that its advantages will become more and more apparent and its benefits will be appreciated as the trade becomes accustomed to the new method.

## ONE OUT OF EVERY 100 PEOPLE IN U. S. EARNS LIVING BY RETAILING

"In other words, there are more people in retail selling alone than in any other line of endeavor, except agriculture. Yet, after twenty years roll around, out of every 100 who have embarked in retail store-keeping, less than five still have their names over the door," said a speaker at a recent convention.

**Cause of Failures**

"The financial agencies show that 15,000 retailers fail each year, and 85 per cent of them —12,250, did not advertise!

"Yet, the outstanding reason for the failure of more than 50 per cent of these was over-buying.

"Over-buying means too much "stick stock."

"Now, if profits lie in quick turnovers, and failures are avoided by having money in the bank—and advertising will not only dispose of surplus stock but also bring in the money to put in the bank—you can see not only the advisability but also the absolute necessity of advertising.

"Some of you remember when there were practically no mail order houses.

"Some of you remember the time when all the mail order houses put together (and it was less than 10 years ago) did not do 4 per cent of the retail business in the United States.

"How do they stand today?

"Of the $15,000,000,000 worth of retail business done annually, the mail order houses do $1,500,000,000—10 per cent.

"And how do they do it?

**They Advertise!**

"The mail order houses and the department stores who advertise do more than 25 per cent of all the retail business done in America and their proportion is growing all the time. Yet, altogether they only represent 30,000 of the retail stores in the country—or about 3 per cent.

"That's why I say 'Advertising' is that force which puts 'The busy into Business' and the 'sing' into merchandising'—and takes the 'sin' out of both.

"There is something in your store that is bigger than the store—bigger than the building —bigger than the merchandise. You will find it mentioned at the very beginning of the 22nd Proverb:

"'A good name is more to be chosen than great riches.'

"Some of you wear 'Regal' shoes.

"The Regal Shoe Company estimates its name as being worth $2,500,000.

"Some of you wear 'Hart Schaffner & Marx' clothes.

"It is a 'little thing to look for but a big thing to find,' that little fellow sitting on horseback, blowing a horn.

"Do you know what tune he is playing?

"He is playing $15,000,000.

"Some of you wear 'Arrow' collars.

"Cluett, Peabody & Company estimate their good name as being worth $18,000,000.

"Some of you smoke 'Ligget & Meyers' tobacco.

"Their good name is worth $39,000,000.

"Other may smoke 'American' tobacco products.

"Their good name is worth $54,099,430.

"F. W. Woolworth & Company, Ten-Cent Stores' figure their good will at $50,000,000.

"What is your good name worth?

"How do you stand in your community?

"The point I wish to make is this:

"Instead of shrieking 'Sales—Sales—Sales' —instead of eternally pounding on your merchandise and lauding your values—devote a little space to calling attention to your store; to your name; to your policies—you will be building infinitely more permanence to your establishment and its standing in the community.

"You would be less apt to fall among those 95 out of every 100 who go out of business inside of 20 years."

---

## 1300 YEARS BEFORE CHRIST THIS EGYPTIAN KING KNEW ADVERTISING

Rameses II threw a stone into the Nile and sighed.

He had spent his whole life fighting and had licked all his neighbors. He had added many shekels to his treasure vaults. But that was not enough for Ram. He wanted his fame to outlive his mummy.

"But how?" mused the great Pharaoh. The royal printing press was not yet invented and the palace house organ was out of tune.

"I have it," quoth Mr. R.

He called together all the stone masons in the kingdom, and they chiseled his deeds of valor in rock and set it up where all might see.

Some people may call this history, but it wasn't. It was advertising.

This was four thousand years ago. Now Rameses has a cigarette named after him. Advertising did it.

---

Jane Addams was crossing the ocean once and, having been ill herself, started to sympathize with an Irishman in the second cabin, who apparently was having a very active time.

Laying her hand gently on the Irishman's shoulder, Miss Addams cried: "I am very sorry you are so ill, my good man. Your stomach is only weak, that's all."

"Wake stummick nawthin," answered the Irishman. "Oi'm throwin' as fur as eny man on this side of the ship, mum."

## HACK SAWS AND THEIR USES

(An interesting and helpful booklet of 64 pages, published by The L. S. Starrett Company, Athol, Mass. Copies sent free on request.)

"The beginning of all wisdom in the practice of Hack Saw Thrift is to comprehend fully the many factors that enter into the production, purchase and use of hack saws—they all have their influence as regards the result."

To not only define these factors, but to explain fully their practical application to shop work, is the purpose of "Hack Saws and Their Use," from which the preceding paragraph is quoted.

Though the hack saw is one of the most common tools, it is also one of the most misused. This is partly owing to the general belief that "anyone can run a hack saw," and partly because heretofore there have been no really practical books on the subject. Books on lathes, planers, shapers, millers and other machines are plentiful, but the man who would gain a thorough knowledge of hack saw practice could acquire it only in the school of experience—a lengthy and expensive method. For this reason, this new publication is a much-needed and very welcome addition to the literature of the machine shop.

The making of hack saw blades is the first subject discussed. The book explains how the composition of the steel affects the blade's cutting qualities, and touches upon the proper methods of heat treatment and tempering.

It takes up next the question of hack saw teeth, their proper set, shape and pitch, and how each of these factors affects the efficiency of the blade. Diagrams show the different shapes of teeth—standard, positive, negative and hook—and demonstrate just how each is affected by wear. Pitch, and how it is determined by the size, shape and kind of material cut, is also given its proper share of attention.

An interesting feature of this part of the book is an explanation of how hack saw teeth cut, and why the "Standard" type of tooth, with its vertical cutting face, which always "bites" into the work at the same angle regardless of the amount of wear, is preferable to teeth of other shapes.

The slope of the back face also "has a direct effect upon the durability of the blade and its total output of work. When a saw becomes worn, the ends of its teeth are flattened or rounded. As the area of contact with the work increases, the pressure necessary to make the saw bite increases. The strain of the increased pressure must be borne largely by the back face of the tooth. "Eventually this flattened area will become so great that it is impossible to apply sufficient pressure to make the saw cut without breaking the blade. Consequently, the amount of work that can be got from a saw depends largely upon the volume of tooth available for wear before this limiting area of contact is attained."

From this explanation, too, we see the importance of gradually increasing the pressure as a blade becomes worn. Pressure is such a vital factor in efficient cutting that it fully deserves the prominence given it in this book. It is the factor which is most directly under the control of the operator, and every hack saw user who wishes to get the utmost service from his blades, will find the recommendations as to pressure given in "Hack Saws and Their Use," of great value.

The proper starting weights for one make of blade have been carefully worked out and are given in a Hack Saw Chart. This chart, based upon the division of materials into nine different classes, lists the pitch, gage and dimensions of the blades which practice has shown to give the best results with each sort of stock, both in hand frames and power machines. Owing to variations in the composition of even the same class of materials, it has been found impossible to fix any absolutely definite pressure, but the weights given are sufficiently accurate to provide a working basis from which to start.

The importance of gradually increasing the pressure after the first cut, is strongly emphasized. No matter how nearly correct the weight is when the saw is started, more pressure must be added after a certain number of cuts have been made. This not only reduces the time per cut to a point within the limits of efficiency, but also adds to the life of the saw.

The book also brings out the danger that lies in applying insufficient pressure at the beginning of a series of cuts. "Better too much weight than too little" is the conclusion arrived at after a long series of tests to determine the effect of various pressures on the life and efficiency of blades.

Charts and diagrams are freely used to make every point clear. These charts illustrate the results obtained by both flexible and all-hard blades with varying combinations of pressures and speeds, with and without lubricants.

In these tests, it was proved that the liberal use of water or "compound" (never oil), except on iron castings, increases the cutting life of blades at least one hundred per cent. Greater speed may also be used than when cutting dry.

Directions for making tests of blades are given, which will enable hack saw users, if they so desire, to conduct a series of experiments to determine the blades which are best suited to their requirements. Such tests as these aid in devising systems for figuring cutting costs.

Cost per cut is taken as the only true measure of hack saw efficiency and output, and tables are given to assist users in finding exactly what they are paying out in hack saw costs. These tables take into account not only the cost of blades, but the outlay for labor and overhead as well.

"Hack Saws and Their Use" is a book for practical men, written to meet the requirements of every day shop practice. Buyers and users of hack saws, no matter how broad their experience may be, will find it very profitable reading.

## DISPLAY HIGH SCHOOL WORK IN THEIR WINDOW

A successful show window display of the best work of the vocational department of the local high school was recently held by the Northwestern Hardware Company at Bellingham, Washington. There is, of course, an intimate connection between the hardware business and the tools and materials used in the vocational department of high schools all over the country.

At the close of the term, the Northwestern Hardware Company arranged with the instructors in charge to hold a contest for the best work of the year on the part of the pupils. The best product in each of the lines of workmanship included in the course was exhibited in the Northwestern Hardware Company's show window.

Samples of wood turning, blacksmith work, pattern making, machine work, machine shop work and machine drawings were displayed, as well as articles and finished products involving the different processes. By co-operating with the instructors at the school, the Northwestern Hardware Company secures a market for the disposal of many tools and appliances and also gets the students into the habit of using their store and of regarding it as a center of activity in the community.

Furthermore, all members or the community are proud of the work done in the high schools and a certain dignity and prestige is reflected on the merchant who exhibits the works done by the pupils.

The Central Hardware Company of Hollywood, California, has purchased the former hardware business of W. S. Turley of the same place, and will operate it as a branch of their present business. James Langroise will be in charge of the new store. The main business is located at 6673 Hollywood Boulevard.

## GET YOUR CUSTOMERS TO GIVE THEIR BABES A WEIGH

Most hardware men were babes once. There are a few exceptions, but most of them have had babies—in their family, and perhaps this need not be necessarily written in the "past" tense, neither. Who can tell what the future may have in store for them and their friends?

Most hardware merchants overlook the opportunity to sell scales. They generally sell them only when called for. They make no real effort of their own initiative. Here is a suggestion every merchant can use in promoting the sale of scales. Send out to your mailing list of customers a card on which is neatly printed the following table of weights that babes should weigh at certain ages.

This card may be made the basis of a neat enclosure, having the merchant's advertising and address, with the suggestion that he can furnish scales not only for babies, but for people of all ages and for every purpose.

This is an idea that the live merchant will know how to follow up without further suggestion.

Lots of people are putting up with old refrigerators which are eating their heads off in the ice they use. A refrigerator demonstration will pay if you actually demonstrate that gaping seams, leaky linings, and sagging doors are all a menace to pocket-book and health.

---

## AIN'T LIFE FINE TODAY!

Sure this world is full of trouble;
I ain't said it ain't.
Lord! I've had enough and double
Reason for complaint.
Rain and storm have come to fret me;
Skies were often gray;
Thorns an' branches have beset me
On the road, but say!
Ain't it fine today?

What's the use of always weepin',
Makin' trouble last?
What's the use of always keepin'
Thinkin' of the past?
Each must have his tribulation,
Water with his wine.
Life, it ain't no celebration.
Trouble! I've had mine;
But today is fine!

It's today that I am livin',
Not a month ago;
Havin', losin', takin', givin',
As time wills it so.
Yesterday a cloud of sorrow
Fell across the way;
It may rain again tomorrow;
It may rain—but say!
Ain't it fine today?

WEIGHING THE BABY

The new baby should be weighed once a week during the first two months, then every two weeks until one year of age, then once a month during the second year.

Weight is an excellent indication of the baby's state of nutrition. If it does not gain for several weeks, something is probably wrong. The baby is either not getting enough food, or not digesting its food properly, or is not sleeping enough, or getting enough fresh air.

A baby should gain during the first four months, about half a pound a week, from four to six months about one-third a pound a week, and from six months to a year, about a quarter of a pound a week.

Here is an average schedule of weight development:

| | Pounds |
|---|---|
| 7 days old | 7 |
| 2 weeks old | 6½ |
| 3 weeks old | 7½ |
| 4 weeks old | 8 |
| 2 months old | 9½ |
| 3 months old | 11 |
| 4 months old | 12½ |
| 5 months old | 14 |
| 6 months old | 15 |
| 7 months old | 16 |
| 8 months old | 17 |
| 9 months old | 18 |
| 10 months old | 19 |
| 11 months old | 20 |
| 12 months old | 21 |

The loss of a half-pound during the first week is explained by the fact that the mother's milk does not come until the third day, and as it should, as a rule, have nothing but water until then, it loses about half a pound, but gains its first birth-weight back usually by the end of the second week, and if properly nourished gains steadily afterwards.

## MANAGES BRIER HILL SALES AT CHICAGO

The Brier Hill Steel Co. announce that John D. Caldwell has been appointed district manager of sales in the Chicago territory. Mr. Caldwell is succeeding to the position vacated by their former district manager, Joseph A. Reed. Mr. Caldwell has been assistant to Mr. Reed for a number of years and is well known to the buyers throughout the Chicago territory. This promotion comes as a deserved recognition of his ability.

## CONFESSIONS OF A SALESMAN—GETTING THE DEALER STARTED

When I first started to sell goods on the road I had the false impression that to sell properly, I must keep up a rapid-fire line of conversation. I had heard people say, "He would make a good salesman, he can talk so long and well." From this remark I gained the impression that a person to be a successful salesman should be persistent, talkative and aggressive.

Today I know better, that is, I know all the qualities above must be possessed, but in moderation. The lesson was driven home by the following incident.

I was selling a line of builders' supplies, which were in strong demand; in fact, it took little salesmanship to sell the line, for the simple reason that the goods were well advertised in trade journals and in the limelight of publicity. I went merrily on my way selling almost every dealer until I formed the impression that dealers simply must have my goods.

All went as merry as a wedding bell, until I struck a small town in Ohio, in which was located a dealer who had lately acquired the stock, fixtures and good will of a dealer who handled another line of hardware.

Here, I thought, was my chance to show the newcomer how much at fault his predecessor was by not stocking up with my line of goods. When I called upon him I found him deep in an inventory. It seemed as if he wanted to know how much he had overpaid for the goods on hand. I did not trouble him at first, as I saw it would be useless. So with a polite word or two I left and called again the next day, only to find him still deeper in the work.

On the occasion of my next call, however, I opened up my line of sales talk, but the merchant did not take kindly to my suggestions, but I kept on driving my pleas home. I said, "I simply want to get you started." On this call I could not induce the man to "get started," and I did not want to leave town without making another attempt to place my line before another salesman would come along and secure the account. Next day I was back again and spent a full half day trying to nail my man, but he kept putting me off no matter how many times I said, "I want to get you started."

About 5 P. M. I thought the merchant was weakening under my rapid-fire talk and that I had him, for he got down from a step ladder and said, "So all you want is to get me started, is it? You have spent two days trying to let me tell you you have at last succeeded. First, I am going to start with you. You get started at once to find the door, before I start, for if I start first you will not be able to start, and the next time you come into this store when I am busy, don't start me again. Now start."

His method of "getting started" took my breath away, but I learned a valuable lesson and one which has caused me to be more careful in the future, not to be over insistent, cut out the rapid-fire talk and use better judgment when a man says he is busy.

---

## YOUR ABILITY IS YOUR CAPITAL

To get a proper view of your salary is to compare it with the interest on money invested. If the average conservative investment be at 5 per cent, then a man whose personal efforts warrant a salary of $3,000 a year has the same income he would have if he had $60,000 invested. If he gets an increase of $1000 a year, he has increased his capital 33 per cent and draws an income equal to an invested capital of $80,000.

There is no question that ability without money-capital is better than money without ability. The progressive man is often able to increase his earning capacity more than the man of money without ability could hope to increase his capital in the same length of time.

If a man getting $60 a week improves his ability so as to get $80 as the result of a year's improvement, he has made a living and virtually cleared $20,000 to add to his capital. Some business enterprises with $60,000 invested would be considered prosperous if they could do as well.

Opportunity for self-improvement is open to every man. The salaried man who has big ideas as to what he would do if he were at the head of a business of his own would do well to consider his ability as his business, with a capital of twenty times his annual salary, and so utilize all his good intentions in the effort to improve his talent by practicing on the business in which he is now engaged.

---

## CUTLERY EXPORTS ON BASIS OF $24,000,000 A YEAR

During the month of March cutlery valued at $2,000,000 was exported and the total export value of cutlery for the first eight months of the U. S. fiscal year has already reached $8,675,000, which is $3,620,000 over the figures of the same period of last year and nearly doubles the performance of the first eight months of the fiscal year 1918. The cutlery makers find it very difficult to fall in always with the demands of their foreign customers, as they have their hands full to satisfy the growing demands of the home market. Every effort is made to increase the volume of production until it is large enough to take care of the requirements of the domestic and the foreign markets.

# General Manager Pitkin Tells One of A. Baldwin & Co.'s Secrets

AMONG the great hardware institutions of the South and the Southwest none has been more important in the development of the trade and in the furtherance of the best business principles than A. Baldwin & Co., of New Orleans, Louisiana.

Established in 1822, A. Baldwin & Co. have years of experience and square dealing behind them so that the institution is regarded as solid and exemplary not only by their customers, but by the entire trade of the United States. The Cut Keen trade mark of the A. Baldwin Co. has been established as one of those brands that stands for quality and honest performance wherever it appears.

It is but natural that the character of any institution of the type of A. Baldwin & Co. should depend upon the individuals high in its management. No matter what the size or the history of any organization it must depend upon the active men for its life and for its business policy.

**W. M. PITKIN**
General Manager of A. Baldwin & Company, New Orleans, Louisiana, and a prominent officer of the Southern Hardware Jobbers Association. Mr. Pitkin's success has been founded on hard work, and he has favored us with a word of advice to young men just entering the hardware business.

General Manager W. M. Pitkin of A. Baldwin & Co., is one of these individuals who is responsible for the continuance of its good name and fame. For thirty-three years Mr. Pitkin has contributed to the reputation of A. Baldwin & Co., and necessarily he has come in contact with every phase of the business. As is the case of so many of the men who have arrived at the top in the hardware world, Mr. Pitkin began at the bottom. He has held practically every position in the institution and so knows the business, the internal workings, and the company's trade thoroughly.

From his wealth of experience, and after these thirty-three years of hard work of conquering obstacles and of constant solving of problems, Mr. Pitkin's summary of his experience will be most valuable and interesting to everyone of our readers:

"From the beginning to the moment in which this is written, the fact stands out as bright as a star that no information worth while, no advancement, nor education in business is accomplished without real hard work. Hard work is the greatest educator for one's mental, moral and physical condition, and is worth more than all the text books in the world."

The secret of Mr. Pitkin's success, the secret of the growth and standing of A. Baldwin & Co., the secret of any strength or growth in the business world is hard work, real hard work.

## CHARGES MISUSE OF NAME

The McElrath Tire & Rubber Co., a new tire concern located in Ravenna, Ohio, has been allowed a temporary injunction restraining The McElrath Building Co., also of Ravenna, from using the word "McElrath" in connection with its business.

In the application for injunction, the plaintiff alleges that there is no person by the name of McElrath connected with the defendant company and that the adoption of the name was "an artifice calculated to produce and to perpetuate a fraud both upon the public and plaintiff."

Judge A. S. Cole granted the temporary injunction under bond of $5,000. Milo E. Evans, secretary of the plaintiff company, swore to the petition.

The McElrath Tire & Rubber Company is now erecting a large factory in Ravenna and it is expected that production of the McElrath tire will get under way within a few months.

---

That the automobile accessory trade is becoming important in Alaska is evidenced by the fact that Paul Behrendt of Juneau is erecting new quarters to house his machine shop and automobile accessory establishment.

## INDIA MAKES TEXAS CONNECTION

Of interest to the tire trade is the announcement of a distributing connection recently established in Dallas, Texas, by The India Tire & Rubber Co., of Akron, Ohio. The new concern is known as The India Tire Co., of Texas, and its territory embraces practically all of the Lone Star State. It is understood that this new distributing point immediately takes over more than a million dollars' worth of the India product. G. T. Lownsberry, widely known in the tire trade, is vice president and general manager of The India Tire Co., of Texas, with T. E. McLarty, a prominent Texas automobile man, as president of the organization. McLarty is in charge of the distribution of Nash cars throughout all of the Texas territory.

---

A recent feature window display by the Baldwin Hardware Company at Klamath Falls, Oregon, showed a real honest-to-goodness working kitchen with flap jacks on the table, suds in the washing machine and a cook at the range. It is reported that the display not only sold hardware but contributed to the custom of local grocers and fuel merchants.

*Demonstrating the AutoStrop Razor is service to the customer*

# One of the biggest secrets of retail success

## *What the manager of a big retail organization discovered about the value of the "little things" in building sales*

*AutoStrop Razors sell themselves when the salesman knows how to demonstrate them. Show the customer how the blade opens for cleaning like the leaf of a book—how the same lever that releases the blade also adjusts it for close, medium or light shaving*

THE head of a chain of eleven retail stores, who has increased his business in four years from $750,000 to over $4,000,000, sums up the secret of success in the following words:

"Store personality — that's the keynote of everything we've done. Whether it's ash trays placed in convenient spots about the store for the men, rest rooms for the women, or any other detail of service to customers, we have found it's always the 'little things' that count most. It's the 'little things' on which customers judge the business as a whole."

Attention to the various "little things" of a business is only another name for the biggest word in retail merchandising—SERVICE.

It is service to the community for a dealer to standardize and specialize on nationally advertised, fast-selling lines that mean rapid turnover and quick profits—to concentrate on those products that he himself believes in, is enthusiastic over, likes to stand back of, fight for if need be. When your store is "sold" on a product in this way, it is easy to sell it to others.

It is this new kind of service that enabled a dealer out in Iowa to take in $6,000 in less than two years on sales of AutoStrop Razors.

Digitized by Google

# *The selling power of a real demonstration*

No matter what a man comes into this dealer's store to buy, the talk is led around to shaving economy and the AutoStrop Razor —then for a real demonstration: The customer is shown just how the AutoStrop Razor strops itself —just how it is adjusted instantly for a close, medium or light shave —how easy it is to insert a blade when a new one is desired.

Then follows the most important part of the demonstration—***the salesman gets the customer to handle the razor and strop it himself.*** Nine out of ten men are immediately interested.

## *Other successes*

A dealer in New Jersey has made his store known for miles around as "Razor headquarters." His plan is a simple one—offering an AutoStrop Razor free to anyone who could make the stropping mechanism cut or injure the strop while restoring the edge.

A Pacific Coast dealer gives an AutoStrop Razor free to any Coast League baseball player hitting a home run at the local park. He has established himself as a "live wire" in the cutlery business, and his trade in all lines is increasing.

These are practical business building ideas that have proved their worth with other dealers. Try them out.

## *Watch the advertising*

Here is another way to give your store personality. Watch for the AutoStrop advertisements when they come out in Collier's Weekly, the American Magazine, Literary Digest, Red Book, Life, Cosmopolitan and American Legion Weekly. Cut them out—mount them on a card and display them with your AutoStrop trims. Besides serving as a good tie-up, these advertisements will show your customers that you are a live, up-to-the-minute dealer.

Our advertising campaign this year is the strongest we have ever run. Ads like those on the right will appear in a total of 320 newspapers, covering every trade center in the United States—in addition to the magazines listed above. The story of the AutoStrop Razor will reach a total of 45,000,000 people. We are pushing right ahead—will you be with us?

Write for our merchandising plan and other dealer helps. We can help you to duplicate the success you have just read about.

## REACHING WOMEN THROUGH WINDOWS AND PRESS

(By John Hardy, Honeyman Hardware Co.)

It does not take a keen observer to note that the hardware store is essentially a "man's" store. There's a dearth of women's trade in the average hardware store that should not be.

The lack of women shoppers is easily explained when we consider that the department store is essentially a "woman's" store and no doubt it will largely continue to be so in the future.

The hardware store is entitled to women's trade as well as the department store, at least in part, if the hardware dealer cares for their business.

### What Is the Remedy?

The average hardware dealer is a mighty poor user of printers' ink. In other words, he does not do much newspaper advertising nor does he do much in the way of "cut" or special prices.

Now, of all things, women like to read ads, especially if something is to be sold at a reduction price. The department store offers these every day of the week, and furthermore offers the woman everything she needs from basement to garret, all under one roof, thus saving her much extra tramping to purchase the same goods at specialty stores.

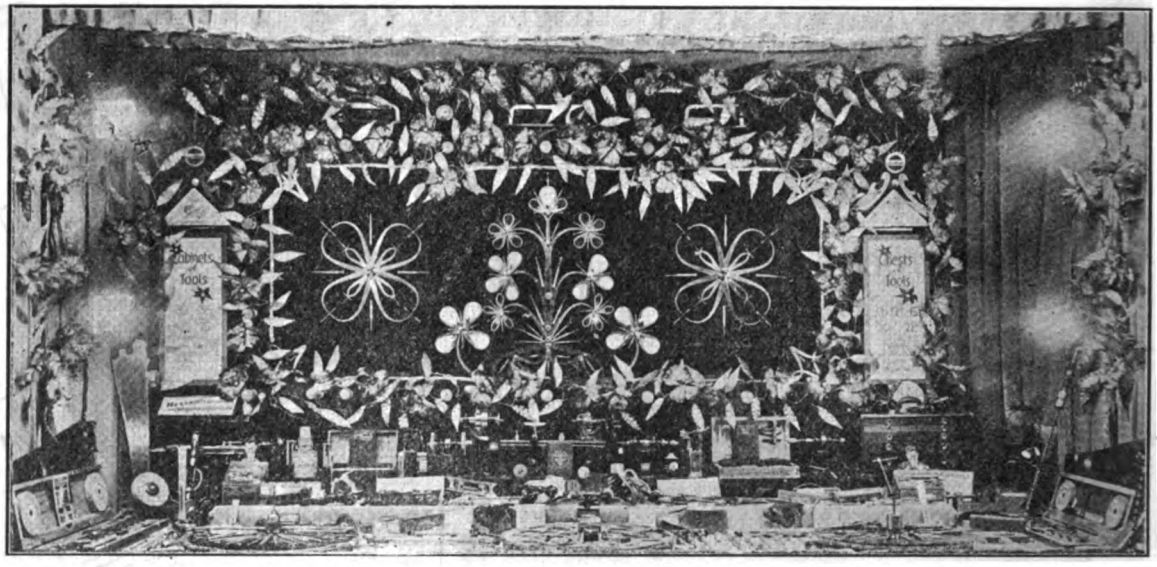
It is no easy task, therefore, to draw her away from the lure of the department store.

### Learn from the Department Store

Without any doubt, department store methods in newspapers and show window advertising capture a large proportion of a city's business. If the hardware dealer wishes to successfully compete he must adopt their methods even if it be in but a minor way.

First, he must do more newspaper advertising, not by small inconspicuous advertisements but by ads large enough in size that they be not lost or buried in the avalanche of ads that appear each day in our daily papers.

Don't presume from this that he is to advertise each day of the week. Experience has taught the writer that this cannot be done. But come through when you do with an advertisement that can be seen or you will waste your money.



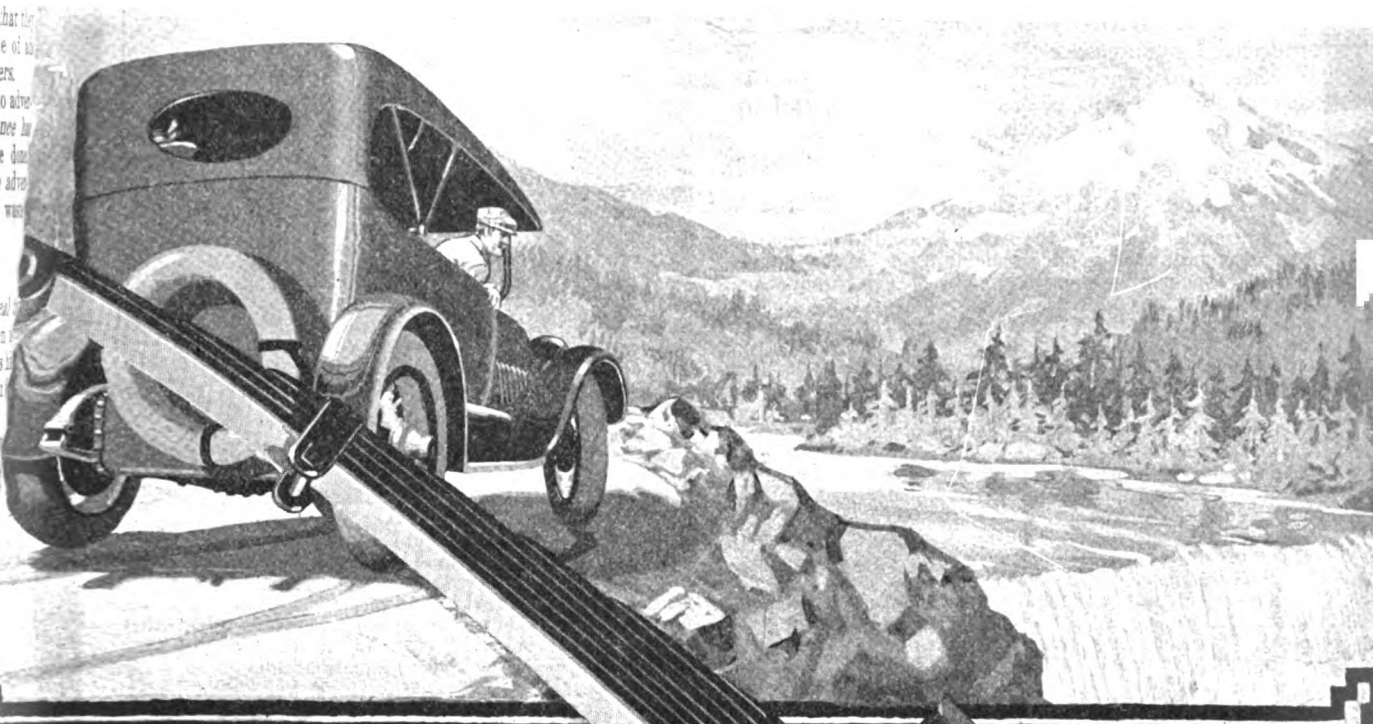
### Sales Windows Draw Trade

If newspaper advertising does not appeal to the hardware dealer, his only recourse then is through show window advertising. There is his only chance to secure a fair share of woman's trade.

No hit and miss plan of window displays will draw trade. Nothing but a straight-from-the-shoulder system of window display will land the business. Follow the department store methods in making up displays if necessary. Make your windows so attractive that the passer-by will be impelled to examine its contents carefully and in detail.

Display goods from each department, such as tools, builders' hardware, stoves, kitchenware, sporting goods, etc., and make special and strong appeals on seasonable goods.

Get the public to talking about your show windows and what you have for sale. Your



Whatever John Hardy of the Honeyman Hardware Co., Portland, undertakes is always well done. Although a young man, Mr. Hardy has had the benefit of the most splendid training. His associates are men who believe thoroughly that "genius is the capacity for taking pains." That Mr. Hardy is a genius, anyone who has seen any of his window displays will admit.

Here is another one of those high grade H. H. H. windows, which is, of course, Honeyman, Hardware, Hardy. There are ample goods in this window to illustrate variety of lines, yet it does not have that crowded appearance which is so fatal to a first class window.

# TREMENDOUS RESERVE STRENGTH

## That Means Safety In Emergencies

THE very newest of modern methods of manufacture endow Higgins Quality Springs for Replacement with strength sufficient to meet the severest demands of modern day motor traffic.

Especially designed machines have superseded the hammer and anvil manner of production—giving an accuracy of shaping and tempering impossible heretofore—and service strength never before attained.

This increase of quality in quality that for years was accepted as the highest attainable degree of merit—means increase in business for those who deal in Higgins Springs.

Our policy of sales is unique. By distribution through Jobbers a service is given that is unquestionable in the merchandising of accessories—a clean-cut and a square deal to all. Our Springs are stocked at the most advantageous points. This means larger stocks to draw from, with better service to the dealer and user. Those who handle the Higgins line are always satisfied—a well established and thought of trade built upon service, quality and price.

Jobbers and Dealers who realize the value of this method of merchandising—who *desire a connection* which will enable them to create a permanent, ever growing *business—should* write us immediately.

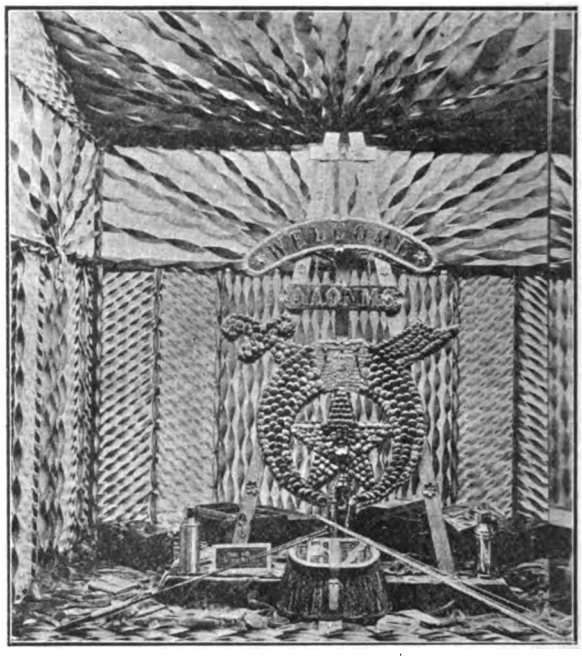
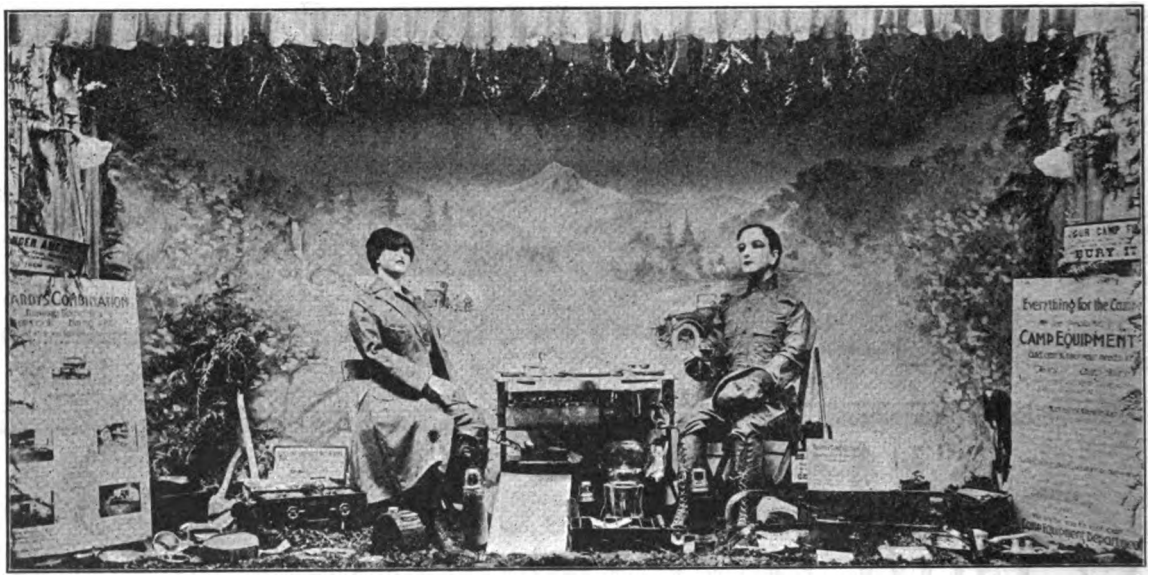
display must be of the "continuous performance" order, not spasmodic. Let your prices compare favorably with the department store. A combination of high grade window displays, some newspaper advertising and a fair comparison of prices will bring its reward in increased business.



Mr. Hardware Dealer, it's up to you to grow or stand still. "Take my advice, roll up your sleeves and go to it."

## LANTERNS INCREASE EGG PRODUCTION



A great stimulus to the sale of gasoline lanterns is the discovery that good artificial light in hen houses during the winter months increases egg production. This opinion is expressed by officials of the Coleman Lamp Company, which has its main offices and factory at Wichita, Kansas.

It is stated that dealers all over the country have made many sales of gasoline lanterns to poultry raisers for the purpose of lengthening the hen's working day. Acting upon the success of the experiments conducted at Cornell and Purdue universities, and other institutions, poultry growers have tried artificial lighting of their hen houses during the winter months with gratifying results. Consequently, it is thought that the sale of gasoline lanterns to poultry farmers will be considerably increased during the coming autumn.

Such eminent poultry authorities as James E. Rice, professor of poultry husbandry, Cornell University, and Prof. Luther Banta, of the poultry husbandry department, Massachusetts Agricultural College, attest the great value of artificial lights in the hennery. Leading poultry journals and farm papers have shown the methods and the results of such experiments, and many illustrated articles picture the Coleman Quick-Lite Lantern being used. A unique feature of the poultry show recently held in Wichita was a hen-house lighted with Coleman Quick-Lite Lanterns.

The above window display of the Honeyman Hardware Company of Portland, Oregon, was made during the Shrine Convention, held there recently, and was a beautiful piece of work. The scimeter and crescent and the fixtures outside of the easel and letters were made entirely out of Spinner blades in the following colors: nickel, copper, brass, black and aluminum. The easel was six feet high. The trimmings were made with crepe tissue paper in the Shrine colors, viz: Red, yellow and green. The lights corresponding in color. The effect at night time was very beautiful, owing to the reflection of the colored street lights. The display was installed by Adolph Woelm of the Sporting Goods Department.

Here is a trade bringing window and it applies equally as well to getting the women's trade as it does the men's. It is one of these Stop, Look and Buy windows, for which the Honeyman Hardware window displays have become known. Merchants elsewhere can well pattern after this window, which is featuring the Hardy Combination Running Board Box, of which John Hardy is the inventor, and which is having a large sale.

Further particulars of this Hardy Combination Running Board Box is to be found elsewhere in this issue. Merchants are having a large sale on them.

## TAKE TIME TO KNOW YOUR MAN

**"Eat a peck of salt with a man before you trust him."**

This is such a busy age that we Americans are inclined to take folks at their face value—to be too trusting. This gives the unprincipled person a chance to take advantage of us when perhaps we least expect it.

We had an example of that very thing before the war. Then we thought everybody was a good fellow and every nation a nice neighbor. One day we awoke to discover that we had been terribly hoodwinked. It isn't a pleasant discovery at any time.

A man who is going into business and meditating taking a partner, went to his lawyer to talk the matter over. The lawyer put to him a few terse, crisp questions and waited without making any remarks, for his client to give the answers. This was the type of questions which the man of law desired to be informed upon:

How long have you known Jones?

How did you meet him?

What has been your impression of his integrity during this period of acquaintance?

What is your estimate of his business shrewdness?

Mention a few specific incidents upon which you base this estimate.

What do you know of the previous record of Jones?

Have you had the details of this record from anyone other than Jones himself?

What, in your opinion, are Jones' strong points?

Is he a promoter or a care-taker?

Will you be two of a kind, or will each prove a complement to the other?

Are you informed as to the expansiveness or frugality of Jones' habits?

Is he a good mixer?

Does it cost him a lot to do this mixing?

Are you as well acquainted with Jones and his natural tendencies as you should be with those of the young woman you would be willing to marry?

Are you positively informed of Jones' financial rating?

How is he regarded by the business men who have dealt with him?

Is he easy to get along with?

What are his personal habits?

By the time the lawyer had put these and a few other questions, his client had made up his mind that he really knew mighty little about Jones. In fact, it dawned upon him that Jones had appeared in town a few months previously and had taken his place as a man of affairs, but no one knew much about him or his previous history.

In the meantime, our friend decided to wait and to do a little quiet investigating. This didn't seem to suit Jones, for he got someone else to hook up with him in a business deal. Affairs went on swimmingly for this firm of Jones & Janes for some months, then the partners began to have trouble. The situation became tense and strained. At the end of two years, Janes found himself facing both a nervous and a financial breakdown, and after much difficulty and heavy loss, withdrew from his entanglement with Jones. He would have been better off if he had waited to eat a peck of salt with this man before he placed himself in his power.

It isn't that we are to be suspicious of others, but here as elsewhere, it is wise to "Know—not guess," for knowing is safety, and guessing is a gamble.

As the old Hebrew was wont to say to his offspring, "My son, enter thou into no hasty contracts." This is good advice. It is the advice which the lawyer gave our friend and which saved him much distress of mind, an unfortunate business association, and a heavy loss of money. A proposition or a person who will not stand looking up, had best be let alone.

---

## "OH DEATH, WHERE IS THY STING?"

A Chicago banker recently wrote to a friend in reply to a letter asking how he, the banker, was getting along. The letter was as follows:

"I have been held up, held down, sandbagged, walked on, battened out and squeezed. First by the United States government for federal war tax, the excess profit tax, liberty bonds, thrift stamps; for state, county and city taxes; the capital stock tax; merchants' license and auto tax, and every society and organization, whatever I may or may not possess.

"From the Society of St. John the Baptist, the Y. M. C. A., the Old Women's Relief, the Navy League, the Red Cross, the Black Cross, the Double Cross, the Isolation Home, the Dorcas Society, the Long Hair Relief, Belgian Hare Relief, etc., etc., ad infinitum. The government has so governed my business that I don't know who owns it.

"I am inspected, suspected, examined, and re-examined, informed, required, restrained and commanded, so that I don't know who I am, where I am or why I am here.

"All I know is that I am supposed to be an inexhaustible supply of money for human need, desire or hope of the human race, and because I will not sell all I have and go out and beg, borrow or steal money to give away I have been cussed, discussed, boycotted, talked to, talked about, lied to, lied about, held up, hung up, robbed and nearly drained; and the only reason I am clinging to life is to see what in hell is coming off next."

---

The Marine Hardware Company at San Pedro, California, reports a flourishing trade, particularly along marine paint lines. The company is having particular success with Otello paint, a new product that is said to take the place of oil paint at about half the cost.

## MAKES FRIENDS FOR KEYSTONE REAMERS

Geo. H. Wilkins, president of the Geo. H. Wilkins Company of Chicago, Illinois, took advantage of the recent Automobile Accessory Convention at Del Monte for a general tour of the West and Northwest in the interest of the Keystone Reamer and Tool Company, of Millersburg, Pennsylvania.

The Geo. H. Wilkins Sales Company handle the sales for Keystone reamers in the western half of the United States, and Mr. Wilkins officially represented the company at the Del Monte convention. At the important points on the Pacific Coast, Mr. Wilkins found a friend and guide at every office of the Sprake Sales Company, for it is through the Sprake Sales Company that the far western business on Keystone reamers is handled.

Mr. Wilkins is one of the most important authorities on reamers in the United States, and has been connected with some of the largest reamer manufacturers during his many years of study and experience.

Keystone reamers have become well and favorably known to tool buyers and mechanics in general in the West, especially since the sales have been handled by the Sprake Sales Company. However, the trade was especially glad to meet the representative of the company and we know that his experience in seeing western conditions first hand and familiarizing himself with the western field will be mutually helpful and beneficial to the Keystone Reamer and Tool Company, the Sprake Sales Company and the trade in general.

The Chicago office of the Keystone Reamer and Tool Company, where Mr. Wilkins makes his headquarters, is at 180 North Market Street.

## TWO LIVELY PAINT SPECIALTIES

In Absorene and its twin sister HRH, merchants have found two paint specialties that move fast, bring repeat orders and satisfied customers, especially among housewives, and show a generous turnover. Both of these cleaners are the product of the Absorene Mfg. Company at St. Louis.

Absorene has been so named because it absorbs dirt. It is especially designed to clean wall paper and window shades, and as stated in the company's announcement elsewhere in this issue, the dealer who handles this cleaner can show a 60% to 80% profit on the sales. The manufacturers cooperate with the dealers with national advertising, dealer helps, displays, and a product that attracts attention and especially appeals to the women customers. Absorene is conveniently packed in 14-ounce cans, and is packed three dozen cans in a fibre case. It may also be obtained in 20-ounce cans or 10-pound pails.

Those who handle Absorene of course ought to know more about HRH, its twin sister. HRH is especially a paint cleaner and is packed in cartons to retail at ten cents. Three dozen of these cartons come in each case.

The two products of the Absorene Mfg. Company are handled by jobbers almost universally, but the manufacturers will be glad to forward information direct upon application. Orders will, of course, be referred to territorial distributors where they exist.

## MEETING H. B. MATTHEWSON

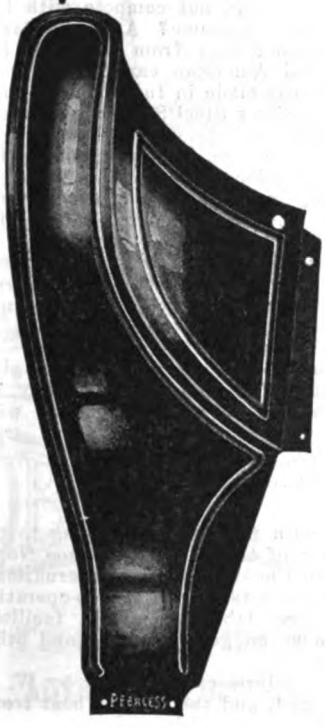
As the importance of the hardware trade in distributing automobile accessories in the West is more and more felt, accessory buyers for the various western institutions assume more and more prominence in the field, and their abilities and influence are universally recognized. Among such departmental heads who know the field and are leading figures before the trade is H. B. Matthewson, in charge of the accessory department of Dunham, Carrigan & Hayden Company.

Mr. Matthewson is no newcomer to the automobile accessory field. In fact he received his training with Chanslor & Lyon Company and this experience alone speaks for itself. Some months ago he took over the management of his present department and its steady increase in volume is testimony to his wise, alert guidance. Mr. Matthewson is a close student of the automobile accessory industry and he is closely in touch with new goods and the changing conditions of the market.

Thousands of western merchants who have learned that when they do business with such a house as Dunham, Carrigan & Hayden Company their wants will be earnestly and carefully taken care of. They may know that in the accessory field their interests will be thoughtfully guarded by Mr. Matthewson at the head of his department. He will be pleased to offer special advice and suggestions to any merchant who is just putting in an accessory department and his experience along this line will make his counsel invaluable.

## A TIP TO AUTO ACCESSORIES DEALERS

Do you know that the tar removers you sell to motorists with which to clean up their machines after a battle with newly tarred roads is also one of the best things obtainable for taking ordinary house paint off glass? Those who have cleaned the windows of a new house or a newly painted house will appreciate this.



If accessories dealers will advertise their line of tar removers for this purpose, they will soon find themselves serving customers who do not own an automobile and never expect to own one.

Listening often pays better than talking.

# PEERLESS FENDERS

## *For Ford Cars*

Peerless Fenders are built to fit all models of Ford Cars:

No. 16 fits cars up to and including 1916 model Fords—No. 17 fits 1917 and later models.

The Peerless Fender is constructed as an exact duplicate of the Ford Fender—they are stamped out of No. 20 heavy gauge full-finished steel, with full crown and reenforcing ridges. This not only adds to their beauty, but strengthens them to withstand severe road shocks and vibration—and will not permit them to sag. They have a lustrous black enamel finish—two coats baked on. Enamel baked on, withstands the weather much better than paint.

## Retail Price $30.00

**Per Set**

Dealers who have not shared in this wonderful replacement business, should investigate it. It means a better business and more profits. Ask your jobber or write for complete catalogue on PEERLESS PRODUCTS FOR FORD CARS. Address Department 14.

## TRY THESE ADVERTISEMENTS

Here are a few suggested local paper advertisements for the up-and-coming accessory department. If that includes you, they may suggest a thought or two. Try them:

### PREVENT TIRE TROUBLE

You can actually avoid a lot of your tire troubles.

The surest way of doing it is to use ——— tires and tubes.

Learn to depend on our service of tire inspection—it is a real service of prevention. It takes only a minute now and then, and it adds many miles to the life of a tire.

Don't forget the combination— ——— tires and our service. You'll get the highest mileage this way, and you'll know what real tire satisfaction means.

(Dealer's Name Here)
(Address and Telephone Number)

### SAVE MILES BY WATCHING TREAD-CUTS

You tie up a cut finger to keep out the dirt and avoid serious trouble. For the same reason you should attend to cuts in your tires.

But it is easier to overlook cut tires than cut fingers.

Our quick, expert tire inspections at regular intervals will find the cuts for you as well as other tire destroyers. This is part of our service, which is constantly winning more and stronger friends for us.

Another big feature of our service is the fact that we start you out right by selling you ——— tires and tubes.

(Dealer's Name Here)
(Address and Telephone Number)

### TIRE REPAIRING BY EXPERTS

Your worn or injured tire will receive skilled attention in our shop and its life will be lengthened.

We will cure it according to the most efficient conserving methods. All material that we put into your tires will be the best.

Bring in your worn casings. There may be mileage in them. If there is we will see that you get it.

We do not accept your tires unless they can be repaired successfully.

(Dealer's Name Here)
(Address and Telephone Number)

### FREE TIRE INSPECTION

Give longer life to your tires and tubes—this is part of our service to car owners.

Small tread cuts, fabric breaks, wheels out of line, brakes unequally adjusted—these things and many others shorten the life of tires.

Our service means among other things, regular inspection of your tires for the above destroyers of mileage.

(Dealer's Name Here)
(Address and Telephone Number)

### AIR IS CHEAPER THAN TIRES

Are you sure that you have enough air in your tires? An underinflated tire soon cracks at the shoulder.

We can tell you in a minute whether your inflation is right. And at the same time we can locate any other cause of premature tire wear. Remember—plenty of air prevents wear and tear.

You will save money by our quick, expert service of inspection and real tire advice—let's get acquainted right away. We're anxious to be of service—that's one reason why we sell ——— tires and tubes.

(Dealer's Name Here)
(Address and Telephone Number)

## ATKINS STEEL EXPERTS HELP AUTO RACERS

Who said America could not compete with Europe in making steel and treating same? At the Indianapolis Motor Speedway racing cars from all over Europe recently raced several American cars. Who won the race? An American car made in Indianapolis, Indiana, the same city where Silver Steel Saws are made.

The hardware trade will be especially interested to know that the E. C. Atkins laboratories contributed directly by putting various parts of the winning car through a tempering process such as was necessary to make them hold up under such a tremendous grind as the 500 mile race.

Who would have thought that a saw manufacturer would have had anything to do with Gaston Chevrolet, driving a Monroe car, winning the 500-mile International Sweepstake Race held at the Indianapolis Motor Speedway on May 31st?

The letter below from Louis Chevrolet gives a great deal of credit to E. C. Atkins & Company, manufacturers of Atkins Silver Steel Saws, for winning the race.

E. C. Atkins & Co., Inc.,
Indianapolis, U. S. A.

Gentlemen:

One of the main factors contributing to the wonderful victory of the winning Monroe No. 4, driven by Gaston Chevrolet in the International Sweepstakes 500-mile race, was the co-operation given through your laboratories and facilities for steel treatment on gears, springs and other parts of the car.

Your expert analysis of the steels by W. R. Chapin, metallurgist, and the various heat treatments enabled this car to withstand every test of the most gruelling speed contest of modern times, and in acknowledging this service I wish to give my opinion that your concern represents the world's leading specialists on steels and their treatment.

Thanking you, I remain,

Yours very truly,
LOUIS CHEVROLET.

## NEW OFFICERS OF SARGENT & CO.

At the annual meeting of the stockholders of Sargent & Company directors were elected as follows: H. B. Sargent, E. R. Sargent, J. D. Sargent, G. L. Sargent, John Sargent, Ziegler Sargent, Bruce Fenn, Wilfred Lewis, G. F. Wiepert.

At the meeting of the directors, following the stockholders' meeting, the following were elected as officers of the company: H. B. Sargent, president; G. L. Sargent, vice president; Bruce Fenn, vice president; Ziegler Sargent, treasurer; Murray Sargent, secretary; James J. Markham, auditor.

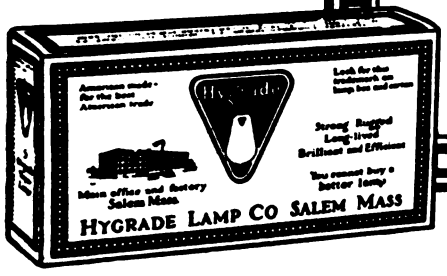
The queer object in the illustration is a rush light holder, a lighting device even more primitive than the candle. It shows to what expedients our forefathers had to resort to get light.

What a wonderful improvement over its feeble flame is the brilliant light from splendid Hygrade lamps, always ready for service every hour of the day or night.

Then *and* Now

When you come East you will see in the unequalled historical collection in the Essex Institute in Salem this ancient substitute for the candle and hundreds of other equally interesting objects.



And in the Hygrade factory, a short distance from the Institute, the latest developments in modern lighting.

You will appreciate the contrast between this ingenious but scarcely efficient method of lighting and the modern science, industry and skill which enables us to turn out every day 25,000 "persistently well made" Hygrade lamps.

We will welcome you to Salem and assure you that the time spent in our factory will mark one of the most interesting days of your vacation.

## FIVE BROTHERS BUILD AN INDUSTRY

No better illustration of the value of working together has come to our notice than in the organization and development of Van Cleef Brothers, manufacturers of automobile chemicals and rubber cements with their main factory at Chicago, Illinois. This history of Van Cleef Brothers proves the value of cooperation and disproves the old theory that too many cooks spoil the broth and too many relatives injure an enterprise.

Probably some divine guidance watched over the destines of the Van Cleef Brothers. When we come to the good names, Noah and Paul, the principal moving spirits, we do not wonder that the company has seen the light and weathered the storms that always menace a growing industry, for Noah could float any enterprise and Paul's steps would never waver from the true path.

### Of Sturdy Belgian Stock

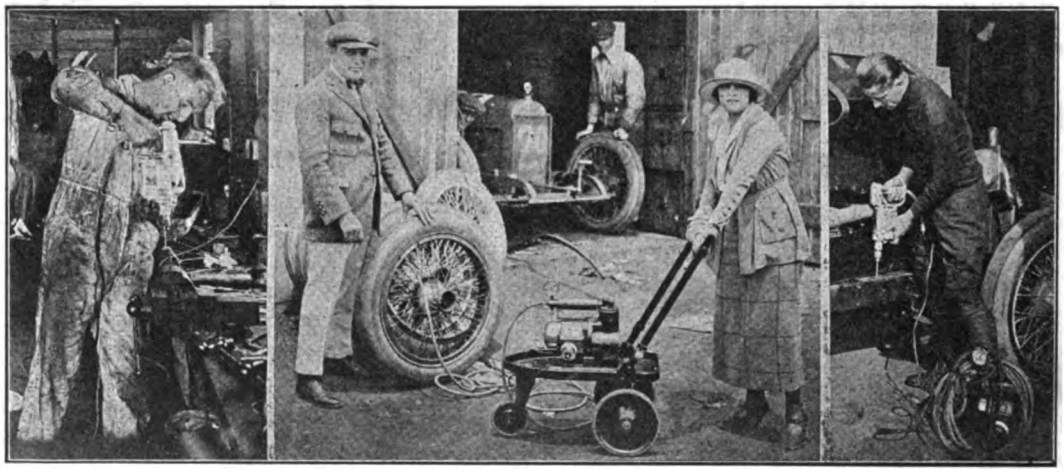
Van Cleef Brothers were without capital when they began. The father was a native of Belgium and the boys' main endowment was their hardy, thrifty blood and stock. Brother Eugene was a teacher in one of the universities. Brothers Maxime and Felix were linen salesmen. Brother Paul was a chemist and a good one.

Through no fault of his, but as an accident of circumstances, Paul lost his position. This change in his fortunes gave him the chance he wanted to work on a rubber cement that had been an idle fancy of his for some time. So he proposed to his brothers Maxime and Felix that they all combine in a modest way to put this cement on the market.

The enterprise was started on $500.00 capital. Maxime and Felix continued selling linen to support Paul during the chemical research. The result proved more and more valuable and the business grew of its own weight. There never was need of any more capital than that $500.00 at the start. After the business grew and the opportunity for them became more and more apparent, one by one the Van Cleef Brothers left their former work and entered the organization.

At the present time Noah Van Cleef is the Executive Manager of the concern. It is Noah Van Cleef who represented the organization at the recent Automotive Convention at Del Monte. It is he who is in charge. Maxime and Felix handle the sales department, of course, and Paul Van Cleef is the chemical and technical chief and is in charge of production. Another brother, Eugene, is assistant to Brother Noah.

The business is at the present time eleven years old and has grown phenomenally. During the last few months an additional story has been added to the factory building and this fall a very much larger building will be constructed to house the activities.



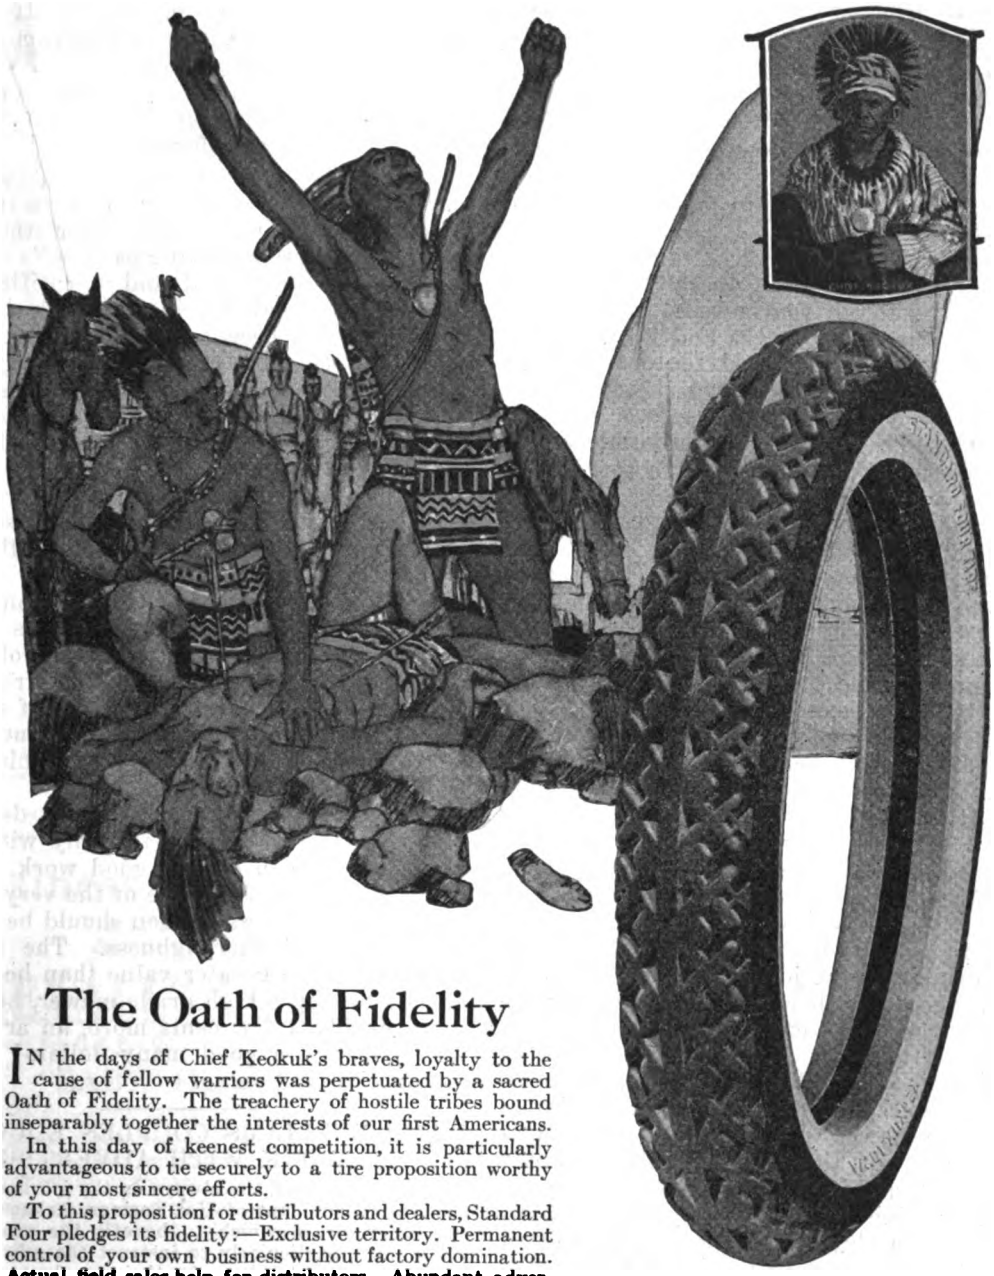
The Van Cleef line has become nationally famous in several trades. It goes to the automobile industry, the bicycle industry, the shoe finding men and the millinery trade. The line includes all manner of rubber cements and compounds, automobile chemicals for valve grinding, radiator repair liquids, paints, enamels, lubricants, tape—a complete assortment and one that is known and accepted as standard in the trade.

---

The Valley Hardware Company at Grants Pass, Oregon, with W. D. Fry as sole proprietor, succeeds the Jewell Hardware Company, which formerly did business at Grants Pass.

Anderson, Bolick & Kavanaugh is a new hardware and implement firm at Lewiston, Idaho. The company has purchased a site and is erecting its own new building.

---



BLACK & DECKER SPECIAL MACHINES ON THE FIRING LINE

The recent automobile races at Uniontown, Pennsylvania, well illustrated the uses Black & Decker drills, valve grinders and air compressors may be put to in connection with the automobile business. Here are three views which show Black & Decker tools in actual use in connection with these races. At the left, the mechanician for Eddy O'Donnell, driving a Duesenberg car in the race, is shown drilling a support for the radiator screen with a Black & Decker ¼-in. drill. On the bench can be seen a Black & Decker Electric Valve Grinder.

In the center is Neil Whalen, starter of the race, with his wife, shown inflating a tire with a Black & Decker air compressor. On the right the Meteor is receiving finishing touches before the race with a B & D drill. All the crews of these racing cars carry Black & Decker tools with them in a special box and would not be without them.

## ANALYZING LAWN MOWERS

The following instructive article is reprinted by permission from one of the Educational Bulletins of the Honeyman Hardware Company. It is the wise and progressive custom of the Company to publish from time to time these interesting bulletins to aid their employees in knowing and therefore selling their goods. We believe that the entire trade will be interested and benefited.

There are many different makes, sizes and styles of lawn mowers, each manufacturer claiming some advantage in point of construction and quality.

As to size and style they range from the small hand mower with 10 in. cut to the horse drawn and motor driven mowers, intended for golf links, cemeteries, parks and large estates. Some are specially designed for cutting high grass, others to shave the lawn closely.

The construction of a lawn mower is an interesting study. Anybody can build one in any kind of a shop with scarcely a tool, but to build it right, requires machinery of special design and as accurate as it is possible for mechanical skill to devise.

There are some hundreds of operations necessary in the construction of a good mower, yet every year, there are thousands of mowers sold, whose parts are assembled just as received from foundries and mills with scarcely an operation to insure exactness of fittings. Such mowers cannot possibly do good work, but will leave instead, an uneven lawn, and in addition, will quickly go to pieces the moment an adjustment is attempted.

### Frame

A good lawn mower must have a strong frame if it is to withstand the hard wear and abuse to which it is subjected.

The frames of some mowers are not made on correct principles, the joints are not fitted, they are held together by bolts inserted through slots in the castings and often the castings are hollow and filled with putty or cement. A frame of this kind cannot possibly remain in alignment. After a little use, it will twist out of the original position, the mower will get out of adjustment and refuse to cut, the operator will attempt a readjustment, and if a mechanic, he may finally get it in working condition—only to find, however, that in a short while it is again out of alignment, and cannot be put in first-class condition because of the weakness in its construction.

The frame should be machined together, every part fitted to the other in exact precision. The side plates, the cross rod, the cutter bar, should all dove-tail into each other so accurately and firmly that the screws and bolts may be removed and yet the frame remain together. A frame constructed in this manner will always remain in perfect alignment under all conditions.

A lawn mower is subject to severe strain and shocks during its life. For instance, a rock, a piece of wood or a bone may be picked up on a lawn, while running at high speed. The mechanism comes to an abrupt stop and the mower suffers a great shock, materially affecting the frame and twisting it out of alignment or adjustment, unless it be solidly built. A lawn mower, therefore, must have good material and be of good construction.

### Adjustment

The parts subject to wear, of course, are the parts that revolve. Provision, therefore, must be made for taking up the wear in the axles or journals of these revolving parts.

The most approved and scientific bearing known, is the ball-bearing, not only because it runs easy, but because it reduces friction to a minimum, thereby preventing wear and consequently prolonging the life of the mower. There are many devices for adjusting ball-bearings, some of them simple and others very complicated.

A perfectly adjusted lawn mower means a self-sharpening lawn mower. The self-sharpening is obtained through friction of the blades. That is, the edges of the upper or revolving blades wear away as they come in contact with the lower blade. Should looseness or wear occur in the ball-bearings of the revolving cylinder, then the pressure of the grass, when cutting, would separate the edges of these two blades and not allow them to come into contact or friction, therefore, the self-sharpening results would not be obtained.

A well kept lawn necessarily demands a high grade lawn mower, for only with a high grade mower can one do good work. All material, therefore, should be of the very best and every detail of construction should be designed with care and thoroughness. The consumer usually gets no greater value than he pays for and by buying a high grade mower, he obtains, for probably a few cents more, an article that will give him a good many dollars' worth of satisfaction and value.

---

## HAMP WILLIAMS COUPLES EDUCATIONAL WORK WITH ADVERTISING

Hamp Williams, the always on the job hardware and implement merchant of Hot Springs, Arkansas, is ever seeking ways in which to benefit the people of his community, particularly to instruct the school children and assist the teachers in their work, recently presented to each of the rural school districts adjacent to Hot Springs, some 40 or more, a six-page map of the world.

Across the top it reads: "Presented to the ——— District by the Hamp Williams Hardware Co., Hot Springs, Arkansas."

This map is prepared by the Geographical Publishing Co. of Chicago, and is what is known Spherical Projection of the World. A number of interesting features have been incorporated in the map. The time of the world is shown in different longitudes, reference is made to recent Arctic and Anarctic expeditions and discoveries, a new survey map of the State is shown, the latest geographical boundries of various European countries are outlined, and much valuable information is given.

## ACCESSORY MANUFACTURERS' AGENTS ORGANIZE

An important milestone on the road to progress of the accessory industry of the West has been passed in the organization of an association among the manufacturers' representatives. As one of the members recently put it, "all the kinks involved in organization and start of such an association have been straightened out." Some of the largest factors in the distribution of automotive equipment in the West are members, and everything points to the solid and permanent success of the organization.

The constitution of the Association states: "The objects of the Association are to promote the welfare of its members and to distribute amongst them the fullest information obtainable in regard to all matters affecting the automotive accessories business; to better business conditions; to promote good-will amongst the members thereof by the interchange of business ideas and by the development of a friendly relationship so far as business matters are concerned; to aid in bringing about a better business relation between the members of the Association and the jobbers and retailers with whom they do business; to assist in standardizing and marketing high grade automotive accessories; to improve the quality of automotive accessory goods marketed by American manufacturers and the service rendered by the various branches of the automotive industry; to stimulate sales of automotive equipment; to correct and remedy any condition now existing or that may later arise which has a tendency to cause ill feelings, dissatisfaction, or as a result thereof, curtailment of business; to standardize sales policies in a manner which will be of mutual benefit, and by the standardization of sales policies is meant that the sales policies shall be so shaped as to conform to the highest standard of business and trade ethics as defined from time to time by the members of the Association; to promote harmonious working arrangements between factories and jobbers to the end that automotive accessories may be marketed through the regular recognized channels of trade.

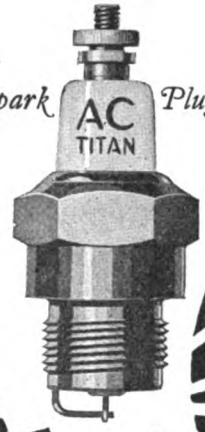
The Association has been started with twelve charter members, representing important factors in the automotive equipment industry. The territory embraced by the Association in the twelve western states. Steps have already been taken to organize similar Associations among sales representatives and agents in some of the eastern cities, notably Chicago, Cleveland and Chattanooga.

It is not the intention of the Association to remain a closed corporation by any manner of means, and any applicant who conforms to the objects of the Association as stated in the constitution may make application to the secretary, with the necessary initiation fee, and will be considered for membership. Direct factory representatives of manufacturers are eligible for membership, as well as sales agents and sales companies.

### Officers Typify Standard

Five members elected by the Association compose a Board of Governors, and it is this body that carries on the formal business of the Association. Informally, however, and socially, one of the most important accomplishments is the weekly luncheon of the Association in San Francisco. It is already keenly anticipated by all members, and is having its influence in promoting the interests of the accessory business.

In its officers, the Association well illustrates the caliber of its membership. As president, W. S. Greenfield, former manager of the Johns-Manville San Francisco branch and now manager of Allied Industries, Inc., is one of the ablest and most popular men in the western accessory field. The vice-president is Arthur E. Mohrig, best known to the trade as western representative of such manufacturers as the Elite Mfg. Company, Ashland, Ohio; K-D Lamp Company, Cincinnati, Ohio; Kales Stamping Company, Detroit, Michigan, and the Luthy Hydrometer Company of Detroit, Michigan.



Secretary J. H. Collins is the western manager for Sanford Bros., national manufacturers' agents, with offices at Chattanooga, Tenn; Cleveland, Ohio, and Chicago. Mr. Collins knows the hardware and automobile accessory business thoroughly, representing 22 important accounts, and he is thoroughly representative of the highest standards of manufacture and distribution.

These three officers, with Paul Gardiner of the Bailey Drake Company and C. W. Ellsworth of the Sprake Sales Company, form the board of governors of the Association.

The charter members of the Association are as follows: Allied Industries, Inc., Bailey-Drake Co., Badger Sales Co., Norman Cowan Co., Graf Sales Co., Gilbert Sales Co., Thos. M. Gardiner, C. W. & F. W. Jonas, Arthur E. Mohrig, Sprake Sales Co., Sanford Bros., V. S. Walsh.

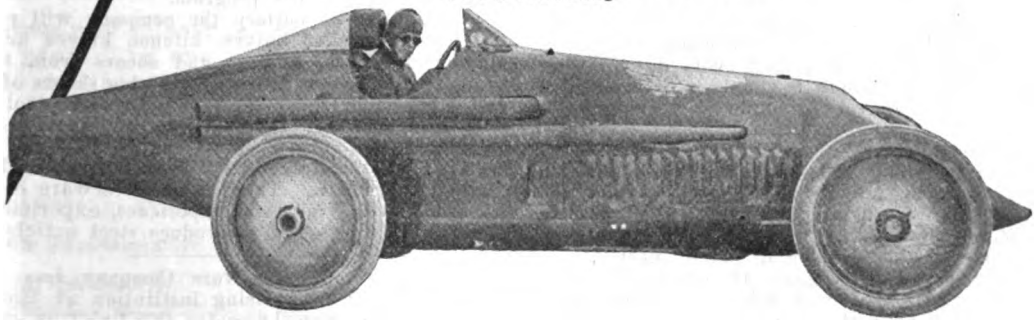
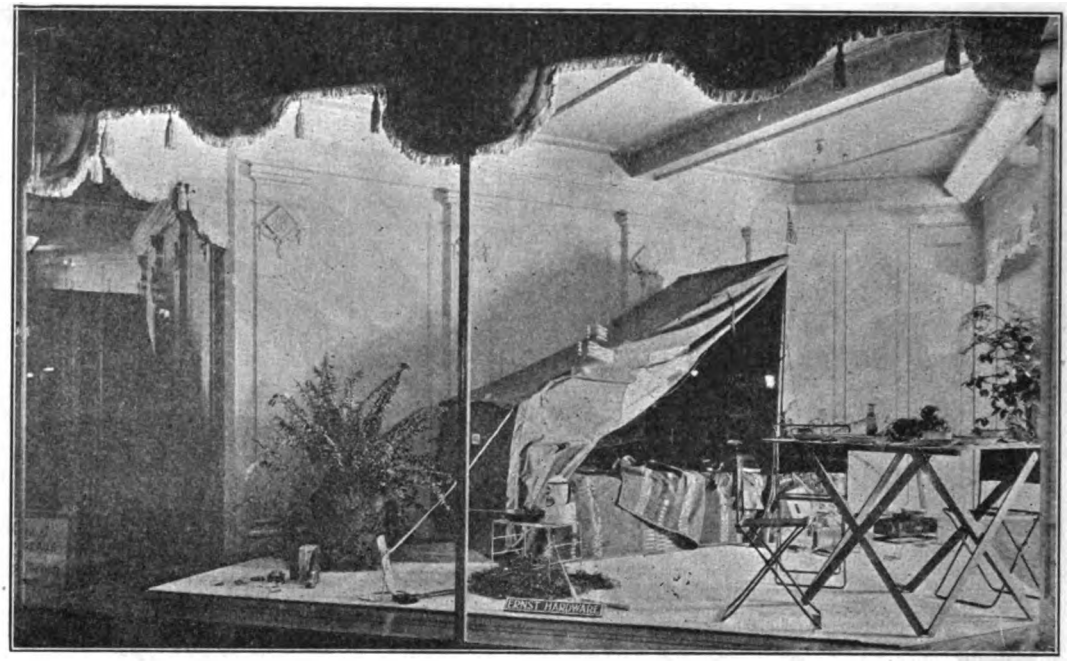
*The Standard Spark Plug of the World*



AC



When Tommy Milton sped to seven new world's records on Daytona Beach, driving in one trial five miles in two minutes, sixteen AC Spark Plugs fired the twin engines of his Duesenberg. **His faith in them was more than justified by their unfailing reliability and absolute precision. In the mile trial, driven at the rate of 156.04 miles an hour, the sixteen plugs delivered a total of 9,870 sparks in 23.07 seconds without a miss. Every second, 428 jets of flame converted gasoline into smashing power.** What eloquent proof of AC superiority! Can you honestly tell your customers that you have a plug of any other make that's "just as good"?

Champion Ignition Company, FLINT, *Michigan*

BRING THE CAMP TO THE CITY AND ATTRACT THE PASSER-BY

Here is another one of the remarkable show windows of the Ernst Hardware Company at Seattle, Washington, thoroughly indicating how D. W. Stapp, display manager, believes in placing the goods in such a way that their use will be suggested and giving a setting that will bring out the full value of the goods displayed.

The ideas of Display Manager Stapp were taken into consideration when the new show windows were built. The windows are down low so that the display is on a level with those passing by and so that from the store they open out as an anteroom. It is possible to take a customer right into the window to explain or demonstrate any goods displayed.

It will also be noticed that there is no artificial background to these windows. The wall in the rear is perfectly plain, giving a harmonious effect and concentrating the attention on the display itself.

## THE NEW WINCHESTER LINES

An analysis of many of the new Winchester products, breaking them down into their simple components, will show that a large proportion involve the same or similar manufacturing processes as component parts in guns. Only they are simpler than the corresponding gun process.

Take the manufacture of flashlights as an example. A seamless, drawn zinc cup is the basis of the Winchester Flashlight cell and an important secret of its great length of life. The drawing of these shells involves nothing new to Winchester. It has been drawing cartridge shells involving the same mechanical processes for decades.

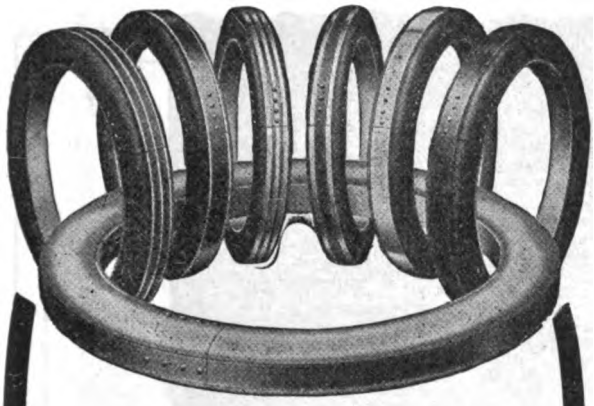
Then in the manufacture of knives. The key to a good knife is its blade. Its success or failure depend upon the blade. What is the first process this requires? Forging. The Winchester has been forging thin parts for half a century. Then comes the grinding. Here again is a process used every day in Winchester manufacture. There is simply a difference in the shape but not in the principle or technique involved.

Then a good blade must be hardened. Here is another process in which Winchester is expert through every day practice, going back almost beyond the memory of man. Hardening of steel had no terrors for the Winchester staff after the conquest of the British bayonet problem which it had to meet during the war, not to mention some thousands of other hardening problems met and solved in past years. And as to the polishing, that is another familiar operation with which the organization has been on the closest terms since it turned out its first gun back in the sixties.

An analysis of the knife shows that there is not a single basic operation with which the organization is not only familiar but in which it is highly expert. The matter of assembling is comparatively simple compared with the intricate work of assembling even the simplest type of guns. It is only necessary to change some of the details of equipment and rearrange the sequence of operations to produce a knife of the quality for which Winchester guns have been famous.

### Selection of the Lines

In the course of the selection of the specific items which were to be manufactured sporting goods of other lines than guns and ammunition were decided upon. Fishing tackle and skates were added to the Winchester lines. Tools of personal use, flashlights, distinctly a personal service article and cutlery were made part of the new program.



In the line of cutlery the company will place on the market pocket knives, kitchen knives and tools of various kinds, scissors and shears from the embroidery and pocket scissors to the big shears of tailors and paper-hangers, carving sets and various tool knives. All, however, follow the principles of selection already outlined.

All these lines of cutlery, it will be noticed, represent steel products. There is no silverware or plated-ware included. Winchester experience, experiments and practice have fitted it to produce steel articles.

## A GLIMPSE OF GOODYEAR'S NEW WESTERN PLANT

One of the busiest places in the west right now is Ascot Park at Los Angeles, California, where the big plant of the Goodyear Tire & Rubber Company is in the course of construction. As the gigantic shovels, derricks and other excavating machinery appear on the ground and ton after ton of concrete is poured into the massive building foundations, hundreds of men are getting ready to fit the big steel beams together.

The unprecedented expansion of Goodyear's world wide trade caused the officials of the company early in 1919 to investigate possible sites for the establishment of a big Goodyear plant in the west, to supply the demand for the company's products in the west and the foreign countries across the Pacific.

Ground for this great western enterprise was broken in July, 1919, by President F. A. Sieberling, of the Goodyear company, and immediately afterward the engineers and construction men set about to complete the building of the plant and turn it over ready for operation by June 1, 1920.

The building scheme embraces the construction of three units—a tire manufacturing plant, a cotton fabric mill and a warehouse. Around these three main buildings will be grouped the various service buildings, such as the power house, machine shop, cement house, administration building, etc. In locating these various buildings due allowance has been made for the future growth of the company, so that any additions may be made as required.

An idea of the magnitude of the building operations can be gained from the extensive outlay of construction materials required. Among the important materials which 1,800 men are fashioning together into a mammoth industrial enterprise, are 6,000 tons of structural steel, 15,000 gallons of paint, 33,000 tons of sand, 60,000 barrels of cement, 600,000 tons of crushed rock, 4,000,000 feet of lumber and 10,000,000 brick.

The tire manufacturing plant construction is of steel and concrete. The building is three stories high, 580 feet long and 300 feet wide. The cotton mill which will be operated by the Goodyear Textile Mills Company, is three stories high, of reinforced concrete, 580 feet long and 134 feet wide. The warehouse is a three-story reinforced concrete building with mezzanine floor.

The power plant, housed in a reinforced concrete building, embraces three 600 horsepower boilers of the oil burning type. A crude oil storage tank containing 70,000 cubic feet of space is being built to take care of the fuel wants of the power plant. This tank is connected by direct pipe line with the source of fuel oil supply. It is expected that the boilers can be operated at 200 per cent of their regular rating with the use of fuel oil. A massive smokestack is being erected of concrete.

### Water Supply Important

One of the most important considerations in the establishment of a big manufacturing concern in any locality is the assurance of an ample water supply. And in the case of the Goodyear, this is doubly important, for in rubber manufacture a great deal of water is used, notably in the washing machines. Four wells are being constructed to a depth of 200 feet, each of which will have a pumping capacity of 1,200 gallons per minute. Two other wells driven on the tract some time ago for irrigation purposes, have also been acquired by the company and their output will bring the combined capacity of the six wells up to 7,200 gallons per minute. The pipe casing in these wells runs from 14 to 18 inches in diameter. Electric power will be used in pumping.

The operation of the two manufacturing units, the tire plant and the cotton mill, will involve the employment of about 9,000 workmen. The daily tire output will approximate 7,500, and the cotton mill will turn out weekly 75,000 pounds of cord fabric and 75,000 pounds of woven fabric.

### Nearby Cotton To Be Used

The raw cotton from which this fabric is to be manufactured will come from the Goodyear plantations in the Salt River Valley in Arizona, and from the Imperial Valley of southern California where the company has made arrangements with cotton growers for the cultivation of about 10,000 acres of long staple cotton in 1920.

Tires are commonly thought of in terms of rubber. Yet cotton is one of the chief materials entering into tire construction. The carcass, or "body" of the tire, is built up by the tire maker of a number of "frictioned" cotton fabric. It is the cotton which resists the air pressure in the tube, with the rubber acting as a buffer between the cotton carcass and the road or street surface.

A 28,000 acre tract in the Salt River Valley was acquired, agricultural experts having demonstrated conclusively that the highest grade of Egyptian cotton could be successfully grown there. A large portion of this tract is now producing cotton of a fine silky texture and great tensile strength, ideal for tire manufacture.

Upon the completion of the Goodyear Textile Mills in Los Angeles, the cotton from these plantations will be sent these mills to be converted into tire fabric. The product of about 10,000 acres in the Imperial Valley in southern California, which will be grown this year expressly for Goodyear, will also come to Los Angeles for conversion into fabric.

## CALIFORNIA COMES BACK

In our last issue one of our subscribers, feeling in rather a joking mood, ventured to refer to the cosmopolitan character of California as to products which they do and do not produce.

So our readers may thoroughly understand the matter, we are reproducing the item referred to. We were confident this would not pass unnoticed by some of our California subscribers, and as typical of the replies received we are publishing the "comeback" of Harry N. Sweet of San Pedro, California. Thus far an unbiased jury would probably say that the honors are even.

### Missouri's Comment

A Missouri subscriber contributed this:

The Californian gets up at the alarm of a Connecticut clock; buttons his Chicago suspenders to Detroit overalls; washes his face with Cincinnati soap in a Pennsylvania basin; wipes on a Rhode Island towel; sits up to a Grand Rapids table; eats Kansas City meat and Minneapolis flour with Idaho potatoes cooked with Nebraska lard on a St. Louis stove, burning Wyoming coal; puts a New York bridle on a Colorado broncho, fed with Iowa corn; plows ten acres of land (covered with Ohio mortgages) with an eastern plow. When bedtime comes he reads a prayer written in Jerusalem; crawls under a blanket made in New Jersey, only to be kept awake by fleas—the product of his own state.

### A Native Son's Answer

Editor HARDWARE WORLD:

I have for the past year or so read your delightful magazine and, like all others who are in the game, find much that is helpful in your pages. However, I wish to take exception to our Missouri friend who, in the seclusion of the distant Ozarks, writes so sarcastically of California, my Golden State.

The Californian does not arise to the clanging of any eastern alarm clock, he knows from experience that they are very unreliable. Instead, he is awakened by the soft chirp of the California song birds. He does not wear any suspenders or other antiquated devices but dresses in a light suit of California long staple cotton cloth; washes his face in clear unfrozen water flowing free of charge from a California hot spring; sits up to a rustic table made from native California palm-wood; eats the largest and sweetest oranges in the world, followed by a dainty California tuna salad, and if he wishes he may have a bit of California venison served in a platter of native California silver; puts a couple of quarts of California oil and some California gasoline in a California built motor boat and takes his Missouri friends to Catalina Island, which is also in California.

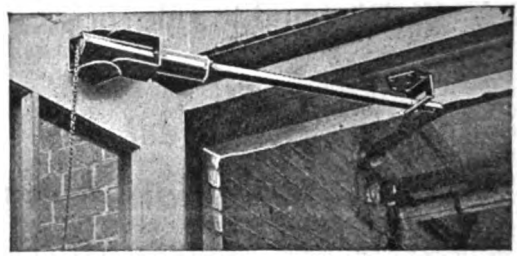
In the afternoon he opens his Missouri mail and takes out a few one dollar bills, made in the California mint, that was due on a Missouri farm loan. Then, in another letter, he incloses a California money order and urges his Missouri relatives to take the California Limited west and save the last remaining members of his family from extinction in a Missouri cyclone.

I might add that this letter was written in California by a Californian on an eastern typewriter which must have come from Missouri 'cause the darn thing "ain't no good."

Yours for California,

San Pedro, Cal. HARRY N. SWEET.

## A CORRECTION



In our June issue mentioning the new plans of the Napier Saw Works, Inc., an incorrect statement was made. We wish to correct any erroneous impression that was given.

The hack saw business of the Napier Saw Works will continue to be conducted by that company, with headquarters at Springfield, Mass., as in the past, instead of New York, as was stated.

The Victor Saw Works will continue as formerly to manufacture their well known product.

As stated in our July issue, the Metal Saw & Machine Company, Springfield, Mass, will manufacture the Napier metal cutting machine and band saws formerly manufactured by the Napier Saw Works, Inc. The latter company will now devote their entire energy to the manufacture of quality and expert hack saws.

If you can't be busy, don't be a busybody.

## NEW STANLEY GARAGE DOOR HOLDER

The Stanley Works of New Britain, Conn., has recently put on the market a new Garage Door Holder, called No. 1773 Cushion Type, and illustrated herewith.

This holder is very similar to the No. 1774 Garage Door Holder that has been so popular among the motorists, except that the 1773 is considerably heavier and is best used on extra heavy private garage doors or public garage doors.

The principle of this new holder is that there are very heavy springs covered by a cylinder, protecting them from the weather, which act as a cushion—relieving any strain on the hinges when the door is opened.

This new type of holder is applied and operates the same as the No. 1774, that is, by a slight pull on the chain. It also is reversible for right and left hand doors.

## HOW DOES YOUR SALES FORCE TREAT THE CHRONIC KICKER?

The man who is hard to please has to buy goods somewhere. He may be a crank, and a grouch, but his money is as good at the bank as that of the good-natured customer. And the store that can land his trade will probably keep it for a life-time—just because his bad manners cause him to get such a hostile reception elsewhere.

Bearing these facts in mind, the superintendent of a large hardware store decided to make a strong play for the "crank customer," and called his sales force together.

"Anybody can hold the trade of a good-natured customer," he told them. "It is the clerk who can please the cranks and chronic kickers who will get promotion here. The money of these customers is more difficult to get, but is is worth getting. Remember, you have to spend a certain amount of time on a crank customer anyway. If he goes away unsold, that time is lost absolutely. It is better to spend a minute or two more and make a sale than to dispose of a disagreeable individual quickly and have nothing on your sales-book to show for it.

**Criticisms Not Intended Personally**

"All you've got to do is to remember that you are working for the store and that cranky customer's criticisms and ill-humor are, after all, directed at us and not at you personally. If you will keep that in mind, there is no reason why you should go up in the air and lose your patience.

"From now on we are going to keep an eye on the clerk who waits on customers with a smile. We are going to hold a 'smile contest.' The salesclerk who is seen to smile oftenest during the week will have his picture published in our weekly house organ and will receive a cash prize.

"We are going to hold another contest, too, in which all of you may compete. Each week we shall print in our house organ a page describing the experiences of salesclerks with crank customers. Twenty-five dollars will be paid to the salesman turning in the best letter showing how, by courtesy and tact, he converted a disgruntled customer into a satisfied patron of the store. All other letters worth printing will be paid for. They must all be true experiences."

This plan worked out so well that the employes of this store are now looked upon by the public as being the most courteous and obliging lot of workers in the city. At the top of all its newspaper advertising the store ran the display line:

"The store where you are served with a smile."

Moreover, each clerk has built up a personal trade of crochety customers, who always ask for him by name when they come in to buy. They are apparently convinced that that particular salesman is the only person in the entire world who really understands them.

In hiring new employes, the superintendent of this store always looks for the smile first. If the applicant has a woe-begone expression or grouchy face he is not hired, no matter how experienced or competent he may otherwise be. The salesclerk who can't smile himself is hardly the kind to make grouchy customers smile.

## BUMPER CROPS IN MONTANA

Following is an extract from a recent letter from Sales Manager M. M. Geboski of the A. M. Holter Hdwe. Co., at Helena, Montana:

"The outlook at the present time is most encouraging. Business conditions this year will depend largely on crops, and at this time we see no reason to doubt that Montana is going to wallow in crop prosperity this year at least. While a normal crop has not been seeded, it is expected that the returns will be much higher per acre this year than in many years, owing to the abundance of moisture the past sixty days.

"In spite of the late spring season and the uncertainty in obtaining certain lines of goods, our business has been exceptionally good."

## PRESCOTT RINGS NEW CONNECTION

Prescott Piston Rings will henceforth be represented in the West by Norman Cowan. This new appointment is a result of the visit to the West of G. H. Prescott, president of the Prescott Auto Parts Company of Webster, Massachusetts. Mr. Prescott attended the Del Monte convention and made it his business to become thoroughly acquainted with Western trade conditions. As a result, he has selected Norman Cowan to represent the company before the Western buyers and handle the Prescott Piston Rings. Up to the present time Western sales have been handled by direct representatives of the company.

## MANUFACTURE ACCESSORY SPECIALTIES

The MacKenzie-Waterhouse Company, Bellingham, Washington, is one of the progressive institutions of the Northwest in the accessory manufacturing business. The company makes McMillan auto beds and Simplex auto rims. They also hold manufacturers' rights for Silverine solder which they distribute. All of these products are original and native to Washington. In fact the company has grown so fast that it has found it necessary to remodel its building at 1115 Railroad avenue.

## NEW DISTRIBUTORS FOR "NEVERFAIL" CARBURETORS

The Neverfail Carburetor Co., Long Island City, N. Y., announce the recent appointment of the following jobbers to distribute their new model "Neverfail" carburetor for Ford cars:

F. Hersh Hardware Co., Eastern Penna.; J. C. English Rubber Co., N. J.; Select Product Sales Corporation, Long Island and Brooklyn; Monarch Sales Co., Indianapolis; Bailey & Co., North Carolina to Texas; Deckert Brothers, Western N. Y. and Penna.; E. A. Patterson & Co., Kansas; The Mountain Tire & Gas Co., Colorado.

Frank M. Eldredge Co., of 403 Stevens building, Detroit, Michigan, are sales representatives for the United States.

## MEASURES THE WEIGHT OF TRUCKS

Merchants in the larger communities who are interested in introducing special machinery lines will be especially interested in the new Black & Decker road type loadometer. The illustration herewith tells its own story and only suggests the possibilities in the machine. County commissioners for highways should be especially good prospects for selling loadometers, for checking up the maximum load of trucks over highways, bridges and other restricted public routes. The problem of restriction of loads that can be hauled over public highways so that the upkeep of highways may be practical is a very real one in every community in the country.

The new Black & Decker loadometer has been devised for this particular purpose. With it the rear wheels of the truck are jacked up and the maximum load per inch of tire width is easily determined.

---

The "Paint Up and Clean Up" campaign had its effect in North Bend, Oregon, on the Hazer Hardware Company, when the firm painted its new building as an example to the community. It is reported that the example was heartily followed and profitably to these enterprising merchants of paint as well as hardware.

## MONTANA MERCHANTS BUSY

The Montana Hardware Co., Butte, Montana, advise that crop conditions are in excellent shape and unless something unforeseen happens in the way of shortage of labor, droughts, etc., they will have an excellent harvest.

Their sale of paints and auto accessories has been exceptionally good, especially the accessory line which has increased far beyond their expectations. They are anticipating a good business in Montana for the balance of the year.

---

## PRESIDENT RABE OF O. K. GIANT BATTERY CORPORATION PAYS $400,000 CASH FOR EQUIPMENT TO INSURE DELIVERY

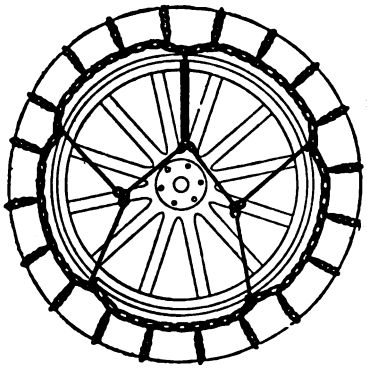
In these days of industrial expansion many changes are taking place in the manner of doing business. "To get machinery nowadays," says Paul Rabe, president of the O. K. Giant Battery Corporation, Gary, Ind., "is harder work than to get the money to pay for it. To be certain of getting equipment for our new buildings as rapidly as they are completed, I conceived the idea of establishing priority for deliveries by paying cash. We have in the course of construction special and standard machinery for the production of the O. K. Giant Batteries representing a cash outlay of nearly a half million.

"To convey an idea of the scale on which our operations are going forward, in unit No. 2 we have installed $72,000.00 worth of electrical charging boards of the most modern type. These boards have a charging capacity of 200,000 dry rechargable batteries of all types per day."

---

The Valley Implement & Hardware Company has been established at Grandview, Washington, under the management of W. D. Gray.

---



L. E. Barr has entered the automobile accessory business at Yuma, Arizona. Mr. Barr has been known to the high mountain trade as a member of the Yuma Auto and Tractor Company.

---

The Odessa Hardware Company at Odessa, Washington, has found it necessary to build a new garage to handle the automotive department of its business. Under the management of F. J. Guth, senior partner, the company has gone extensively into automobile and truck distributions. This department of the business has become such a healthy infant that a new cradle had to be provided. The Odessa company began in the hardware business 15 years ago.

## EXCEPTIONAL PAINTINGS FEATURE TIRE CAMPAIGN

Twenty-six original paintings, portraying Indian lore and legend in many of its most interesting phases, form the basis of the current advertising campaign of The Standard Four Tire Co., of Keokuk, Iowa. Expert critics have referred to the campaign as an excellent demonstration of the effectiveness of high class commercial art as applied to tire publicity.

The series of twenty-six paintings is said to represent months of research work by some of the leading commercial artists of the country, and the scenes cover a wide variety of subjects. These include: The Indian Runner; The Medicine Man; The Indian Oath of Fidelity; Archery; The Marriage Ceremony; The Great Spirit; The War Dance; The White Captive; Arrow Making; etc.

So many requests have been received for originals and copies of the original paintings that J. B. Cabeline, President of the Company, has authorized the following statement concerning the company's reason for such an extensive art program.

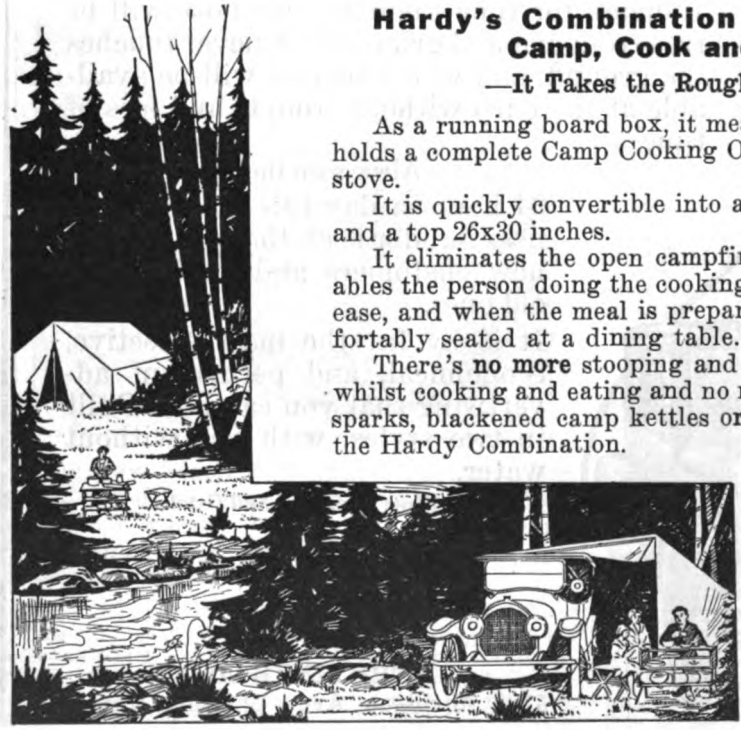
"Standard Four Tires are manufactured in the same locality where once lived one of the most unique characters among Indian chieftains. His name was Keokuk and Chief Keokuk was noted not so much for his warrior qualities as for his fidelity to a promise. Among all of those with whom he had dealings, the word of Chief Keokuk was indeed as good as a bond. He never broke a promise.

"Thus, it occurred to officials of The Standard Four Tire Co. that the spirit and character of the old and respected chief might well represent the policy and aims of the country. Hence, the adoption of a slogan that reads: 'Chief of the Tire Tribe.'

"The facts are largely responsible for the portrayal of Indian scenes in connection with our advertising appeal. It so happens, however, that no subject has been more misrepresented pictorally than that pertaining to Indian life and customs.

"Therefore, we resolved at the outset that no expense should be spared in obtaining the right kind of art. Our agreements with the artists stipulated that the finished work must be accurate in all respects. As a result, the series cost us several thousands of dollars more than we anticipated. Nevertheless, the money was well spent. The satisfaction in knowing that our art compares most favorably with that of Remington—the greatest of Indian painters—amply repays us for all of our efforts.

## NEW HOWE SPOT LAMP



The Howe Lamp & Manufacturing Company, Chicago, announces new model No. 17, a light, single-shell spot lamp. The Howe Flexible Control, construction of the patented swivel-joints is such that they always remain flexible. The lamp is always easily movable, yet holds firmly in any position in which it may be placed.

The No. 17 Spot Lamp is made entirely of brass with the exception of the bracket and clamp. Its large convex lens its brilliant nickel trimmings and its richly enameled body all combine to produce an effect decidedly pleasing to the eye. The parabolic reflector, the conduit cable and other fittings are finished in triple nickel plate. The focusing device permits the concentration of the light into a long, piercing ray for spotting objects far distant. Wires are protected by a water-proof conduit. The turn-button switch is also of waterproof construction. The 4-inch rear view mirror is optional. Price, $10.00; with plate mirror, $11.50.

The Norman Cowan Co. are western representatives for Howe lamps.

# SHOW THESE AND YOU SELL THEM

**Hardy's Combination Running Board Box Camp, Cook and Dining Table**

—It Takes the Rough out of Camp Life

As a running board box, it measures 10½x10½x30 inches, and holds a complete Camp Cooking Outfit, a dining service and a gas stove.

It is quickly convertible into a camp table, having two shelves and a top 26x30 inches.

It eliminates the open campfire for cooking purposes and enables the person doing the cooking to stand upright and cook with ease, and when the meal is prepared to partake of the same, comfortably seated at a dining table.

There's no more stooping and squatting in awkward positions whilst cooking and eating and no more blinding smoke. dirt, flying sparks, blackened camp kettles or hunting for firewood if you use the Hardy Combination.

It is truly the Camper's Friend.

For sale by Hardware and Sporting Goods Stores and Camp Equipment Houses.

## FRED NOWOTNY, YOUNG ACCESSORY VETERAN

Even though the automobile accessory business in the West and even throughout the United States is comparatively new, there are few men now active who were in the industry at the start. Automobiles were mighty few fifteen or twenty years ago, and automobile accessories were almost unknown. The automotive equipment and accessory trade has recruited new members from many sources.

Fine men and strong have come into the field in recent years. But there is no friend like an old friend, and the man who can claim connection with automobile accessories and equipment from the start is a power and influence and a valuable asset to any institution.

Such a man is Fred Nowotny, Automobile Accessory Manager for Hughson & Merton, Inc. Mr. Nowotny was one of those at the birth of the automobile accessory business in the present West, and thus it is that his development, progress and career has been practically that of the industry. Both have grown together.

To go back to first causes, Mr. Nowotny received his start in London, for that is where he was born. At an early period of his development he discovered that the British Isles were not big enough for him, and moved half way across the globe to the "wilds of Oregon" (as the uninformed would say), settling in Portland thirty-three years ago.

As a young man his special love was in bicycle racing, and he naturally spent his working days in the bicycle repair business.

In the early nineties he was connected with F. M. Jones, who was representative of the Racycle in the Northwest at that time. It was not long, however, before he became acquainted in his bicycle racing with C. F. Wright and his partner, young Ballou. These young adventurers had started into the bicycle repair business at Great Falls, Montana, and so encouraging had been their success there that they early moved to Portland.

Branching out from bicycle repairing, soon they began to represent bicycle companies in the Northwest. Very early Fred Nowotny cast his lot with Ballou & Wright and he has been with them ever since. When automobiles gradually took the place of bicycles, automobile accessories took the place of bicycle sundries and supplies on their shelves, although the institution is still prepared to handle the bicycle business in the Northwest.

Thus Mr. Nowotny has had valuable experience and a great opportunity to know the automobile accessory business as it is so admirably conducted in the Northwest by his former employers.

Recently this new opportunity presented itself to him in handling the entire Pacific Coast and Far West for Hughson & Merton, and his affiliation with the organization is certainly a doubly fortunate transaction, conferring benefit on both Mr. Nowotny and upon Hughson & Merton. His headquarters are at San Francisco.

---

## EFFICIENT COOLING OF FORD ENGINES

The Corcoran Manufacturing Company of Cincinnati has filled a long-felt want in the Peerless Guaranteed Honeycomb Radiator for Ford cars. The demand for the Peerless Radiator from all parts of the globe has been so great that The Corcoran Manufacturing Company has been forced to occupy a still larger factory, until now their new, modern plant is one of the largest in the country devoted exclusively to the manufacture of automobile accessories.

The Honeycomb Radiator for Ford cars is the "popular seller" of the Peerless line. This is manufactured in two models, one for cars of 1909 to 1916 make, and the other for cars of 1917 and later model Fords. The latter model is especially adaptable to Ford one-ton trucks.

The success of the Peerless Radiator is due, among other things, to the scientific construction and efficiency of the Peerless Core. The Honeycomb type used is the same as is successfully employed on the highest class cars. The Peerless Honeycomb core has 4400 more square inches of cooling surface than the ordinary tubular type and its water capacity is four times as great as the tubular type. All parts coming in contact with water are of durable brass and the flexibility of the core construction allows ample expansion, permitting core to thaw, if frozen, without any strain or breakage.

The unusual feature of the Peerless Guaranteed Radiator is that it costs no more than other radiators without these important advantages.

The cut shows the Peerless No. 11 for 1917 and later model Fords. Dimensions are the same as regular Ford radiator, insuring easy and quick installation. Radiator shell or casing is regularly finished with two heavy coats of black japan; honeycomb 2½-inch brass core is gray. Nickel shell at small extra cost. An inquiry to Department A will bring detailed description of The Corcoran Manufacturing Company's Peerless Guaranteed Radiators, as well as their other meritorious products: hoods, radiator and hood combinations, fenders and tool boxes.

---

The Autoparts Supply Company of Seattle, Washington, is rapidly spreading throughout the Northwest. The company has just opened branches at Walla Walla, Washington, and Boise, Idaho, making eight separate branches in the Northwest. Others are at Portland, Tacoma, Spokane, Yakima and Bellingham.

E. L. Hawkes was the founder of the concern seven years ago, and he is the active and shrewd president and manager.

---

The hardware and implement dealers of Sacramento, California, evidenced their cooperation and spirit of working together by agreeing to close at 1 o'clock on Saturdays during the months of July and August. Eleven firms joined in the agreement.

# Present Credit Conditions

**(Address by John Perrin, Chairman of the Board of Directors and Federal Reserve Agent, Federal Reserve Bank of San Francisco, at Automotive Equipment Association Convention at Del Monte)**

WHEN an individual business concern limits its operations to a volume which it can handle with its own capital and surely available credit, it is obviously in a safe financial position. When the volume exceeds this, it runs the risk of finding it difficult to obtain additional credit which may be absolutely essential to enable it to meet its maturing obligations. If impossible to obtain the additional credit, bankruptcy is faced.

A nation's business is simply the aggregation of individual businesses. A nation's credit situation is over-extended when individual businesses generally are over-extended. Under such circumstances there must be an adjustment of the volume of business to the available supply of capital and credit.

The credit situation of this country is now over-expanded. Since 1914, loans of National banks have grown approximately from $6,000,000,000 to $12,000,000,000 and if investments in Liberty Bonds and other securities are included loans and investments have grown from about $8,500,000,000 to nearly $17,000,000,000. The increase in loans and investments of State banks has been in approximately the same proportion.

Since the armistice, the increase in bank loans has been more rapid than during the war. In one year alone, from April 1, 1919, to April 1, 1920, the increase was approximately 25 per cent. In the face of this large increase in bank loans during that one year there was an estimated decrease in production of not less than 10 per cent.

Some of the causes contributing to the great increase of loans are the following:

1. There are many thousands of blockaded freight cars loaded with goods against which loans have been made and the liquidation of which depends upon the movement of the cars.
2. Large quantities of commodities of various kinds against which loans have been made are held for lack of cars and ships.
3. Banks have approximately $4,500,000,000 of funds tied up in United States Government obligations and loans against them.
4. Huge sums have been loaned to individuals, firms and corporations for payment of income and excess profits taxes.

### Inadequate Transportation a Handicap

The attacks upon railroads and the failure to grant advances in rates proportioned to increased costs have resulted in so undermining the credit of railroads that generally speaking they have been unable to secure funds needed for extensions and increase of equipment to the extent necessary to take care of the growing volume of our commerce.

While the tonnage hauled has increased 47 per cent, equipment has increased only 1.9 per cent. The obvious result of a failure to expand our transportation facilities in proportion to the growth of our commerce is that because of delay in transit a greater amount of credit is required for handling a given volume of commodities from the point of production to the point of consumption. A partial blockade of freight cars such as now exists is equivalent to a reduction in both our transportation facilities and our credit facilities.

If, instead of $4,500,000,000 of bank credits being tied up in advances against Government obligations, this amount were freed for the use of industry and commerce, it would make possible a vast increase in our output of commodities and a corresponding addition to our national wealth. This amount thus advanced by the banks against Government obligations would, of course, be freed if savings were increased to that extent and invested in these Government bonds, which would thus be taken out of the banks and placed in safe deposit boxes.

Earnings, which are the natural additions to national capital, are being absorbed in a large measure as income and excess profits taxes for Government expenditures. The shortage of capital is very evident. The obvious remedy would be to produce as much as possible and to consume as little as possible since this would most rapidly increase our capital and most effectively rectify the lack of capital and the present strained credit situation. It appears to be the fact, however, that our present course is the opposite—declining production and unnecessary consumption.

A long time will undoubtedly be required in correcting some of these difficulties. Perhaps the best that we can hope is that we may get ourselves started in the right direction and ultimately work out good results. For instance, it will take a good while to correct the disadvantages in our railroad situation. Also, we shall have a heavy burden of taxes for a long time and the investment of our savings will only slowly withdraw Government Bonds from bank loans.

### Credit Is Already Strained

Besides these longer problems, however, there is an immediate problem which calls for the serious attention of all those engaged in industry and commerce and their co-operation in working out the solution. Credit is already strained. This is clearly shown by the rate now ruling, such as 6 to 6½ per cent for loans of this Government, 7½ per cent for the current loan

of the Dominion of Canada, 7 to 7½ per cent for choicest railroad obligations and 7 to 8 per cent for mercantile and manufacturing loans.

If the present volume of bank loans is continued undiminished and if to this there is added the additional volume of loans required for the Fall crop movement, there cannot fail to be greatly increased strains with still higher rates. In such a competition for credit, which would drive rates still higher, it would obviously result that many would find it exceedingly difficult and perhaps even impossible to borrow. If it is avoidable, there seems no justification for allowing ourselves to go forward into such a situation, which would hamper the conduct of our commerce and industry.

What of the Federal Reserve System in such a situation and to what extent can it and will it help?

Many are perhaps inclined to regard the Federal Reserve System as being in principle the same as an ordinary bank but having huge size and unlimited resources. The Federal Reserve System really is fundamentally a mechanism for holding the vault cash of member banks. The vault cash which member banks now carry added to the deposits which they carry with the Federal Reserve banks together constitute a smaller proportion of their deposits than was their vault cash alone just prior to the establishment of the Federal Reserve System.

Lending operations of Federal Reserve banks naturally have for their purpose the maintenance of the stability of commerce and not its expansion. The expansion of industry and commerce would naturally have relation to the increase in capital of member banks and the increased savings of their depositors. Stating it in another way, Federal Reserve banks should not be constant large lenders nor should any member bank be constantly indebted to the Federal Reserve Bank.

A member bank should call upon its Federal Reserve Bank only for occasional and unusual requirements. Following such a course, Federal Reserve banks would always be so strong that no question of their ability to meet any emergency would ever arise. A member bank might lay its plans ever so prudently and a freight blockade might defer liquidation of loans so that it would inadvertently find itself overloaned.

That would be a most appropriate situation for rediscounting with the Federal Reserve Bank. A bank might make the usual preparations to meet the requirements of its customers at crop moving time, but an unusually large crop might require a considerably greater amount of funds than had been anticipated. The Federal Reserve Bank could most properly be called upon to aid by assisting in carrying such a peak load. It appears to me that the soundest view is to regard Federal Reserve banks as the reserve of vault cash of member banks to be used sparingly and in emergencies.

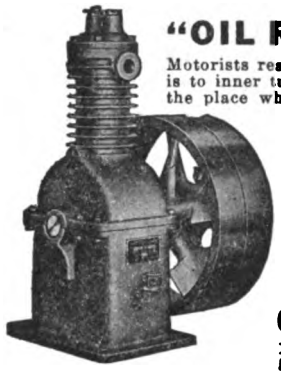
**Reserve Banks and Tide-Over Credits**

I have mentioned the simple way in which an individual business, which had become overexpanded, could, if given reasonable time, effect partial liquidation by reducing its inventory and collecting more closely its outstanding accounts. The Federal Reserve System is the means by which partial liquidation of business over-extended throughout the country may be effected in orderly fashion.

Banks which are over-loaned rediscount with the Federal Reserve banks and have a part of their loans thus carried while the process of partial liquidation by their customers is taking place and adjustment being made of the volume of industry and commerce to a proper relation with the available supply of capital and credit. It is in this way that the Federal Reserve System averts a panic by enabling the member banks to give to over-expanded business concerns time for gradual reduction in the volume of their operations.

The Federal Reserve System is not intended, however, to make available a vast new supply of loanable funds. There is a great difference between providing a vast additional supply of funds for continuous use and providing the credits necessary for tiding over an emergency situation until partial liquidation can be effected.

During the war, Federal Reserve banks did everything within their legal power to facilitate the financing of the war and for a long period after the signing of the armistice kept their discount rates exceptionally low so as to make it possible for those who had patriotically pledged their credit to buy Government Bonds to borrow against them without loss. In order to diminish the heavy demands for rediscounts, the Federal Reserve banks have applied the natural brake of advancing rediscount rates, until that of the Federal Reserve Bank of San Francisco is now 6 per cent.



Member banks have also sought to co-operate by exercising discrimination such that there would not be restriction in loans for the production of vital necessities, but so that loans should be made less freely for purposes not so essential. The demand for rediscounts has, however, continued so insistently in spite of the application of these brakes that the reserves of Federal Reserve banks now are reduced to only a little above the legal limit. The Federal Reserve Board has authority to suspend the reserve requirements, and if that were done Federal Reserve banks could increase their advances to member banks still further.

**Wiser to Avoid an Emergency**

If necessity should arise, I have no question in believing that the Federal Reserve Board would suspend the reserve requirements and

Your Guarantee Against Tube Leakage—

*Have DURAL TUBES in Your Tires*

More flat tires come from leaky tubes than from punctures. Leaky valve joints, porous rubber, leaky splicing—all are common causes of defective tubes.

But tube deflation disappears when you equip with Dural Tubes. They are guaranteed against it.

Laminated construction eliminates ordinary porosity.

Hermetical sealing of the valve and a special reinforcement of rubber-impregnated duck prevents valve base leakage.

The splice steam-cured—the expensive way but the sure way to prevent splice leakage.

THE DURAL GUARANTEE

We will replace, free of charge, any Dural Antimony Red Tube, leaking at the splice, leaking at valve joint, porous or out of shape, if it is returned to us one year from date of purchase.

Read the guarantee and then prove it for yourself by buying Dural Tubes. You'll get full-sized, extra thick tubes tha. give long life and thorough satisfaction. More—you'll get a tube with an extra overlap that is the best protection in the world against the most common cause of blow-outs—Pinching.

*—and yet They Cost No More Than Ordinary Tubes*

*Let us put a Dural Tube on your car.*

also that the Federal Reserve Banks would courageously meet any emergency and thus prevent panic. If Federal Reserve banks had only the legal minimum reserves, 40 per cent against Federal reserve notes and 35 per cent against deposits, and if reserve requirements were suspended, they would still have large lending power. If such a situation should arise, however, it would be proper that rather drastic procedure should be adopted. Discount rates would naturally be advanced still more sharply and banks would be called upon to curtail their rediscounts as rapidly as could conveniently be done, without undue disturbance of business, until legal reserves were restored.

Instead, however, of relying upon the Federal Reserve System to meet an emergency, it seems far more prudent that corrective steps should be taken beforehand to avoid the emergency. By that I mean that Federal Reserve banks, member banks and the customers of member banks should all co-operate to bring about a moderate reduction of loans during the next three or four months.

Loans for the production of necessary food, fuel and clothing should obviously not be curtailed since these products are fundamental essentials of life, but all loans for purposes less essential than these should be moderately reduced. If that is accomplished within the next three or four months, we shall meet the crop moving demand with an easier credit situation than we now have, and it is necessary that we should do so if we are to avoid a still more stringent situation this Fall. To attempt to force the utmost speed in business at the present time is to risk an interruption in our prosperity. If we bring about a moderate curtailment in the volume of our business during the next three or four months and if we exercise moderation for a period, both as to expansion of business and as to personal consumption, there seems every reason why we should enjoy uninterrupted prosperity for a long period.

---

One of the largest and best appointed sporting goods stores in Colorado has been opened in Colorado Springs, Colorado, by the Colorado Sporting Goods Company. On moving into its new building, the Company doubled its capacity. One of the features of the new store is a shooting range in the basement for rifle and revolver experts. Camping equipment will be carried as well as sporting goods.

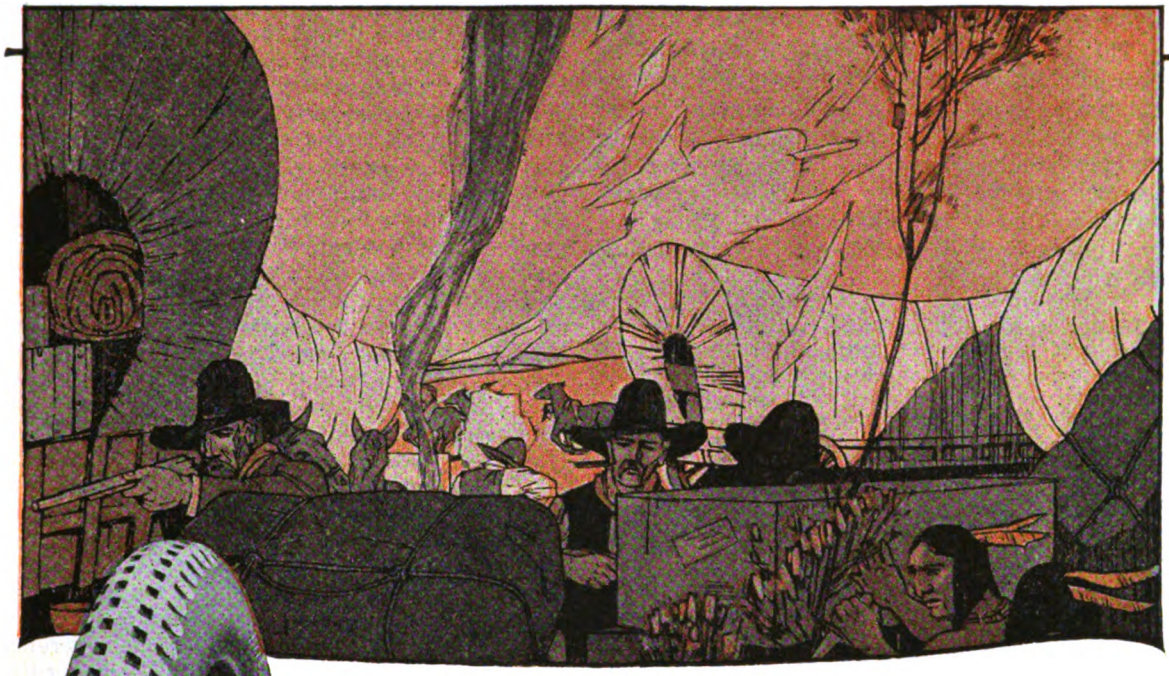
A new member of the automobile accessory industry at Helena, Montana, is the branch of the William E. Chase Company, just opened. Harold Dishon is the local manager and Walter L. Traub is the "Chase-trained" service man with five years' experience behind him in this end of the company's activities. A full stock including 10,000 individual parts has been installed and the trade in the territory tributary to Helena will have the benefit of selection from another of the large national automotive and electrical supply houses.

## DON S. STANBERY WITH ROWNTREE IN SEATTLE

Don S. Stanbery (and that middle initial "S" stands for service), who has been connected with the John T. Rowntree organization at Los Angeles for some time, assumes his new duties with the Seattle office of this well known sales corporation August 1st, assisting Bruce Findlay, and traveling throughout the cities of the great northwest.

The HARDWARE WORLD wishes to introduce him to our readers in that section who may not have had the opportunity of meeting him personally.

Prior to becoming associated with the John T. Rowntree Co., Mr. Stanbery was sales manager for the Union Hardware & Metal Co., Los Angeles, and was known as one of the live wires of that institution. Aside from his well known ability and knowledge of hardware and kindred lines, among his other qualities are his pleasing personality and his sincere and honest friendship for everyone connected with the trade. He will undoubtedly add to his already wide acquaintance in his new fields.



---

## SEELEY B. MOE AT LONG BEACH

The hardware trade of Southern California will be interested to know that Seeley B. Moe has acquired an interest in the American Avenue Hardware Company at Long Beach, California. His partner in this enterprise is John Haasis and he is sure to continue best traditions of the hardware trade in Southern and Central California just as he has in the past.

Mr. Moe has been connected with the Union Hardware & Metal Company at Los Angeles for 16 years and for the last 10 years has been buyer and manager of the builders' hardware department. His faithful and careful service for the "Union" has made him many friends who will be glad to know of his new enterprise and plans for the future. Mr. Moe will be glad to meet any of his friends of the trade at Long Beach, where he is now located.

# THE COURAGE OF CONVICTION

*The conviction of the pioneer that he was a match for at least five Indians resulted in a courage that swept all before it on the route overland.*

There is not one "unique" construction method or deceiving special process used in the making of Overland tires. There are no radically different "features" for tire buyers to argue about with distributors and dealers.

The Overland Tire & Rubber Company is convinced that aggressive distributors and dealers do not care to pioneer with an unusual tire or an unusual sales and advertising policy. Both Overland tires and Overland policy are standard.

If you are interested in tires and tubes that follow the line of least sales resistance, today is none too soon to write or wire for further particulars.

## IF SOME OF YOUR WAR TIME ORDERS WERE UNFILLED

(Copyright by Elton J. Buckley)

The interference which the war caused to contracts and orders made and given during that period is in a sense just beginning to be felt, particularly as to a class of business which was not killed entirely, but only suspended by government interference. The following letter shows the kind of case I refer to, and also shows that interesting litigation can and probably will come out of it.

Brooklyn, N. Y.

In 1916 we accepted an order from a Pennsylvania customer for about $1000 worth of our goods to be shipped promptly. Before the order could be filled the government took our plant over and we had to lie down on this order and a great many more. The order was given on our regular forms, and contained no conditions whatever.

When the government took our plant over we considered that the orders from private customers were dead and believed that our customers did also. Some of them, however, have started to notify us that they expect us to deliver now that the government is no longer using our plant. As a matter of fact, it is some time since the government ceased to use our plant, and some of the demands for the filling of these orders began shortly after it ceased. We told all these customers that we did not think they should expect to get the goods now, because the cost has advanced about 50 per cent and we could not afford to fill the orders at the contract price.

About 30 days ago we received a letter from the customer referred to above, who had placed the $1000 order, demanding delivery by May 1st. We replied the same as we had with the others, and an answer same that if delivery was not made by May 1st, suit would be begun against us. Of course we could not make delivery and we have been made defendant in a suit for the difference between the order price and the present market price, which is about $400. We are afraid that other customers may do likewise and involve us in a large sum. What we wish to know is, are we liable on the old orders, or did they go by the board when the government took over our plant?

X. & CO.

There were a great many of these orders, without doubt. Some provided for prompt shipment, some provided for shipment by a certain date, some provided for immediate shipment, some provided for shipment as soon as possible. One or another phase of the war interfered—the government took over plants or commandeered the goods, and shipment has never been made. So far as I have seen, and I have seen quite a number of these orders, none of them contained any clause cancelling them entirely if the government should in any way prevent shipment according to terms.

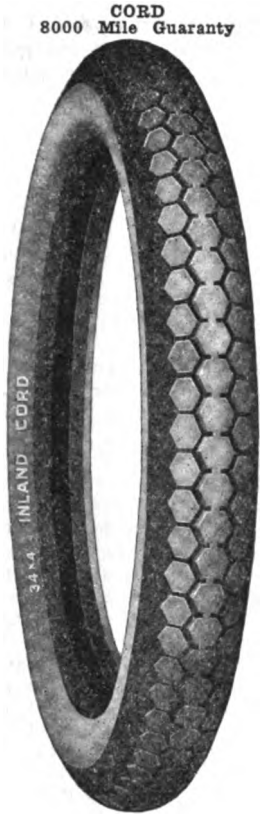
The question is, just as in the case submitted, what became of this business? Did it die when the government stepped between the seller and the buyer, or was it merely suspended until the government stepped out again?

If such an order was merely suspended, of course the seller would be under legal obligation to fill it, no matter what the price, provided the buyer used due diligence in presenting his claim after the obstacle to filling the order disappeared.

A great many of these unfilled orders are dead without a doubt, because of the buyer's failure to do anything about it; in other words, because of his apparent concurrence in the seller's idea that they were dead.

The law as to the status of these orders is this: Orders accepted and unfilled when the government's interference made it impossible to fill them according to terms, are merely suspended, and not cancelled. After the government has handed the plant back, or has ceased to require the product, the old unfilled orders are restored, and the buyer can claim delivery. Whether he must actually demand delivery before the seller needs to move, is an open question. It would be safer for the buyer to make demand, but it is not clear that his right is gone if he does not.

The buyer, however, cannot sit silent and then when the market has reached its peak, suddenly demand delivery and collect damages, based on the then high market, if delivery is not made. If I were advising a buyer in such a case I should advise him to learn when the seller was free from government interference, and then make demand for delivery according to the original terms, as if the order had just been given. And to enforce that demand by suit if delivery was not made.



The buyer who waits a year or two after the seller is free from government interference, and then for the first time asserts his claim, is in danger of being thrown out of court by his own neglect and delay. The bearing of the factor of delay on the case must of course be governed by the particular facts. This much is sure, however, the business is alive after the obstacle has disappeared and can be realized upon by the buyer.

One of these cases is just going through the courts now. It involves lumber. The original contract read "ship soon as possible," but the government stepped in and took the goods. The buyer, after the shipper was once more able to handle private business, made demand on the seller for delivery. By that time the market was $40,000 higher. The shipper refused to ship, arguing that the business was dead, but the buyer sued him, and I would wager everything I am worth he will get a verdict. In this case the buyer kept after the seller until it became clear that there would be no delivery, and then served notice that delivery must be made by a certain date or suit would be brought. Delivery was not made and suit followed.

---

**The fact that the Merges Hardware Company of Portland, Oregon, has increased its capital stock from $5000 to $10,000 is indicative of the fact that merchants in these times must have double the capital to do the same business that he was doing three or four years ago. To meet this raise, he must be sure that his turnover on his stock is in proportion.**

## STOP WASTING GASOLINE

(Richard Spillane in the Philadelphia Public Ledger)

Some persons think that what they do with their money or with what they purchase with their money is not any other person's business.

They are mistaken.

A lot of persons are buying gasoline today and using it wastefully. In so doing they are penalizing all the people, and particularly all owners of automobiles.

There are 6,000,000 passenger cars in the United States. There is a shortage of gasoline. Through gross waste this shortage is made more acute than it should be. If it is not checked the price of gasoline will be forced to a height that will compel many persons to lay up their cars.

The automobile is of great utility. It gives opportunity to many millions of persons—men, women and children—to get out into the country, to have recreation and pleasures that otherwise would be difficult for them to obtain. It is a great agency in the promotion of good roads. It is a great agency, too, in the promotion of good health. Anything that restricts its use is of public concern.

Those who have studied the subject say one-half a gallon of gasoline per car is wasted today through carelessness, through overuse of cars and through useless mileage. This means 3,000,000 gallons a day.

This has to be stopped or the price of gasoline will stop the use of tens and tens of thousands of cars. It will stop if you recognize the fact that any one who wastes gasoline is doing an injury to you whether you own a car or do not own one.

How does the waste of gasoline concern the person who does not own a car, might be asked. Let us see.

There are hundreds of thousands of motor trucks. They do a great work in the transportation of various commodities. There are hundreds of thousands of motor cars to be built this year. If the price of gasoline advances the cost of transporting goods will be increased and you will have to pay it in the higher prices you pay for eggs, for milk, for beef, for vegetables, for moving your household goods, for anything and everything you eat or use, for directly or indirectly it will be in the bill the general public has to pay.

A waste of one-half gallon of gasoline per passenger car per day means 1,095,000,000 gallons a year. Wow!

One gallon of gasoline will provide the energy to move a one-ton truck 15 miles, or to put it in another way, it will move 15 tons of freight one mile. If the users of passenger cars would save the one-half gallon a day they waste it would equal 16,425,000,000 ton miles of haul.

Economy in gasoline means more than the general public appreciates. More oil is being used today than is being produced. That means the reserve stocks are being drawn upon. Curtailment of waste is imperative. It rests with users of gasoline to do voluntarily what otherwise they inevitably will be forced to do.

Save oil.

---

## SAFETY FIRST IN GLASS

What should we do without glass? We regard it as one of the necessaries of civilized life; yet, under certain conditions, it can be almost as dangerous as a sharp knife in the hands of an irresponsible person.

Glass is a most useful servant; a utility of greatest convenience when conditions are normal, but when accidents occur causing glass to break and slivers and splinters to fly through the air, human life is endangered. Many a death and many a serious wound has resulted from flying pieces of broken glass.

Serious consequences are especially to be feared from the accidental breaking, in collision or otherwise, of automobile wind-shields, back and side curtain lights; street car doors and windows; railroad passenger car windows; locomotive cab windows; port hole and other window lights on ships; die cutting, grinding, polishing, loading and other types of machine guards; office and bank partitions; revolving doors; doors and windows generally in dwellings, stores, factories, etc.

Science has come to the rescue with a laminated glass, consisting of two sheets of ordinary glass between which is interposed a thin sheet of pyroxylin plastic. Hydraulic pressure and the application of the proper degree of heat welds the glass and pyroxylin sheet together into a solid unit. The pyroxylin binder prevents any scattering of fragments in the event of violent breakage.

The transparency of the glass is reduced but 2½ to 3 per cent by the insertion of the plastic sheet. This would never be noticed by the ordinary person not especially looking for a difference.

If life and accident insurance statistics were consulted to get a record of the vast number of accidents in the aggregate resulting from broken glass, it could readily be shown that the increased first cost of laminated glass to be used in exposed places where experience has proven accidents are most likely to happen, would be more than offset by savings in death and injury insurance payments, loss of wages due to lost time while recovering from wounds and damages to property. Then, too, the suffering and disfigurement caused by cuts should be considered.

Laminated glass has its place in the world. As its virtues become known, it is undoubtedly going to be specified in many industries in which it is now unknown.

---

## TRITCH INVITES YOU TO DENVER

"Come to Denver at our expense," is the way the Tritch Hardware Company of Denver, Colorado, puts its invitation to the western trade for jobbers and manufacturers market week in Denver, August 16 to 21, 1920.

Geographically, Denver is in the center of the West, and the radiating lines drawn from Denver strike almost equally at San Francisco, Los Angeles, El Paso, St. Louis, Minneapolis, Great Falls, Seattle and Portland. President Frank Bare of the Tritch Hardware Company is most active in the Denver Wholesale Trade Extension Bureau, and any hardware merchant in the Rocky Mountain region or the territory tributary to Denver is sure of a warm welcome and a hearty good time enjoying the hospitality of the Tritch Hardware Company. Merchants in Texas, Oklahoma, New Mexico and Arizona are particularly fortunate in being tributary to the Denver jobbing center.

PEXTO

THE PECK STOW & WILCOX COMPANY
Southington Conn. Cleveland Ohio
U.S.A.

## PEXTO CATALOG No. 20, CENTENNIAL EDITION, A WONDERFUL BOOK

In presenting to the hardware trade this centennial edition of the Pexto catalog covering the largest line of mechanics' hand tools, builders' and general hardware manufactured by any one company, no time, effort, or expense has been spared to produce a complete book which would not only be a satisfactory representative of the Peck, Stow & Wilcox Company, covering tools and hardware manufactured continuously from 1819, but also one which hardware buyers, salesmen and clerks may find an indispensable daily help in providing for their requirements covering the list of Pexto products.

In producing this book they have followed closely the idea of concentrating illustrations and descriptions into a double column with the advantage of carrying quickly and concisely to the mind of the reader the essential details of goods catalogued.

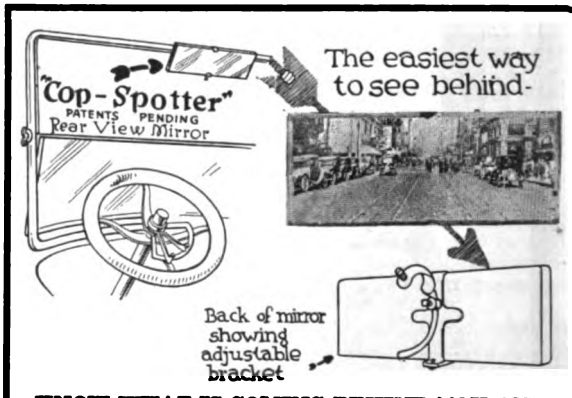
In this book you will find each kind of tools in a section by itself, as for instance; braces, chisels, pliers, wrenches, snips, pruning shears, etc., are considered a section and are preceeded by colored illustrations and descriptions of displays and selling helps, and this page or pages is followed with a short descriptive talk for salesmen and clerks giving the merits of the line.

Illustrations of the Cleveland, Ohio, and Southington, Conn., plants appear in the front of the book. The feature of terms, guarantee, displays, uniform labels, text books for workmen, pruning shear books for the gardener, book of standard details for contractors and builders in connection with builders' hardware are all properly illustrated and described for the benefit of the hardware trade.

A novel feature of this catalog is the "Rehardware" editorial giving thought and trade building features which will profitably and satisfactorily increase the builders' hardware business of the merchants throughout the country. This book is not only a catalog, but in addition is the manufacturer's silent salesman. Many other features are contained in this book of which a review will bring them forcibly to your attention, particularly the page showing the new standardized labels in orange, blue, white and black. Also the uniform color of packages and attractive and novel features.

We might go on at some length relating the ingenuity built into this catalog, but must leave a lot of it for your surprise and attention on receiving a copy.

The book is printed on an excellent quality of paper carrying the name of the company and trade mark on each page in color. The cover is handsomely designed and printed in the standard colors of the company, orange, blue, white and black.



If your copy does not come along promptly, please address the company at Southington, Conn., attention of "Catalog Department" and your request for copy will be promptly granted.

## ALBERT LEA "UTILITY" LINE MOVING

The Albert Lea Sprayer Company at Albert Lea, Minnesota, reports, along with other manufacturers, that their hands have been full and the organization rushed in supplying the demands of the trade and in keeping things moving this spring.

Their "Utility" line of sprayers, hose goods, poultry feeders, and pumps of all sorts is known to the trade throughout the country. The United Sales Company at Minneapolis, Minnesota, is the general sales agents for Albert Lea goods.

"It pays to spray," says dealers in Albert Lea sprayers to their customers, but when they are mentioning the Albert Lea line, they say that "It pays to stay."

## HOW JOHN BROWNING WORKS

There is a little room in the great Colt factory at Hartford, Conn., occupied by a man of modest bearing, from which evolved the plans by which were built the great mass of automatic rifles and pistols that were the wonders of the world. This man is the great Browning, father of the automatic pistol and inventor of the world's greatest automatic rifle and automatic machine gun—Colt's.

Working at the Colt factories with a corps of capable assistants, John M. Browning brought to realization the dream which Samuel Colt had of making the Colt factories at Hartford a complete arsenal—an adjunct to the government armories, where side arms and rifles of all kinds could be made in required quantities for the proper equipment of the United States troops.

Many have been curious to know how Browning works. He has been conceived by some as a nervous, excitable individual, so buried in thought and work that it was dangerous to go near him; a man whose very appearance suggested guns and warfare. But the contrary is just the case.

Two stories about Browning will illustrate the kind of man he is. One day there came a rush telegram from headquarters that difficulty was being experienced with a small part of the mechanism of the Browning gun. This was in the early stages of the development of this wonderful weapon. And while the fault which this small mechanism showed seemed trivial, it was so baffling that none of the mechanics or engineers could see how it could be remedied, and they hurried to Browning with their trouble.

This was about five o'clock in the evening. Browning cooly remarked that he would fix it for them in the morning, and he put on his hat and went home.

It was so important that this be remedied at once that the officer who had come to get help was unable to sleep wondering how Browning would overcome the difficulty. When he went to Browning's sleeping quarters in the morning about six o'clock, Browning was up and out. He hurried to the little room where Browning worked and he was not there, nor could he find him anywhere.

About eight o'clock Browning strolled in. The officer excitedly asked when he was going to work out the new plane. Browning said, "Why. that thing has all been taken care of hours ago." And he showed him with a few strokes of his pencil just exactly how the difficulty could be overcome.

It was so simple that the officer was amazed and said, "Why, you knew all the time how you would do it." Browning said, "I didn't, I got up about four o'clock this morning and took a little stroll around town. I like to do my thinking in the early morning while I stroll about town."

### Worked Out In His Head

Browning works out every problem in his head, so that very rarely has anything to be changed from his preliminary rough pencil sketch, from which the plan is eventually made. And there is never anything very intricate in Browning's plans. In fact, it is the beautiful simplicity of the Colt automatic pistol, automatic rifle and machine gun which makes them so efficient.

When the competitive tests of the various machine guns were being made, one of Browning's competitors complained that he should be permitted to renew one of the small parts in his machine gun should it give out during the test, because he supplied each one of these guns of a quantity of these small parts which took only a fraction of a minute to put in, and that the soldiers even under fire could so renew the gun, and that the test which the government was asking was unnecessarily severe on this small part.

They came to Browning and told him that he could have the same privilege after acceding the allowance. Browning shrugged his shoulders and said he would not bother with a gun that had to be accompanied by a box full of parts in order to make it efficient.

### Nothing Stopped Gun's Work

The Browning gun was put into competitive tests without any extra parts, and the secret of its success lay in the fact that it would work no matter how rusty it got—and the government made it rusty on purpose because guns get rusty in warfare—no matter how much sand was thrown into it, and no matter how hard they tried to block its mechanism.

On several occasions, when Browning was crowded with work of the kind that most men would break under, he was stopped and explained, so that a child could understand it, all the workings of his guns to some interested visitor.

## WINCHESTER BUYS MACK AX PLANT

The Winchester Company has purchased the Mack Ax Plant at Beaver Falls, Pa. The factory is well located, close to Pittsburgh, where steel and other raw material can be easily and quickly secured. As a shipping point, Pittsburgh is said to be one of the best in the country.

The Mack Ax Plant is well known to the trade. It was established by Joseph Graff at Beaver Falls, Pa., in 1871. Afterward the plant was sold to the Hubbard Company, Pittsburg, in 1877.

In 1890 it was consolidated with the American Ax and Tool Company and was operated as a unit of that firm until 1912, when it was sold to the Kelly Ax Manufacturing Company, of Charlestown, West Virginia. Immediately after this purchase the plant was closed down and the machinery removed. The building and real estate were sold to John Mack, Sr., who immediatelv organized the Mack Ax Company, and began the manufacture of their well known make of axes. Mr. Mack began operations in May, 1913, employing 135 people. The organization which he has built up will be largely retained by the Winchester Company.

## BRAENDER TIRE WESTERN OFFICES

The Braender Tire & Rubber Company of Rutherford, New Jersey, handles its western business and trade through a direct factory branch in San Francisco. E. F. Zuern is the branch manager for the company and is an experienced tire man and one thoroughly familiar with the Braender line. The Braender branch is at 131 Eighth street, San Francisco, and handles the entire western field.

At the Ernst Hardware Store in Seattle, Washington, is being displayed for a short time one of the most famous Moreau's paintings, "The Village Blacksmith,"

## ECONOMY IN TIME AND SERVICE

Regularity and orderliness are qualities in the hardware store which most customers appreciate. The hardware store which has more the appearance of a junk-shop will not secure recognition as an efficient distributor. Nails or bolts lying scattered all over the floor do not meet with the customer's favor. When the purchaser has bought some nails or bolts, which, upon examination, prove to be a mixture of different sizes, it is to be expected that his next need in hardware is not likely to be supplied by the hardware dealer from whom he purchased the assortment of nails or bolts. This is but one phase of haphazard arrangement of small articles in a hardware store. There is also to be considered the depreciation in the value of the stock if it is so placed that much of it is wasted or mixed. Bolts and nails should be kept in proper order.

The Wellston Manufacturing Company, 203 East Second street, Wellston, Ohio, offers hardware dealers devices by means of which they can do away with waste and disorderliness in the stocking and selling of bolts, nails and similar articles.

Illustrated herewith is the "Eclipse" All-Steel Bolt Case made by this company. These cases are made in eight sizes, and in from three to ten sections. Each compartment revolves independently of the others on ball bearings. These cases are solidly built and will last a long time. The Wellston Manufacturing Company, Drawer AA, Wellston, Ohio, will furnish detailed information concerning its products to retailers who write for it.

## A QUICK SELLING GARDEN TOOL

The Alexander Mfg. Co., Ames, Iowa, make one of the best and most popular selling garden tools on the market. It is known as their No. 3X Garden Raiser.

It is made of the best material, all the latest improvements, is so constructed that no wrench or tool of any kind is needed to change the equipment. They give an extraordinary finish in grinding and polishing the tillage tools. Without doubt it is one of the best values in a garden tool that is on the market.

They will be glad to give full information to any of our readers upon request, and are looking for desirable representatives where they are not already represented.

One of the most progressive of the Intermountain institutions is the Biggs-Kurtz Hardware & Implement Company at Montrose, Colorado. They are alive to their opportunities both in hardware and implement lines, and Manager G. H. Brosh is looked upon as one of the leaders of the trade in the Colorado territory. They report that business has been excellent and the prospects are far better.

President Branson of the Branson-Griswold Hardware Company at Trinidad, Colorado, was among the western merchants who attended the recent convention of Winchester dealers at New Haven, Connecticut.

## A DRIVE ON BABY SCALES

A new arrival has just been announced in the home of scales. It represents a new idea—that of utility blended with appealing grace. The scale on which this idea is being materialized is the new baby scale illustrated above.

It is a unique production. Its body is most attractively white and decorated with gilt bands. A white enamelled wicker basket tops the scale. The most distinctive feature, however, lies in the face of the scale. It is the face that raises this scale above all others of its type; that will fascinate the mother or father buyer and will impell them to choose this scale from the widest selection possible. No one, who sees it can resist the dimpled, smiling cherubs that are represented on the scale dial romping about its baby blue ground in realistic, mischevious positions.

Supplementing the scale every purchaser is presented with an artistically produced booklet entitled "After My Arrival," with provisions made in its pages for the daily recording of baby's advance in weight, as well as for other entries—of baby's earliest adventures and experiences, giving it a permanent record of development. The booklet is attractively illustrated, bound in covers of quaint originality of design carried out in soft shades of blue, buff, green and black. The inside pages are generously adorned with characteristic poses of baby and its companions in its first days.

Dealers will be supplied by the manufacturers, John Chatillon & Sons, with liberal quantities of these baby booklets, which may be effectively used for counter and window display. The attractiveness cannot fail to draw admiring attention from customers and visitors in their stores. Needless to say, this notice invariably turns unto a purchase, wherever a baby makes its entry into the household of one who has seen this display material. Thus this "thing of beauty is a joy forever" not only for the pleased mother, but for the dealer.

These scales are manufactured in such large quantities that the makers are able to offer them attractively finished as described and accompanied with the booklet at a price which is practically the same as other plain baby scales. This is unique in that it affords the dealer the opportunity to display unusually attractive merchandise and increase his sales without undue effort in arranging displays.

The quality of these scales and the resale profit need scarcely be mentioned, as the established reputation of this manufacturer is the best assurance to the retailer that this scale is no temporary novelty, but one of value and guaranteed quality.

The Bledsoe Tire & Auto Company are among the principal dealers in automobile assessories at Ellensburg, Washington. The company has just moved into a new two-story building with an elegant display room, as well as a large storage space.

## WINCHESTER DEALERS IN CONVENTION

Thousands of Winchester dealers from all over the United States gathered at New Haven, Connecticut last month and received first hand knowledge of the Winchester factory as well as a liberal infusion of the Winchester spirit.

The National Association of Winchester Clubs was organized and among the officers elected the West was honored by the selection of J. M. Campbell, Bowling Green, Mo., as vice-president, and W. R. Slogan of Logan, Utah, as secretary. The first president is C. T. Woodward of Carlinville, Illinois. In the past Mr. Woodward has served the National Association of Retail Hardware Dealers in various official capacities and he is widely known and respected by the trade. J. M. Campbell, retiring president of the National Retail Hardware Association, was made vice-president of the National Winchester Clubs.

Other features of the convention were a complete inspection of the Winchester factories, addresses by experts along the lines of salesmanship, store arrangement, display of goods, sales promotion and general hardware problems. The visiting dealers had the opportunity of becoming acquainted with the history of the Winchester Company, its prospects, its extent, and its various products in detail.

During the convention the entertainment of the visiting dealers was never for a moment forgotten. There were musical programs, evening and afternoon outings on Long Island Sound and special entertainment of the wives of the merchants attending. The sessions closed with a banquet at the Yale University dining hall.

Record breakers for distance among the merchants attending the recent Winchester convention at New Haven, Connecticut, were three far western hardware men. Daniel Kelty of Glendale, California, traveled 3191 miles to attend. Nearly equaling this record were J. E. Serring of Redlands, California, who covered 3133 miles, and W. N. Luby of Wapato, Washington, who came 3108 miles.

## TOWNLEY METAL & HARDWARE CO. DOUBLES PROPERTY

When any institution finds it necessary to double its real estate holdings in a single transaction, the trade will certainly understand something of the progress and condition of such a company. Such a record has recently been set by the Townley Metal & Hardware Co. of Kansas City.

Although the company already had property 142x180 feet in the center of the city, their growing business and the demands of a constantly increasing stock made it plain to the far sighted management that provision would have to be made for a far larger building in the future.

Thus, within the last month four separate pieces of property adjacent to the present building have been bought by the company. The new property measures 142x202 feet, and thus provides the company with practically a square block of real estate, aggregating 60,000 square feet.

It is the plan of the company to erect immediately a two-story building 80x142 feet on the new property. This will give additional space in the present emergency. Next year more stories will be added and the building extended to cover the entire new lot. A six-story building is planned eventually.

## HOW A LAWSON HINGE IS BUILT

Of particular interest to building hardware salesmen and buyers is the announcement of the Lawson Mfg. Company, printed elsewhere in this issue of the HARDWARE WORLD. In this announcement is illustrated in detail the construction of the new spring hinge.

The body of the hinge is a single strip of solid metal. When punched and cut to the proper shape, the strip is bent to form the spring barrels and center web. The two ends fold over, forming the double reinforced center web construction. The ends of the bent strip meet on a diagonal line across the center web. Now, in addition to the two layers of heavy metal, a reinforcing metal plate is also riveted on, making a solid three-ply reinforcement.

The manufacturers point with pride to the fact that the strength of the center web of the Lawson Nu Jamb Spring Hinge is one of the main reasons why it has met with such favor.

## J. H. WILLIAMS AND WHITMAN & BARNES COMBINE ON WRENCHES AND DROP-FORGINGS

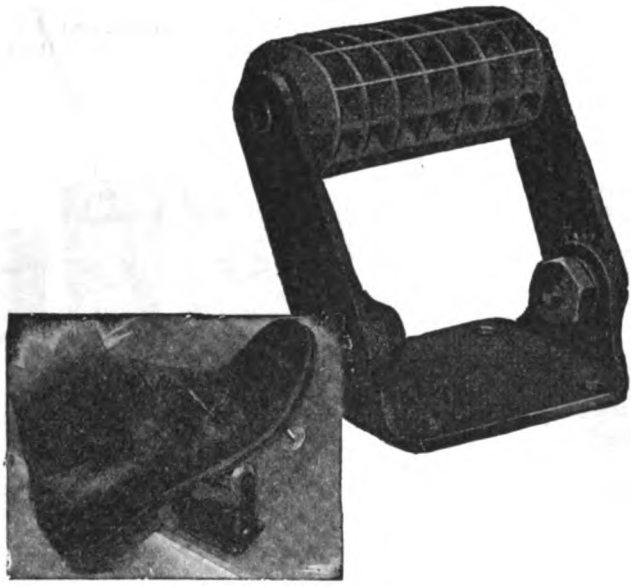
J. H. Williams & Co., at Brooklyn and Buffalo, New York, and the Whitman & Barnes Manufacturing Co., at Akron, Chicago and St. Catharines, Ontario, have consolidated their wrench and drop-forging plants and business. Whitman & Barnes retain their twist drill and reamer business and will continue, as an entirely separate organization and on an extended scale, the manufacture of these tools at Akron, Ohio.

J. H. Williams & Co. have long been known as large manufacturers of drop-forged tools and drop-forgings, one of the first to enter this field commercially. The Brooklyn works employ about 750 persons. In 1914 the Buffalo works, an entirely new plant, began operation; they now employ over 1000 persons and comprise 47 acres with about 233,000 square feet of floor space.

The Whitman & Barnes Manufacturing Company was founded as a partnership in 1846 by Augustus Whitman and Alfred G. Page under the title, Page, Whitman & Co. The Chicago works now consist of 45 acres of land with 320,000 square feet floor space and are connected by private trackage with four railroads. They employ about 800 people. The St. Catharines works are located on the Welland Canal and obtain power therefrom. This business has the distinction of having every jobbing house in the Dominion on its books. About 200 persons are now employed.

Through this consolidation of the four wrench and drop-forging plants—Brooklyn, Buffalo, Chicago and St. Catharines—the geographical ideal for the service of customers has been attained. The merger also strengthens the leading position of the company in the manufacture of drop-forgings and drop-forged tools.

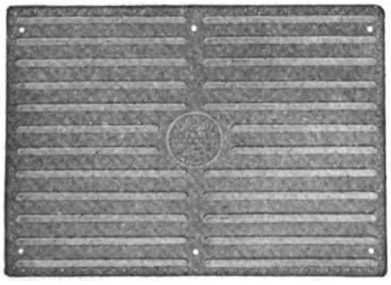
**All W. & B. Energy on Drills and Reamers**



Whitman & Barnes will continue in the twist drill and reamer business, retaining for this purpose its Akron, Ohio, factory, where twist drills and reamers have been made in the past. The entire time and energies of its organization in the future will be directed exclusively to the manufacture and sale of twist drills and reamers.

A new and enlarged plant will be constructed, the plans for which are rapidly developing. When completed, the new factory will be the last word in equipment and facilities for producing twist drills and reamers and will rank among the largest of its class in the country. The present plant facilities are unable to supply the demand for W. & B. twist drills and reamers, and the company reports constantly increasing sales over production.

**Officers from Both Companies**



The business will continue to be operated by those who have been continuously identified heretofore with the business of J. H. Williams & Company and with the Chicago and St. Catharines plants of the Whitman & Barnes Manufacturing Company, the organization being as follows: President and Managing Director, J. Harvey Williams; Vice President, A. D. Armitage (President, Whitman & Barnes Mfg. Co.); Secretary and Treasurer, W. A. Watson; Controller, R. S. Baldwin; General Sales Manager, F. W. Trabold; Publicity Manager, Hugh Aikman.

## A BIT OF WASHING MACHINE HISTORY

Some 15 years ago an effort was made by a well known manufacturer to relieve the drudgery of wash-day by harnessing the city water power system to a washing machine. This was done by the water motor designed especially for that purpose. A number of improvements have been incorporated from time to time that have contributed to the increased efficiency of this labor saving device for the home.

Like nearly every new article put on the market, there was to be found complications and sources of complaint that have been overcome by careful study and continuous experiments. There has been one producer of this type of washing machine that has given their entire time and energy to water motor washing machines. Nothing else has ever been built in their plant and by this concerted effort and close application

Yost Gearless

they have been able to satisfactorily serve many of the largest hardware and house furnishing stores throughout the country.

The name of this manufacturer really needs no introduction to the trade. An illustration of the interior construction of their machine is shown herewith. With this machine, especially built for family use and with all of the old criticisms eliminated by improved features, the product is one which you can safely recommend to your most skeptical buyers. They can be sold to the user at a price that is within the reach of every one and still show the dealer an attractive margin of profit.

Attractive advertising matter has always been furnished the dealer and newspaper service in the way of copy and matrixes will be extended to all dealers. Picture show slides have also been furnished where dealers are using this medium, and the results have been very satisfactory.

During all of the abnormal price period, the most careful attention has been given to the kind of service that dealers appreciate. Through increased production it has been possible to serve our dealers at a comparatively slight advance over the prevailing prices of three or four years ago. It has never been the policy of the producer of this machine to see how cheap the machine can be built, but there has always been an earnest endeavor to use quality in materials throughout, and in every instance only the highest grades of material available have been used in the construction of this machine.

As evidence of the satisfaction dealers and customers are enjoying where this machine has been used, you will be interested to know that many of our largest and best accounts have been selling Yost Washers since the first years of our existence. By close application and a constant endeavor, the Yost Washer has become a synonomous term with Quality and Service.

These machines are manufactured by The Yost Gearless Motor Company at Springfield, Ohio.

---

## SPECIAL GALVANIZED FLOWER VASES

The alert merchant will realize the possibilities in pushing such a line as the galvanized flower vases of the Rochester Can Company of Rochester, New York. They can be sold individually to householders and in larger lots to florists, interior decorators, cemeteries, and in fact to any buyer who desires to preserve flowers in hardy permanent receptacles.

Iron Horse Galvanized Flower Vases are made of heavy gauge metal with extra heavy, water-tight seams. They are hand soldered and the sides are tapered and the top reinforced with a heavy wire. A stripe of red around the top and bottom adds to the finish. At an additional cost of 10 per cent net, the entire outer surface will be painted either red or green. These flower vases come in heights from eight inches to 18 inches and hold from eight to 16 quarts.

---

## ENGLISH CUTLERY MANUFACTURERS LOOKING FOR U. S. CONNECTIONS

One of the leading manufacturers of cutlery and razors in England is looking for wholesale distributors or sales representatives to handle their product in the United States.

The manufacturer will back up the efforts of whoever they secure with proper amount of advertising.

Further information can be obtained by addressing J. Roland Kay Co., 111 West Washington street, Chicago, Illinois.

---

Vim Hardware & Tool Company, 103 Chambers street, New York City, manufacturers of pliers, pincers, chisels, hacksaw frames and blades, wrenches, screw drivers, auger bits, etc., have just published a new, illustrated booklet of interest to hardware and tool exporters. A copy of this booklet will be sent to anyone on request.

## TAMMS' RELIABLE FOUR PRODUCTS

The Tamms Silica Company, with their mines and mills at Tamms, Illinois, and their main offices in the Stock Exchange Building at Chicago, Illinois, believe in confining themselves to a limited number of products and maintaining quality and production efficiency, gaining by specialization. The paint trade and the thousands of hardware dealers whose stock includes paint products have come to know the Tamms Silica Company in connection with their big four: Silver Bond Silica, Danish Gilders Whiting, Golden Yellow Ochre and Natural Gray Ochre.

The merchant and dealer who handles Tamms Silica products is said to deal not only in barrels of dry paint, but also in barrels of quality, satisfaction and profit.

Silver Bond Silica, in particular, is the pride of paint men everywhere. When 25 per cent is added to pure white lead and pure linseed oil, it increases the life of the paint and prevents chalking, peeling and blistering, adding a soft tone and a sanitary finish.

The prices on all Tamms products are f. o. b. Tamms, Illinois, and the company urges the trade to send orders direct. As announced elsewhere in this issue, the Silica as well as the Gray Ochre and Danish Gilders Whiting are shipped 350 pounds to the barrel. Golden Yellow Ochre is shipped 300 pounds to the barrel. Stocks of Silver Bond Silica are carried in New York, Cleveland, Kansas City, Los Angeles, Chicago, and Tamms, Illinois.

## DISTRIBUTING PERFECTION HEATERS

The Cleveland Metal Products Company of Cleveland, Ohio, now has in the far western field a complete sales organization to distribute its Perfection Heater. Included in the Perfection line are heaters, cook stoves, ovens and warming cabinets, and these are, of course, appropriately sold by the hardware merchant, the house furnishing merchant, the department store, as well as progressive plumbing houses.

Branch offices of the Cleveland Metal Products Company are maintained at Oakland and Los Angeles, California; Seattle, Washington, and Denver, Colorado. From these offices salesmen call on the entire trade. R. S. Milligan is regional director with headquarters at Oakland, California. In charge of the Oakland district is H. M. Shiry. Eight men cooperate with him in reaching the trade in Northern California. The Oakland organization is only typical of the extent and nature of the Cleveland Products Company's sales plan.

In charge of the San Francisco territory is one of the strongest boosters and ablest representatives of the Perfection line. He is N. P. White and, although he has quite recently joined the Cleveland ranks, his experience along the lines of salesmanship in building materials and other lines ably fits him for the work that he is now so ably doing for the Cleveland Metal Products Company on the Perfection heaters.

## SIMPLEX SUNBOWL RADIATOR

If you, as a merchant of electrical goods, want an item that will move all winter, that will give satisfaction to the buyer and happiness to the community, just think twice about the Simplex Sunbowl Radiator, manufactured by the Simplex Electric Heating Company, Cambridge, Massachusetts, and illustrated herewith.

The Sunbowl can be attached to any lamp socket and as its name implies it is designed to bring the warmth of summer-time into the house in the cold winter months. The inverted cone-shaped electric heating element and its generous sized reflector make this radiator not only the hottest and most cheerful but also the most economical of them all. It takes no more current to operate than an electric iron or toaster. Children can use the Simplex Sunbowl Radiator with absolute safety in the absence of "grown-ups." Nothing to smoke, smell, explode or catch fire. If tipped over it will always turn face upwards and throw its heat in the air, thereby avoiding danger of scorching anything.

By corresponding with the Simplex Electric Heating Company direct you can find out where the nearest stock of Sunbowls is carried and who the distributor is in your territory. The particular radiator illustrated herewith is Type No. 99, 600 watts.

The dealer's proposition on these radiators is most interesting and the company is anxious to enroll progressive dealers whose stock includes electrical supplies and whose interest is in increasing their trade and their profits on this department of their business.

## ACME FRY PANS TWENTY-FIVE YEARS OLD

The fact that the New York Stamping Company of Brooklyn, New York, has been manufacturing Acme frying pans exclusively for 25 years is guarantee enough of the quality of the product and the stability of the manufacturer.

In fact the Acme steel frying pans have been so popular with the trade and so thoroughly satisfactory that competitors have paid them the tribute of imitation almost from the start. It is for this reason that every Acme frying pan is now stamped with the company's trade mark, "Acme, N. Y. S. Co." This guarantee, equivalent to the word "Sterling" on silver, is stamped on the handle of the pan.

The pans are made in eight sizes and can be secured in two finishes, either polished or unpolished. The smallest pans are only six inches in diameter at the top, whereas the Number 6 or largest size is 12 inches in diameter. One barrel of the No. 00 or smallest size pan contains four gross and weighs approximately 225 pounds. A barrel of the Number 6, largest pans, contains only eight dozen and weighs approximately the same.

A feature of the new Acme pan is the one-piece cold handle.

The New York Stamping Company is represented in the West by the Wm. P. Horn Co., with offices in San Francisco, Portland, Los Angeles and Seattle.

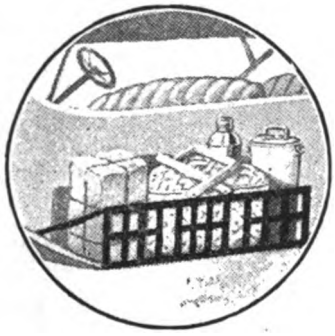
Probably the only hardware merchants in the United States to do business on an island is the Catalina Hardware Company at Avalon, California. One of the main features of their business is dealing in sporting goods, particularly fishing tackle. In addition to their regular line, they are authorized to sell fishing licenses.

## REMINGTON REORGANIZATION INCLUDES CUTLERY LINE

Under the name of Remington Arms Company, Inc., application for charter has been made by the Remington U. M. C. interests in reorganization. The new company will succeed the old in every respect taking over the business of the present company, including the U. M. C. cartridge works at Bridgeport, Conn., and the Ilion Arms Works at Ilion, N. Y., retaining its general offices in the Woolworth Building, New York City. The authorized capital stock of the new company will consist of $10,000,000 seven per cent preferred stock and 1,000,000 shares of common stock of no par value.

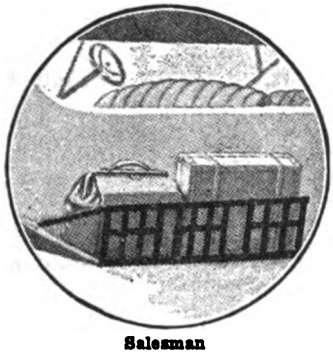
In this change there will be no interruption in the company's business and no change will be made in its management or its well known policies. It will continue the manufacture of Remington arms which have been continuously on the market for 104 years and are in use in every country on the globe and Remington U. M. C. ammunition of all types including metallic cartridges, shotgun shells, etc., which have been manufactured at Bridgeport for over half a century and likewise enjoy a world-wide market. In addition, the new company will continue the development and manufacture, begun about a year and a half ago, of Remington cutlery. These products will be marketed exclusively through jobbing channels in accordance with the company's well known policy of distribution.

The cutlery line was in contemplation and preparations for its development were actually in progress in 1918 and immediately after the close of hostilities active steps were taken for the establishment of a completely new and modern cutlery manufacturing plant to be located in the new buildings at the U. M. C. plant in Bridgeport erected for war purposes. It is not contemplated that Remington Arms Company, Inc., will take over any other companies as it is believed much better progress and a higher grade of product can be made by the use of entirely new and up-to-date equipment much of which has been and is still being built in the company's machine shops and tool rooms in Bridgeport. As a matter of fact, active manufacture of pocket cutlery has been under way for several months and the quality, design and finish now actually being produced convinced the company of the wisdom of its manufacturing policy on this new product.



From time to time the company may engage in the manufacture of other products and as far as may be consistent will confine its activities to lines of product suitable for distribution through the hardware and sporting goods jobbers.

The company's wartime activities made necessary very large expansions of both the U. M. C. Bridgeport and the Remington Ilion Works and these two plants have therefore approximately 200 per cent more manufacturing floor space than was the case previous to the war and the buildings are most modern and substantial and thoroughly up-to-date. There is available at both plants immensely increased manufacturing facilities such as machines, machine tools, power, power transmission and other necessary equipment which will in future be devoted to the manufacture of the company's commercial product and with these additions to its former capacity the company is in a position to supply infinitely greater volume of production of sporting arms and ammunition than ever before.



The official report of Assistant Secretary of War Crowell, director of munitions, gives this company credit for producing at its Ilion arms plant more military rifles than any competitor now in existence and in addition likewise officially credits the company with a production of military rifle cartridges and military pistol cartridges approximately equal in volume to the combined total production of all other ammunition manufacturers in the country, thus apparently justifying the claim made by the company in its advertisements to be the "largest manufacturers of firearms and ammunition in the world."

Side view of the new Voss Sea Wave Washer, cabinet door open. The complete accessibility and sturdy construction of the machine is well illustrated. This machine is painted a light blue green with dark green trimming in tune with its name and the field of its operation.

## NEW VOSS SEA WAVE WASHER

The Voss Sea Wave Washer, an all-metal oscillating machine, which has been in the process of construction for the past two years, is now ready for the market and promises to open the eyes of the washer trade.

Three years ago Voss Bros. spent some $15,000.00 developing a cylinder machine. After making a complete survey of the washing machine field, it was found that the trend of public opinion was not in favor of the cylinder as the ideal machine. Favor was gradually turning towards the oscillating machine as a machine that would produce the best results with the least wear and tear on the clothing, and the most practical machine. The company immediately discarded all the patterns and jigs that had been made for the cylinder machine, and commenced working on the present oscillating machine.

This new machine has been thoroughly tested in different homes throughout the country. These have been out in some homes as long as six months, washing every week, and they are all giving splendid satisfaction. It has always been Voss Bros.' method to be absolutely sure what they have before placing it upon the market.

Voss Bros. are calling this machine the Voss Sea Wave Washer, as the action of the water in the tub makes an actual figure eight when in operation.

The tub on this machine is perfectly smooth on the inside. Instead of raised portions or pieces of metal in the bottom of the tub to produce the action, it has a curve at the top of the tub which produces the action desired. Thus the tub has nothing in it to wear or rub the clothing.

In material and construction the tub is novel. A copper, tin-lined tub on the inside is the basis. Then there is an insulating jacket around this copper tub of two layers of fiber material. On top of this fiber material is another piece of heavy tin metal. This is said to be an absolutely new feature on any washing machine.

### Principle of Thermos Bottle

Like a thermos bottle it keeps the water hot for at least five hours, sufficiently hot so that anyone can wash in the water at the end of five hours. Thus is overcome the common objection against the ordinary metal tub, in that it cools the water too fast. This is a feature which dealers who have seen the machine state is an excellent one, one which is bound to result in many sales for this machine.

Another prominent feature on this machine is the absolute safety throughout. The door of the cabinet is hinged half-way down with a spring hinge. In case anyone gets their hands between the tub and the door the door will automatically open without damage to the operator.

The open door in the illustration shows easy accessibility to every part of the machine. The mechanism is very simple, and the strong two-inch angle iron frame and the supports throughout are typical of its solid, sturdy construction.

The manufacturers claim for the new Voss Sea Wave Washer that it will wash clothes better than any other machine, that it is absolutely safe for anyone to operate —that it is convenient and easy to operate, and that it is a good-looking machine, but at the same time practical, and not of the "Victrola type."

This machine will be built in the new Voss factory which will be completed this Fall. Thus the company is sure of full production on this machine not later than November 1st, of this year. Voss Bros. are also erecting a new foundry. All of the material is on the ground, the cupola, etc., have all been set, ready for work.

## HOCHHEIMER & CO. SUFFER FIRE

In a fire which destroyed two square blocks of the main business section of Willows, California, the hardware and implement business of Hochheimer & Company was among those lost. Hochheimer & Company are among the largest and most influential merchants in Northern California and Manager G. A. Gutman of the hardware department is at the present time president of the northern division of the California Retail Hardware and Implement Association.

## HOWARD FURNACE CHIEF ON TOUR

Donald B. Howard, president of the Donald B. Howard Heater Company of Des Moines, Iowa, is one of the manufacturing chiefs who took advantage of the early summer weather to visit his far western connections. During his visit in San Francisco he spent several days with his Pacific Coast representatives, The Joe Hays Company, making plans for more operations for the coming year.

The Donald B. Howard Heater Company is known to the trade as among the largest manufacturers of wrought iron furnaces in America. Mr. Howard's keen personality, his insight and knowledge of the furnace business and his organizing ability have built up a plant in six years which represents a half million dollar investment. Howard furnaces are now sold in twenty-six states and exported to foreign countries. Among the wrought iron furnaces manufactured by the company are the Life-Saver Pipeless Heater, their type "C" Ideal Wrot Iron Heater with a ten year guarantee, the Power-Plus furnace for churches and large installations and other heating devices of all sorts. In a word, the Donald B. Howard Heater Company have a deserved reputation as live, wide-awake manufacturers, hot on the trail of business and progress.

Arrangements have been made with the Joe Hays Company of San Francisco to carry a complete stock at all times to supply the growing demand.

The H. I. Company at LaCrosse, Washington, has found it necessary to add a new tile building 25x100 feet to its present plant to provide a new display room. John Neiertz, the proprietor, is in charge of the new construction and is looking forward to the time when he will have sufficient room to display the stock which the company now carries.

## A HARDY CAMPING OUTFIT

John E. Hardy has made more than one contribution to the progress of the western hardware trade. He has been especially notable for his masterful window trimming for the Honeyman Hardware Company, at Portland, Oregon. Now, however, Mr. Hardy assumes a new role as the inventor of a combination running board box, and we take this opportunity of calling the attention of the western trade to a full announcement of the Hardy Combination Box elsewhere in this issue.

Not only are we interested in the item because it is a practical automobile necessity, because it is manufactured in the West and because we have a weakness for camping and particularly for automobile camping ourselves. More than through any of these causes, we are interested in the item because it is the invention and product of John E. Hardy. Mr. Hardy is one of the most loyal men we know in connection with the hardware trade and at the same time one of the keenest students of the selling of hardware.

Many merchants who handle automobile accessories will be glad to include in their line an honest, useful product, one that will appeal to the buyers and fill a genuine need and want. In doing business with Mr. Hardy, any member of the trade may be sure of the most honest, straightforward treatment and of personal interest and cooperation. Even though the camping season may be well along before this announcement appears before our readers, we cannot urge too strongly that they get in touch with Mr. Hardy regarding next year's orders.

When brains combine with hardware experience and when the combination is backed up by strength of character and the most upright business dealing, only satisfaction and progress can result. On these grounds we cannot recommend too strongly to the hardware and automobile accessory trade a further investigation of Hardy's Combination Running Board Box as a specialty for next season.

## REPRESENTS CLARK EXPANSIVE BIT

The Superior Mfg. Company of Gloucester, Massachusetts, announces to the trade that henceforth they will be represented in the western territory by A. C. Riddell, and we would venture it as our opinion that mutual congratulations are in order.

The genuine Wm. A. Clark Expansive Bit is well known to the trade. It is the claim of these manufacturers that all other expansive bits are patterned after the old original Clark. The bit comes in two sizes, the smaller one with two cutters boring from ½ to 1½-inch hole, while the larger one has two cutters boring from ⅞ to a 3-inch hole.

The Superior Mfg. Company also makes a line of cutters for expansive bits fitted for boring holes from ½ inch to 5 inches.

A. C. Riddell may be reached at his office, 866 Higgins Building, Los Angeles, the general headquarters for the western territory. In charge of sales in Northern California and the Northwest will be Earl Jones, who is at the present time calling on the trade.

The Gill Piston Ring Company of St. Louis has opened a direct factory branch at Helena, Montana, under the direction of D. F. Griff. From the Helena office will be handled the states of Montana, Wyoming and as far east in the Dakotas as Fargo. Helena, Montana, is becoming a great automobile accessory distributing point as well as a center for hardware distribution in the northern and intermountain sections. Mr. Griff was originallv a native of Portland, Oregon, and has spent four years traveling for the Gill Piston Ring Company. The initial stock consists of 2,000 rings.

The Lucas-Perley-Hanna Company at Tensed, Washington, has purchased the store of Geo. Merriman at Tekoa. The stock will be merged with that of the buyer.

## NEW COLUMBIAN CORDAGE CATALOGUE

A new catalogue which they believe to be better arranged and more convenient to use than any other cordage catalogue ever before published, is being sent out by the Columbian Rope Company of Auburn, N. Y.

The rope and twine products are grouped according to a new plan, which places, so far as possible, all the products of a certain type in a section alone, no matter what fibre they are made of. In this catalogue will be found the answer to almost any question a customer may ask concerning rope or twine, from the raw fibres to the finished product.

The Columbian Rope Company offers to send these instructive catalogues, free of charge, to all persons interested in cordage on receipt of request.

## LOWELL SPECIAL WRENCH LINE

For dealers who want particular wrenches for particular people and who supply machinists and technical artisans, an investigation of the wrench line of the Lowell Wrench Company will be well worth while. Located at Worcester, Massachusetts, this company is among manufacturers noted for their special line of wrenches. They largely sell special orders of specially designed wrenches to single customers. The company, however, does turn out a line of wrenches described in their catalog of reversible ratchet wrenches for bridge builders and for work with lag-screws, etc. Both the handle and adjustments in the head fit these wrenches for particularly difficult operation and special work. The company also manufactures ratchet drills, boiler ratchets, drilling posts and improved hand and jewelers' pin vises.

## $100,000 ARIZONA ACCESSORY FIRM

The Saufley Rubber and Accessory Company has been organized at Phoenix, Arizona, with a capital stock of $100,000. They do a state wide business in Arizona, particularly in the Salt River Valley. The company will handle the Mohawk Tire in particular but will also carry a full line of accessories including the Rirometer, Given beadless tire and a few other specialties. Service will also be made a feature of the business policy of the company. The officers are Henry J. Sullivan, president; A. John Frey, vice-president, and J. D. Sullivan, secretary and treasurer.

## ELLIS PARKER BUTLER WRITES OF GARDEN HOSE

"Millingham's Cat-Fooler" is the title of a new little story by Ellis Parker Butler. His fame was made when he wrote that classic of humor, "Pigs Is Pigs." Mr. Butler's new classic treats largely of garden hose. Because of the humor of the story and because of the fact that garden hose is so important in the telling, the Boston Woven Hose and Rubber Company of Cambridge, Massachusetts, has secured permission from Mr. Butler to reprint the story, and it has been published in a most attractive booklet form by the company.

Some of the truths that can be derived from the comical story illustrate the wisdom of republishing it.

"Don't borrow garden hose of your neighbors; buy a hose for yourself." "Don't try to deceive your friends; you will always get found out." "Don't make the mistake of thinking all garden hose is alike."

Members of the trade will readily appreciate that these generalities, when applied particularly, may be made to refer to the various brands of hose, including "Bull Dog," "Milo" and "Good Luck," manufactured by the Boston Woven Hose and Rubber Company.

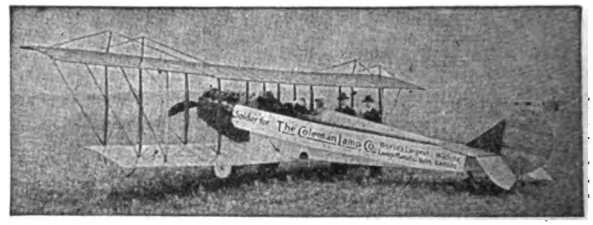
Supplementing "Millingham's Cat-Fooler," the company has also published a little booklet entitled "The Truth About Garden Hose," in characteristically clever, Boston Woven Hose style. Any dealer's library and home reading table will be enriched by either of these booklets and the company will be pleased to forward them on request.

## DEMAND CONSTANT FOR BASSICK CASTERS

Among the great eastern manufacturers who are working overtime to keep up with their orders and making every effort to put their production on such a basis that they will be able to take care of the demand is the Bassick Company, with general offices at Bridgeport, Connecticut.

In speaking of the demand for Universal Casters, Eugene C. Saul, western representative for the Bassick Company, points to the fact that although the Universal line had been reduced one-half as far as assortment goes, every other size having been eliminated during the war, still it is impossible to keep the production up to the demands of the trade.

Although some orders are handled promptly and deliveries made within 30 to 90 days, in some cases orders for certain items have been many months in coming, due to crippled production conditions and the delays in transportation which all manufacturers, distributors and merchants are subject to.



With these facts in view, merchants will do well to anticipate caster requirements early for the coming year, just as a like policy in all ordering will assure a complete stock.

## NEW HIGH GRADE NIPPER LINE

Those interested in a nipper line of the highest grade that modern inventive genius and manufacturing perfection can attain will be interested in the announcement of the new line of the United Die & Tool Company at Newark, New Jersey, for which W. H. Wilburn is western sales agent.

These new nippers are for the most exacting and technical users. While they have only been on the market during the last year, they were perfected after two years of experiment and so are thoroughly tested and tried. They are made of 60 point carbon steel, highly polished, and designed for the most exacting requirements. There are about a dozen patterns in the complete line.

Mr. Wilburn reports that it is possible to make delivery on these goods at the present time. Those interested in high grade nippers should communicate with W. H. Wilburn, Williams Building, San Francisco.

## COLEMAN LAMP COMPANY USES AIR EXPRESS

Neither highways nor railways are fast enough in transportation facilities to meet the needs of the Coleman Lamp Company of Wichita, Kansas. Science, of course, tells us that light is one of the fastest travelers known to the human mind, and we suppose that those in the light or lamp business are exposed to the contagion of speed and are dissatisfied with ordinary means of travel.

At any rate, recently the Coleman Lamp Company was threatened with a tie-up through a shortage of solder. A rush order was placed at Kansas City for 100 pounds of solder. In order that no delay should occur, arrangements were immediately made to make the shipment by airplane. The shipment was packed in the passenger cockpit of the airplane, on the fusilage and wherever a few inches of space could be secured. Altogether the trip took about four and one-half hours and attracted great attention both in Kansas City and Wichita, being the first commercial airplane shipment ever made into Wichita.

The incident is altogether typical of the enterprise and resourcefulness of the Coleman Lamp Company. Those merchants who handle Coleman lamps will be proud to know that perhaps the solder used in the very manufacture of the lamp on the shelf was part of the shipment rushed by airplane to keep the trade supplied.

## A FAIR AND HONEST DAY'S WORK

Do you do a fair day's work for what you receive? Would you be willing to pay someone else the same amount that you are receiving for the work you do? If so, then you can honestly answer the question.

Your employer's ability to pay you well depends upon your cooperation and willingness to increase your production so he will be justified in doing that.

No matter how small your task, or how apparently insignificant it is, make the most of it, give it your best attention, bear in mind that it will not escape observation.

**Make a Pleasure of Your Work**

If you treat it as a game and try to excel previous records, you are in a fair way to make a success. Check up yourself and ask if you are worth more to yourself and your employer than you were six months ago.

If you are not you are cheating yourself and your family, even if you are not cheating the man you are working for.

If you are not as productive as you should be find out the reason why.

Do you admit that you have reached the limit of your productive capacity? Is there not some way that you can produce more, be worth more and earn more? Feel free to make suggestions, any employer is glad to have the benefit of your suggestions, as to ways in which business can be made more productive, economies effected, work made more satisfactory to everyone.

---

Many times the heaviest part of our daily load is the imaginary ills and hardships which we are carrying. It is astonishing with what tenacity many people cling to possessions which have a negative value.

---

Why is it that most people spend a good share of their lives getting together belongings which are only a burden after they have acquired them, and the initial cost of which would give them greater comfort and pleasure if it were invested at six per cent interest?

---

"A short temper and a long head rarely go together."

## FINANCIAL SUCCESS IS DANGEROUS

(Copyright by Napoleon Hill)

Financial success brings power, and power is a dangerous thing to those who have not learned how to use it justly and wisely!

Great financial power has a decided tendency to develop intolerance and disregard for the rights of others.

When you begin to succeed financially you will need to watch your step more closely than ever before.

Financial success too often smothers the finer impulses of the human heart, and leads a person to the worship of the god of Mammon!

It is the exception and not the rule when a man who accumulates great financial power without having tasted liberally of the dregs of poverty, uses that power wisely.

Real success cannot be measured in dollars! It is something which can be measured only by the quantity and the quality of service which one renders for the good of others.

If financial power takes away the desire to render useful service, then it may be properly interpreted as failure instead of success.

We do not know for sure, but we strongly suspect that the only real success is that which brings happiness to oneself and to others. We also suspect that the only sure means of attaining happiness is through some sort of useful service which helps others to find happiness. Financial power doesn't always do this.

Watch your step as you begin to accumulate more money than you need for your daily use. Take care that it does not blind your eyes to the one sure pathway to real success, which is the performance of useful service for the good of humanity.

---

If top-notch effort yields you no happiness, there's something wrong either with you or your efforts. Sit down and do some analyzing.

---

Don't worry about how much ability you have, just get busy with the little you have and use it right.

---

If the conduct of our neighbors or friends don't suit, just remember—it's none of our darned business anyhow.

# Babe Ruth and Pacific Plumbing Fixtures

The first home run that Babe Ruth made didn't cause a ripple in the athletic world. But when he got into the habit of pounding out a homer nearly every day it didn't take long for him to become the hero of every baseball fan.

The first advertisement of Pacific Plumbing Fixtures didn't ruffle the surface of the plumbing fixture field. Month after month and year after year of advertising, however, brought Pacific Plumbing Fixtures to first place in the minds of hundreds of thousands of people on the Pacific Coast.

## WOMEN DELEGATES FEATURE WASHINGTON PLUMBERS' CONVENTION

Perhaps the outstanding feature in connection with the recent convention of the Association of Master Plumbers of the State of Washington was the large attendance and active interest of the women. From this it might be inferred that women plumbers are becoming quite the rule in the State of Washington. Although their interest and their activity were manifest in every meeting of the convention, we believe we are safe in saying that their interest in plumbing affairs was for the sake of their husbands, brothers and sweethearts rather than as their own enterprise.

A goodly attendance of delegates from all over the state were present and they showed their interest by attending all of the sessions of the convention. A special feature of the convention was the presence of Wm. J. Woolley, representing the Trade Extension Bureau of the Plumbers' Association.

One of the most interesting features of the convention was a lantern slide exhibit in connection with an address by A. M. Goddard, the treasurer. Mr. Goddard was one of the founders of the association. His address covered the various conventions for the past twenty-five years and the pictures were collected by him during his faithful attendance. Of course, many of those who were present were pictured in the snapshots of former conventions.

The present officers were reelected for the ensuing term and are as follows: President, P. J. Lavan; vice-president, Geo. C. Clark; treasurer, A. M. Goddard; secretary, B. M. Richards. The executive committee consists of James Griggs, E. H. Norton, E. M. Mellen, G. H. Southerland, James Smyth, R. M. Westover and Jerry J. Ward.

A "close up" of the Bremerton delegation indicates that pleasure was liberally mixed with business in the convention and that there was a genuine joy in meeting the fellow plumbers and fellow plumbers' wives. In the center is a portrait of Mrs. A. B. Gehri, president of the Tacoma Ladies' Auxiliary, who was active at all sessions of the association and whose efforts and hard work greatly contributed to the success of the convention.

An indoor view showing the refined atmosphere that was typical of the convention of the Washington Association of Masters Plumbers. Of course, this is only a portion of the delegates who attended the twenty-fifth annual convention and shows the earnestness as well as the homelike surroundings of the convention.

## WHAT VISION MEANS TO THE WORKER AND TO THE WORK

The clearer and more direct we can make the connection between the energy expended by a worker and the results to be accomplished by his work the more interest will the worker take in what he is doing and the more satisfactory will be the quality and the quantity of his production, says a writer in Valve World.

In one of the technical schools—an institution of country-wide repute—we watched a lad of some eighteen years putting the finishing touches on a brass garden-hose nozzle. He had worked on it from the casting to the burnishing. We complimented him on his craftsmanship which was uncommonly good, and asked: "What is going to be done with that nozzle now that it is finished?" "Oh," he answered, "I suppose it will be looked over by an instructor, credited to me somewhere in a book, and then scrapped, melted over perhaps to make a casting of another nozzle."

All look of interest had gone from his eyes with the last word he spoke, and the pleased expression that followed our praise of his work was replaced by something that most plainly said: "What's the use?"

### Have You Not Seen This in Your Own Son?

Within a few days we were in a school where a man with a vision of what might be done with boys and girls at an early age outside of conventionally accepted lines of education, was making his vision apparent with a hundred odd subjects ranging from three to sixteen years of age. In the manual training room we watched a lad of about eight working most industriously on a little bench or stool.

He paid not the least attention to anything but his own somewhat crude efforts at carpentry, and we had to touch him on the shoulder to make him look up enough to answer our question. We said: "I suppose that when you get that nice little bench finished it will be all broken up so that the wood may be used to make something else?"

His answer was emphatic and illuminating: "Well, I guess not. That is for my little sister to sit on up in kindergarten." And he resumed his labors with new vim.

### Interest Lies in Imagination

Interest in one's work comes chiefly, in fact almost solely, through the imagination. In the first incident related there was no apparent connection between the amount of energy and skill devoted to the making of the nozzle and its ultimate purpose, or interest was wholly blocked by the reflection that the purpose was not at all adequate to the expenditure. If that youth had known that the nozzle was going to be put on the end of garden hose and that it was to be used in sprinkling water where many beautiful and useful things might grow, his interest would have been keen, his energy better directed and his skill more apparent.

The lad who was making the bench knew not only what he was doing but he knew that his bench was going to serve a useful purpose. This knowledge appealed to his imagination. He could see his sister sitting on it, and affection for her gave zest to his fancy as he let it play while the tools fashioned what might be called up to that time his masterpiece. The connection between his effort and its ultimate object was clear and distinct and unbroken. He was making a better bench and making it in shorter time than he would have done in almost any other circumstance.

### The End Crowns the Work

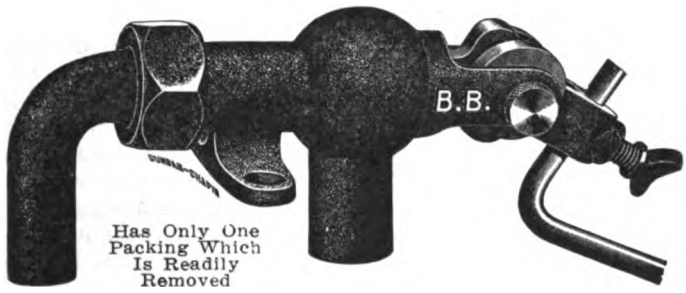
We may apply our homely illustration to practically every phase of human endeavor, whether it be of brain or brawn. To get the best out of the worker we must enlist his interest, and to do this we must appeal to his vision, his imagination. Not only must he be able to see clearly and unbrokenly the connection between his thought and his expenditure of energy and its ultimate purpose, but he must be enabled to see in his own effort simply a part of a larger effort.

His own labor, no matter what he may be doing, is not something detached. It is a part of the labor of those about him, a part of the labor of every other person in the world. As part of a tremendous whole it never can be insignificant, never should be slighted, never should be done indifferently.

The end crowns the work, said the ancient Latins, and one of our poets has put this thought in graceful words as he looked over the results of some of that ancient handicraft:

> In the elder days of art
> Builders wrought with greatest care
> Each minute and unseen part;
> For the gods see everywhere.

Those artisans and artists of an older day had vision. If they could not work with a clear vision of the purpose to which their efforts were to be put ultimately, they worked with the belief that the eyes of the gods were upon them. They slighted nowhere any part of what they were doing; seen or unseen to mortal eye, it would be seen of the gods.



### Make Your Craft a Religion

Why cannot we put some of that olden-time vision into our tasks of today? The ancient gods of Greece and Rome may have passed with the passing of the peoples who believed in them, but there still are gods and they still see everywhere. We have, for instance, the gods of Fancy, of Imagination, of Invention, of Satisfaction, of Excellence, of Co-operation and of Co-ordination. These, insofar as we are concerned individually, see everywhere, and it is well worthy of our best efforts to win their approval.

To dig a ditch, while the God of Fancy lays a pipe in it and runs something through it, while the God of Imagination watches that something ministering to the comfort or profit or happiness of others, while, perhaps, the God of Invention is busy devising some improvement either in method or application, is to raise ditch-digging to the dignity of an art, and to make of the ditch-digger one worthy to sit in the councils of those who plan and who make the most intricate and most useful things that men fashion or need or desire.

**No Man Works to Himself Alone**

That is an impossibility. No matter what he may be doing his thought and his effort have some effect on others. His own effort not only is dependent on the efforts of others, but others are dependent on his. One in a comparatively insignificant place, may hold back the efforts of hundreds of his fellows, or he may advance their efforts. And the more vision he has, the more opportunities given to him for seeing the connection between his own expenditure of energy and skill and the whole result of his efforts the greater will be his vision, the better the quality of his labor and the greater his individual output.

**How to Get the Vision**

This greatly to be desired combination of work and vision is not difficult to secure. It requires simply thoughtfulness, sympathy, co-ordination—planning for united effort—and co-operation — putting united effort into its most effectual play.

Those who lay out work for others can take those others into their confidence, tell them something about the work to be done and the results to be accomplished by it. And those who do the work, knowing something of the ultimate results of their labor, will find vision inciting interest and interest spurring to better and greater effort.

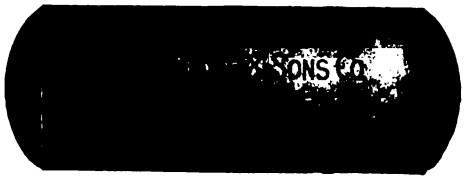
When you give a man a job, tell him all you can about it, especially about the importance of his individual effort to the whole transaction. Give him a chance to picture where his work is going and what it is going to do after it has left his own hands. Never by any chance let him get the impression that his work is unimportant.

Try to make him feel that no one but himself could do that particular bit of work as well as he, and that if he does not put his best into it, the result of his slighting or indifference will be seen all along the line and the ultimate result will be less satisfactory than if he had kept in mind the thought that the gods see everywhere—his gods, the gods of Imagination and of Satisfaction and of Co-operation.

Responsibility for the awakening of this much needed vision, this combination of imagination and effort, lies first of all with those who plan work for others, and our appeal is made chiefly to them. We never yet have found a worker, no matter how apparently humble his labor, whose interest could not be enlisted and whose effort could not be increased through the awakening of interest.

We sincerely believe that the response to the effort necessary to invite interest and to bring vision into play would be prompt and filled with abundant promise. We believe that friendly, instructive, inviting, encouraging co-operation between those who plan the work and those who do it would result in making of the industry of this country the most harmonious and the most effective the world ever has seen, and that both the quality and the quantity of our production would be measurably enhanced and increased. At least the probable outcome would more than repay the necessary effort.

Two views that are typical of the growth of the Washington Association of Master Plumbers and show the record of twenty-five years. Above is shown the delegates who attended the first convention at Tacoma in 1895. Below is shown a group of delegates to the convention held in Seattle in 1910. This shows the growth of the association in fifteen years. These two views are selected from the many views which were given in Mr. Goddard's illustrated address at the convention.



The Veterans' Plumbing Company at 528 Bastion Square, Victoria, B. C., has been organized by C. Ballam who has been a leading plumber in Victoria, B. C., for many years. Mr. Ballam entered the war along with the other patriotic members of his community and the name of his new institution is somewhat reminescent of his war experiences.

E. W. Phillips has established a plumbing shop at 3724 Stephenson Avenue, Los Angeles. Mr. Phillips is an experienced plumber and should surely find success in his new venture.

## W. P. COLLINS TOOK GREELY'S ADVICE

It is not often that we are able to introduce to our readers manufacturers of hardware in the West. The rule of growth and development in the hardware business has been that the producing was done on the eastern seaboard or round about the Great Lakes, whereas the Western half of the United States and particularly the Pacific Coast, has been a distributors' territory, where the product is sold and where little manufacturing takes place.

### Ohio Developed Him

W. P. Collins, President and Manager of The Western Brass Company at San Francisco is one of the very few hardware manufacturers west of the Rocky Mountains. Yet the far West can not claim complete credit for Mr. Collins. He is a native of Ohio and moved out into the West some 15 years ago when he had finished his schooling and was ready to enter the business world.

Gravitating to San Francisco soon after the fire of 1906, his first connection with Western manufacturing was in a plating works. Rapidly working into the business and the company, after four years he found himself manager and established the Western Brass Company. At first, the main business was in brass casting and general foundry work, but in the 10 years of the company's life an extensive line of brass hardware and plumbing fixtures have been developed.

Among the hardware specialties are spring hinges, casement fasteners, and a special line of door handles. All of these items are specially manufactured from the company's own dies and designs and are becoming well known to the Western trade. Among the items in the plumbing line are standards for marble partitions, and ball cocks.

The Western Brass Company line is carried to the Western trade through D. Edwin Harris, traveling representative. It is the policy of the company to sell through the jobbing trade, and situated on the Pacific Coast they are able to make prompt shipment by either rail or water. Aside from its standard lines, the company is ready at any time to turn out special work in castings, plating and general brass foundry work. In recent years a considerable business in manufacturing automobile accessories has been developed and the plant is ready to handle all orders for specialty manufacturers along this line.

The company will be pleased to forward full information, together with prices, on inquiry to its main offices at 217 Tehama Street, San Francisco.

## PASADENA PLUMBERS ON OUTING

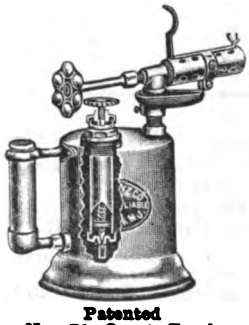
Two hundred master and journeyman plumbers of Pasadena took advantage of the natural blessings of Southern California to hold their annual reunion at Redondo Beach last month. The day was spent in sports and picnicking on the beach and in social visits by the plumbers and their families.

The officers of the Master Plumbers Association of Pasadena are as follows: Wm. F. Creller, president; A. R. Benedict, vice-president, and George Richardson, secretary.

## NEW BUFFALO FORGE LITERATURE

The advertising department of the Buffalo Forge Company of Buffalo, New York, have certainly set a record for production. In the last month or so they have issued to the trade two catalogues and a bulletin, each of which would do credit to an advertising department of any manufacturing institution.

A general heating and ventilating catalogue of 116 pages covers the Buffalo line completely and brings the models and specifications right up to date. Supplementing this is the Conoidal Fan catalogue of 64 pages. Special bulletin No. 721 is devoted to dye house and bleachery ventilation, and while going to a special field will be all the more valuable for its completeness. One feature of the bulletin is the publication of photographs of actual installations of Buffalo equipment in dye houses, together with a list of the cotton, wool and silk dye houses and bleachery now using Buffalo equipment. There are now twenty-six such factories listed as thoroughly equipped with Buffalo apparatus.



## PORTLAND STOVE WORKS REBUILT

It took Portland Stove Works at Portland, Oregon, just three months to entirely recover from the fire that recently destroyed its old plant. As a result, a modern factory has been erected and all of the patterns and equipment necessary for making the company's line have been fully restored. The new works also include a complete enameling plant.

A. J. Eberhart, the enterprising plumber at North Bend, Oregon, is showing his community that he is right up to the minute in business methods by carrying his plumbing shop on wheels. He has purchased a new car, and thus has his complete equipment with him to carry to any part of his large field of activity.

Spiersch Bros. are proprietors of a new plumbing and sheet metal shop at Richmond, California.

## MEYER S. RUBENS OPENS PLATING WORKS

Meyer S. Rubens, who has long been known throughout the Northwest and the West for his stove and furnace repair service at Spokane, Washington, has added complete equipment for gold, silver, copper, nickel, bronze and brass plating. With his new plant, he is also equipped to do galvanizing and tinning.

This announcement will of course be most welcome to the trade, for it will mean the saving of time as well as money to have facilities for plating, polishing, galvanizing and retinning near at hand. The possibilities and scope of work to be done at the new plant are almost unlimited. Whole hardware stocks, electrical fixtures, silverware and the like can be made over new. Tin goods can be retinned either for customers or direct from stock, when tarnished or damaged.

Any polished metal surface can be renewed in connection with the automobile accessory trade. Along the lines of silver and gold plating, all manner of instruments for professional men, all sorts of silverware, such items as band instruments, etc., can be replated and be made as good as new. In fact, the five generators and dynamos which are now installed in the Meyer S. Rubens' plant are equipped to put a new finish on any manner of metal part or instrument.

With manufacturers behind in their orders, with the cost of manufacture and foundry work as high as it is, with transportation facilities to the eastern manufacturers tied up, the trade of the West will indeed be glad to know that they can secure this service near at home. We look to see genuine interest and well merited activity, centering in the Meyer S. Rubens' metal renovatory at Spokane, Washington.

# Retail Selling Prices

The following are the present market retail selling prices of merchants in some of the large cities. At the request of many merchants in smaller towns and cities who do not have the opportunity of checking up their prices often, we revise these prices each month. In communities removed from the larger cities, transportation charges would of course be added. As the overhead expense of a retail business in any part of the United States ranges from 20% to 25%, many merchants use these prices to save time in figuring their own. We will be glad to receive suggestions and corrections as to any prices quoted herein and any items not mentioned.

# New Ladd's Discount Book No. 3

A new and enlarged edition of this standard work, comprising the most comprehensive collection of discounts ever printed, as well as many other valuable computations for commercial purposes, is now ready, after months of preparation by the compiler and editor, William J. Ladd.

Is one of the greatest time and labor-saving productions of the age. The net of any amount at any discount can be obtained in a second. The calculations have all been carefully checked. No proving is necessary. It is invaluable for pricing and checking invoices, figuring inventory, making prices, figuring profit, etc. Note the equivalent discounts. Are they worth anything to you?

It contains more than 300,000 Computations including New Discounts and Combinations which have come into use within the last few years. Nearly 600 pages, all double indexed.

60, 10, 10, 7½ & 2½. Same as { 55, 20, 10, 7½ & 2½. / 50, 20, 10, 10 & 2½. / 40, 40, 10, 7½ & 2½. / 40, 35, 10, 10 & 7½. / 40, 33⅓, 10, 10, 7½ & 2½. / 40, 35, 20, 10, 7½ & 2½. / 37½, 20, 20, 10, 10, 7½ & 2½. / 35, 25, 20, 10, 10 & 7½. }

The section above shows a part of a page of the book. There are six tables on a page. Put your finger right on the net the hand shows: The net of 73 cents is 21 cents, $7.30 is $2.13, $73.00 is $21.33, $730.00 is $213.31, $7,300.00 is $2,133.11.

## OTHER USEFUL TABLES

**Net of One Dollar** showing all discounts arranged numerically, with different ways given for their application.

**Per Cent Profit.** Tables for adding percentage, affording an accurate and rapid way of making prices with profit added.

**U. S. Money Into Foreign Money and Reversed.** Pounds, marks, francs, kronen, etc.

**Numerical Arrangement of Figured Nets** brings the different nets together numerically and increases the value of the other tables.

**Twelfths of a Dozen or Gross.** These tables, arranged on the plan of the Discount Tables, give the price of fractional parts of a dozen or gross.

**600 Pages. Double Indexed. Size, 8 x 11 inches. Cloth. Price, $10.00, Including a Full Year's Subscription to the HARDWARE WORLD.**

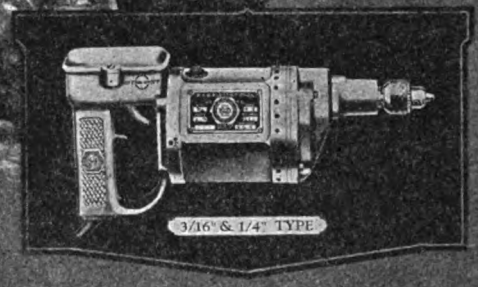
# BLACK & DECKER

## PORTABLE ELECTRIC DRILLS

*"With the Pistol Grip and Trigger Switch"*



EVIDENCE

The American Motors Corp., Plainfield, N. J., builders of the well-known American Six automobile, find the Black & Decker Baby Drills (3/16" and 1/4") ideal for their body fitting and general assembly work.

L. P. Rife, Production Manager of the American Motors Corp., says:

"We are using Black & Decker Portable Electric Drills because they enable us to accomplish most economically the accurate work demanded by the high standards we have set in manufacturing a quality car."

The reasons for this are the unusual power of these Drills, their ability to stand up under severe usage, light weight, nice balance, and ***"The Pistol Grip and Trigger Switch"*** control.

# DISSTON

## TOOLS FOR THE MOTORIST AND MECHANIC

Sell the autoist and mechanic **good** tools—or it is better not to make the sale.

Few workers subject their tools to as great a strain as do the mechanics working on automobiles and engines. A poor tool simply will not do the work; if you sell that kind, the result is dissatisfied customers.

The dealer who sells Disston tools makes two profits—he builds up his trade through satisfied customers and gets a quick turnover.

Have you seen the new Disston "Kleen-Spark"—a double tool in one piece, handle covers over each end, one end a magneto file, the other end a knife blade—for cleaning spark plugs? A very compact, efficient tool not much larger than a pencil—a tool that the motorist has long been calling for.

Do you know about the Disston 38 Screw Driver—"the strongest driver made"? And the Disston machinists' and bearing scrapers? And the Disston hack saws and blades?

The Disston Magneto Files are **real** files; carefully and accurately made of high-grade Disston Steel made to "stand up" to the work for which they are intended.

These tools are all of the same high grade steel and workmanship that has made the Disston Hand Saw the quality standard of the w rld.

Ask your jobber or write to us for complete information.

Look for the G on all cast iron fittings

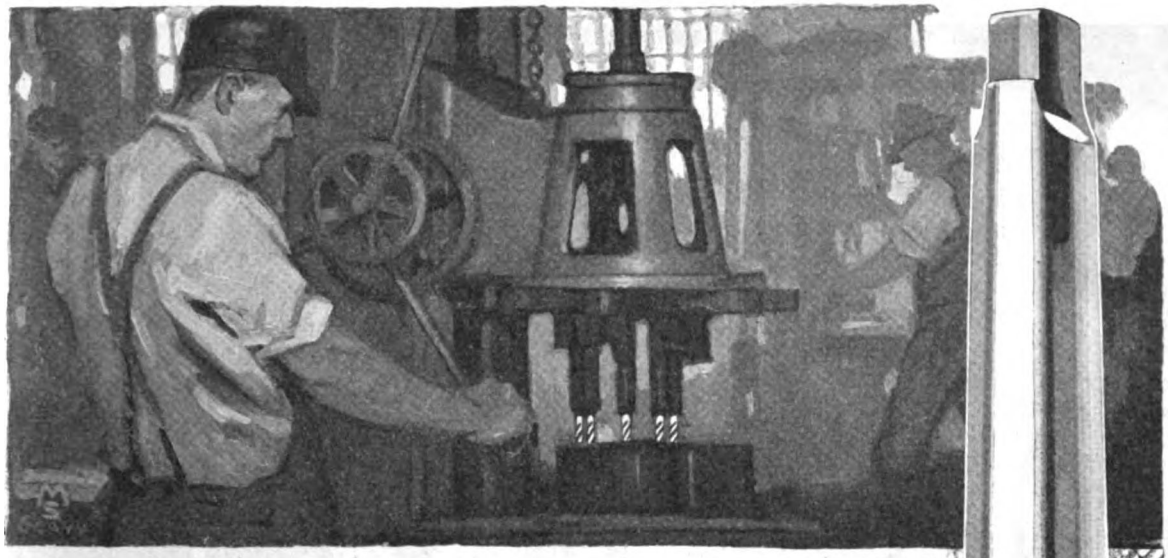
*Tapping cast iron tees on a machine in one of our foundries*

# Yes! They are different!

You'll find that Grinnell Pipe Fittings **are** different — that in consistent quality, they stand head and shoulders above any pipe fittings you have ever sold. And here's a sound selfish reason for this consistent Grinnell quality — we are big users of our own fittings.

Sometime ago we found that nothing but the best pipe fittings would do in our Grinnell Automatic Sprinkler Systems, heating and other piping work. The only sure way to have a thing right is to do it yourself. So we started making our own fittings. Quantity production soon gave us a surplus to offer in the general market. And so this great pipe fitting branch of our business started.

Today Grinnell Fittings are easy sellers and satisfaction givers. Every fitting is perfect—inspected twice for the slightest flaw. They couple easily and make tight joints. Any doubtful ones go straight to scrap. Grinnell fittings always bring all around satisfaction.



Send us an order—today.

## Drill Holes Give Electric Motors Interchangeability of Parts

The selection of an electric motor was previously made on the basis of its ability to give good service. Today, it must be built not only to give service, but also to permit the quick disassembling of its units or the rapid replacing of its parts should the occasion demand it.

It is interesting to know that accurate drill holes have helped to make electric motors easier and quicker to take apart. Also, that they have, by insuring more perfect threads, assisted materially in increasing the solidity of electric motors.

You will find that the manufacturers of well-built electric motors use Detroit Twist Drills because these drills actually do give more accurate holes with less regrinding and with less cost for power.

*When You Order Drills*

# A tool is as good as its maker

WHETHER for the skilled mechanic, the master carpenter, or the every day job about the house, garage or barn, your tools are a gauge of your workmanship—your means of expressing your creative self.

This creative instinct that rules every man's heart is the guiding spirit of attainment in the Millers Falls factory. Here among New England's peaceful hills it has found full expression for over fifty years in the craftsmanship of skilled toolmakers. Here you may find father teaching son the lesson that painstaking care for details and respect for his work bring lasting rewards.

Ask your hardware dealer about Millers Falls Tools. Look at them, handle them,—bit braces, hand and breast drills, auger bits, automatic screw drivers, mitre boxes, hacksaw frames and others. They feel "right" in your hands—their perfect balance and fit tell you that they will be your reliable, lifelong friends.

In and out Screw Driver No. 38. An efficient, rapid working, powerful household and workshop tool, for quickly driving or withdrawing screws by repeated forward thrusts of the handle.

MILLERS FALLS TOOLS

Digitized by Google

# *He Saw This Millers Falls Ad*

In the Saturday Evening Post and so he stopped in at the leading hardware store in his neighborhood. That No. 41 Screwdriver would be just the thing to use around his motorboat.

But the Salesman didn't let his interest stop there. A little questioning—and out came a No. 12 Millers Falls Breast Drill. The customer tested its balance, felt the free run of its gears, admired its fine finish. A word and a touch showed how the gears were shifted—and the sale was made.

Alert hardware dealers know that the "talking points" of Millers Falls Tools make it easy to hold the attention of the craftsman, be he amateur or professional. They tell us that every Millers Falls tool in service is a silent salesman for its fellows. Bits, braces, hand and breast drills, mitre boxes—each through its performance speaks of the merits of the entire line.

# CASTERS
## ONE SOURCE OF SUPPLY

## "Steel Gem"

The reason why jobbers handle "Steel Gem" casters is very evident. Just note the many good selling features.

The demand is already created. Customers want "Steel-Gem" casters because experience has taught them that "Schenck Quality" cannot be equalled in any other.

The "Steel-Gem" line of casters is a complete line. It is made in "All Styles and Sizes," Grip Neck, Phila. Stem, Square Plate. You get your complete line from "One Source of Supply."

"Steel-Gem" casters are packed in a strong paper box, one set to a box. They fit nicely on the shelf, look neat and are convenient to handle.

There are no come-backs on "Steel-Gem" casters. They are strong, well constructed and give years of service and satisfaction.

We have specialized in making casters for 30 years. Nothing but the best grade of steel goes into "Steel-Gem" casters—and they are made right, as only "Schenck" experience can make them.

## The Importance *of* HINGES *in* BUSINESS

CROWDED city streets, gigantic industrial plants, productive farmlands, railroads, mines—the energy of busy America is represented and directed with quick dispatch in our staunch towering office buildings. Within the four walls of these structures hundreds of distinctly different endeavors are conducted without conflict—behind closed doors.

And Hinges make doors possible!

The use of hinges outdates history. Since that first crude hinge was conceived centuries ago their use has increased with world-wide progress. Now everyone uses hinges everywhere.

The McKinney Manufacturing Company realized the importance of hinges fifty years ago when its business was started. Today McKinney Hinges and Butts are the standards in their field.

When planning for building or repairs be careful in your selection of hinges. Look for that name McKinney. It guarantees years of uninterrupted hinge service—lifetime usefulness rendered without a squeak.

You can get McKinney Hinges and Butts to match any architectural design. Whether they be for heavy cathedral portal, simple garden gate or small box lid, they combine artistic taste with practical busy-day service. There is a size to fill every hinge need perfectly.

You won't have to travel far to find a hardware dealer who is proud he carries the McKinney line. And you'll always find him a good man to deal with.

Remember that name McKinney. See that it appears on the hinges or butts you buy. McKinney Service is worth while!

**McKINNEY**
***Hinges and Butts***

*Also manufacturers of garage and farm building door-hardware, furniture hardware and McKinney One-Man Trucks. These McKinney One-Man Trucks eliminate the need of extra helpers and cut trucking costs in half.*

***Here's a photograph of the eighth national advertisement which will visit 3,000,000 hinge and hardware users and buyers. It will make the trip in the August 5th issue of The Saturday Evening Post.***

# *Hinge advertising is Hardware advertising*

THE brilliant playing of one ball star is shared by the team. The success of your salesmen is your success. The expansion of a single manufacturer is an advance of that industry.

McKinney Manufacturing Company realizes full well that the relation between a manufacturer and his dealers is no exception to this rule. This hinge manufacturer of a good fifty years standing not only thought but acted.

A national advertising campaign was planned. At the crack of the pistol it started cross country. It talks hinges to over three million persons a month. Every lap, it is gaining more appreciation of hinges, more regard for hardware—and *more sales.*

You'll profit with the winner if you'll root a little.

McKinney will furnish you with the "banners and pennants" which will help you to share in the cup of victory, if you're in the hardware business to win.

# For Quick Turn-Over

Concentrate your stock of shotgun shells. Confine your orders to the loads listed below. They will meet practically every requirement.

These are the standard loads for 12-gauge guns. Keep this list handy.

| | DUPONT SMOKELESS Drams | BALLISTITE SMOKELESS Grains | DUPONT BLACK Drams | OUNCES Shot | SIZES Shot |
|---|---|---|---|---|---|
| Large Ducks | 3, 3¼ or 3½ | 24, 26 or 28 | 3½ | 1⅛ or 1¼ | 4, 5, 6 or 7 |
| Small and Medium Ducks | 3, 3¼ or 3½ | 24, 26 or 28 | 3½ | 1⅛ or 1¼ | 5, 6, 7 or 8 |
| Grouse, Partridge, Prairie Chicken | 3 or 3¼ | 24 or 26 | 3¼ | 1⅛ | 6, 7 or 7½ |
| Pheasants | 3 | 24 | 3¼ | 1⅛ | 5, 6, 7 or 7½ |
| Geese | 3½ | 28 | 3½ | 1⅛ | 4, 3, 2, 1, or BB |
| Wild Turkey | 3½ | 28 | 3½ | 1⅛ | 4, 3, 2 or 1 |
| Squirrel, Rabbits | 3 | 24 | 3¼ | 1⅛ | 6 or 7 |
| Doves, Pigeons | 3 or 3¼ | 24 or 26 | 3¼ | 1⅛ | , 7 or 8 |
| Quail | 3 or 3¼ | 24 or 26 | 3¼ | 1 or 1⅛ | ½, 8 or 9 |
| Snipe, Woodcock | 2¾ or 3 | 22 or 24 | 3 | 1 or 1⅛ | 8, 9 or 10 |
| Shore Birds | 2¾ or 3 | 22 or 24 | 3 | 1 or 1⅛ | 8, 9 or 10 |
| Sora Rail | 2¾ or 3 | 22 or 24 | 3 | 1 or 1⅛ | 8, 9 or 10 |
| Trap Loads | 3 or 3⅛ | 24 or 25 | | 1⅛ or 1¼ | 7½ or 8 |

Think of the saving to you in capital invested if you stock only this highly condensed line; think of the saving in space and care; think of the faster turn-over and greater profits that are inevitably yours if you concentrate your selling efforts on a few loads that you know are right instead of scattering them over the scores of loads you are now asked to carry.

# ATKINS SILVER STEEL SAWS

## Smithing, Hammering and Blocking

No mill saw could do the work expected of it until it goes through the *Smithing, Hammering and Blocking* processes. Smithing removes the lumps in the plate as seen under a straight edge, Hammering equalizes the strain in the plate, and Blocking provides the tension for the speed the saw is to run. These operations are performed in the Atkins factories under the supervision of experts — men long in the service — men who know; that's why *Atkins Saws* have built a reputation for quality.

# GOODELL-PRATT
## 1500 GOOD TOOLS

# Mr. Punch Says:

The next best thing to a personal visit at the Goodell-Pratt Toolsmith factories is a thorough working knowledge of the big Toolsmith Catalogue.

A lot of hard work and straight thinking is being done all the time to make this Toolsmith Catalogue a regular Service Guide Book for the hardware merchant.

Think of the sales possibilities right here in your own town for the contents of those 464 pages of hand tools—more than 2000 different tools, the largest line under one name in the world.

The Toolsmith message is being sent out constantly to the users of good tools all over the country.

Did you know that the new Toolsmith Catalogue contains 150 new tools?

There's progress for you — every one of those new tools means new business for Toolsmith Stores.

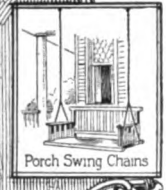
# THE HONOR OF THE ACCO FAMILY

Weed Tire Chains for Passenger Cars



Weed Tire Chains for Trucks

Dobbins Blow-Out Chains

Chains for heavy work of all kinds

"Elweltra" Trace Chains

Sash Chain

Porch Swing Chains

Chandelier Chain

**Weed Chains for Motor Cars!**

**Anchor Chains for Ships!**

**Chains for Railroads!**

Devices that make travel safe on land and sea, that can be absolutely depended upon to protect human life, are typical of the nature and quality of Acco products.

The workers who make up the Acco family know they are doing more than making commodities merely to be sold.

They know that it is their work that holds millions of motor cars and trucks to slippery roads.

It is their work which enables mighty ships to ride safely at anchor, whether in harbor or helpless on a lee shore.

It is their work which makes possible the safe operation of thousands of railroad trains.

This gives the work of the Acco family honorable and distinctive responsibility which is reflected in every link of every Acco product—"From Plumbers' Safety Chain to Ships' Anchor Chain."

In the Acco family, loyalty to the work itself is rated above everything.

This is true of every worker whether the job is directing all of the numerous plants, or operating a 2,000,000 pound tester, or a typewriter.

The honor of the Acco family is in the hands of each member of it, even to the youngest worker.

These are the reasons why it is possible to say not only that "Every Weed is Guaranteed" but that every link in every chain made by the American Chain Company will hold for the purpose intended.

*The big ACCO Line includes chains for every purpose—from Plumbers' Safety Chain to Ships' Anchor Chain—all Styles, Sizes and Finishes.*

# Ideal Poultry and Rabbit Fence

## Is a Fence and Not a Netting

The horizontal wires in the Ideal Fence make it possible to stretch it perfectly, and FEWER POSTS ARE NEEDED and NO TOP OR BOTTOM RAIL. Posts may be set a rod apart, and if the fence is well stretched it will be strong and effective.

Hexagon mesh poultry netting is good and has many uses, but it cannot be stretched without pulling together in the middle, hence top and bottom rails are necessary and the posts must be close together.

Like all fences the heavier the wire the longer it will last, so we recommend the heavier styles; but for many purposes, like protecting a young orchard or vineyard where a cheap fence is good enough, the No. 20 will do the work effectively and is less expensive when erected than any other fence or netting with the same size of mesh.

For permanent poultry yards the heavier styles are better and cheaper, life of fence considered.

In all weights and styles the horizontal wires are two inches apart. The size of mesh is governed by the spacing of the mesh wires. Every style has a cabled selvage both top and bottom.

Gentlemen:

As per request of your representative, we are sending you a photo of the Linder Hardware Company, Tulare, Calif.

We have used Toncan Metal for Marquee and Cornice on this building, also for a large number of buildings in this section, and are well pleased with this metal.

In addition to its durability, it is of very superior working quality, and stands the strain of forming, better than steel.

We are glad to express our appreciation of Toncan Metal.

It needs no other recommendation than its own record for satisfactory service.

Yours very truly,

BARRETT-HICKS COMPANY

Per

ANY of the different styles of "Cannon Ball" hangers can be used on any "Cannon Ball" track—and any combination of the different styles of "Cannon Ball" track may be used with any "Cannon Ball" hanger. This means that you can always answer a customer's needs as long as you have any "Cannon Ball" track and hangers in stock. In addition you have the advantages of being able to feature special combinations in the regular styles for barns and similar buildings, and a number of door sets for garages. Write and ask for the STAR barn book and catalog.

You can sit on the open end of the Rid-Jid without tilting. Its convenience and strength appeal to every woman who sees it.

Note how compactly and easily the Rid-Jid folds up. It can be carried or stored anywhere. When standing it positively will not creep, sway or wabble from the motion of ironing. It is the strongest, lightest, most practical ironing table ever made.

# And Now There is Added Sales Impetus

THE Rid-Jid Open End Folding Ironing Table has made good on merit. It has sold big—because it is so far and away ahead of any other ironing board ever invented.

But every woman doesn't know about the Rid-Jid. We are putting added impetus into the already steady sales of this table with national advertising. Every month we tell the Rid-Jid story to hundreds of thousands of women.

Your customers are going to ask you for a Rid-Jid Ironing Table. **Will you have it in stock in order to take advantage of this increased and profitable business? Write us for details and for attractive dealer helps that link your store with our advertising.**

*Unique, original window trims will give your store personality*

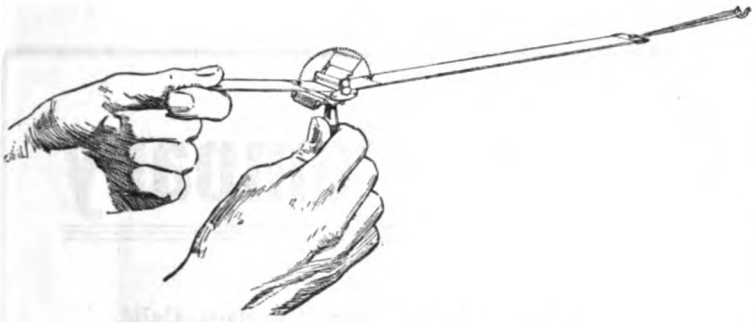
# 82% of all sales to men are influenced by this one thing

## *How "Store Personality" is being used by progressive dealers to double and treble their safety razor sales*

WHAT is it that often makes one store have a hard time with certain articles of merchandise, while another store located a few doors away may do a tremendous volume of business on the same line of goods?

*Opens for cleaning like the leaf of a book*

Just what is it that makes people criticise one store, while they go out of their way to trade in another? The answer can be given in two words—*Store Personality.*



Stores have a personality just as people have. When a store has a *pleasing* personality, business comes—if not, business goes to competitors. And store personality is based on just one thing—*service.*

### *Examples of dealer service*

Dealers everywhere are up against high rents, high salaries, shortage of help. Here are a few examples of how some of them are offsetting these obstacles to maximum profits.

A dealer in Iowa has averaged more than $3,000 a year for the last two years—selling AutoStrop Razors because he gave his customers an opportunity to demonstrate the AutoStrop Razor for themselves.

Digitized by Google

## Tie up to this big campaign

45,000,000 people, readers of seven magazines and 320 local newspapers, will see these advertisements. Every advertisement emphasizes the AutoStrop Razor's unique self-stropping device.

Tie up to this advertising by demonstrating the self-stropping feature of the AutoStrop Razor at every opportunity. *Get the customer to strop the razor himself,* just to see how easy it is. It is remarkable how interested 9 out of 10 men become.

### *Practical business-building ideas*

A Pacific Coast dealer gives an AutoStrop Razor free to any Coast League baseball player hitting a home run at the local park. He has established himself as a "live wire" in the cutlery business, and his trade in all lines is increasing.

A dealer in New Jersey made his store known for miles around as "Razor Headquarters." His plan is a simple one—he offers an AutoStrop Razor free to anyone who can make the stropping mechanism cut or injure the strop while restoring the edge.

A dealer in Pennsylvania is speeding up sales by displaying together articles *that are used together.* With his monthly window-trim featuring the AutoStrop Razor he always displays shaving brushes, soap, mugs, strop dressings, blades, even talcum and shaving lotions.

These are practical business-building ideas that have proved their worth with other dealers. They will help a lot toward making *your* store stand out in the community—toward giving it a personality that will attract customers and hold them.

Write for our merchandising plan and other dealer helps.

We can help you to duplicate the success you have just read about.

# A Message from the man who makes the Stars

IN August 15, our company which has manufactured Star Hack Saws from the beginning will change its selling policy and market its own blades. The double-page Saturday Evening Post advertisement of August 21 reproduced in miniature on the opposite page will announce this change to Star Hack Saw users.

This new service is, I believe, one of the most important steps ever taken by the organization over which I have the honor to preside. Since 1883 we have been making Star Hack Saw Blades of a quality that has made the green box of Star Saws famous wherever hardware or mill supplies are sold.

No matter how small or remote the store, you are almost sure to find Star Saws there—often the only hack saw carried. It is the famous old brand of hack saws that has stood out in front for 37 years.

There is no need here to recount the price paid for this leadership in a lifetime of metallurgical research and machine invention, concentrated on hack saws alone—in the development of a highly organized plant with special Star Hack Saw manufacturing methods from one end to the other.

The important thing now is that to this better Star Saw we are now adding a better Star Service by selling Star blades ourselves from the factory that makes them. This change is of vital interest to you and every other customer of Star blades, for it makes Star results doubly sure in the users' hands.

After August 15, 1920, send your orders for Star blades to this office if you order direct, or be sure to specify "Star" on your jobber orders. We invite correspondence and service suggestions from the trade on any subject connected with Star Saws. I will see to it personally that they receive every attention.

*Geo. N. Clemson* President

**CLEMSON BROS. INC.**

Digitized by Google

Star national advertising is well known. And it has made the leadership of Star Hack Saws still more emphatically apparent. By a substantial margin Star Hack Saws are the largest selling hack saws and our advertising is increasing this demand still further and making them more and more profitable for you to handle.

Our plans for 1921 will continue our advertising policy on a larger broader scale than ever before which is your guarantee of the continued and increasing demand for this famous old brand of hack saws.

# MAGNETIC CLOTH

## The Most Complete Domestic Help Device Known

It instantly removes Grease, Burned Foods and all dirts from all kitchen ware. ALSO cleans Vegetables, New Potatoes, Sweet Potatoes, Carrots, Parsnips and such like. ALSO Tile work, Marble or Brown Stone Steps and many other things too numerous to mention. ALSO is used extensively for cleaning stained and greasy hands, for instance in machine shops, garages, etc.

These are the days of progress and efficiency. The woman in the kitchen is no longer satisfied with the old-fashioned, back-aching methods of cleaning greasy pots and pans; MAGNETIC CLOTH is now the active housemaid that saves time and labor and conserves sweetness of disposition. The kitchen sink of the modern housewife is no longer complete without a MAGNETIC CLOTH hanging on a hook.

The MAGNETIC CLOTH is as pliable as cloth, entirely as efficient as the best abrasive. Made to slip on the hand like a mitten. After using, rinse in warm water and hang up by the loop, to dry.

As a magic wonder this MAGNETIC CLOTH is demanded everywhere; its market is wide and insistent and it is a logical, inevitable profit-maker for the merchant who reads and heeds the mind of his trade.

# Putting High Powered Publicity Behind a Big Selling Opportunity

FROM the Atlantic to the Pacific, thousands of Mueller merchants in practically every state in the union are profiting, and profiting **big,** by an unparalled selling opportunity.

High fuel costs and fuel scarcity have awakened people everywhere to a keen realization of the necessity of efficient heating systems.

And because the Mueller, the "Big 3," Pipeless Furnace, has proved its heating efficiency and big fuel saving under every test, it is the logical choice of thousands of home owners who are replacing antiquated, fuel-wasting stove heaters with this modern heating system.

Three big, exclusive construction features, the "Big 3," have definitely established Mueller superiority — have made it famous throughout the country.

Mueller advertising in big attention-compelling advertisements, is driving home these three vitally important features and giving the Mueller a supremacy which means greater sales and more profits to every merchant who handles the

# Starrett Books - Vol. I and II

75¢

## Books That Sell Themselves

Next time a mechanic comes in to buy a tool, put a couple of Starrett books on the showcase — sort of careless like — while you're wrapping up what he's bought.

Needn't give him much of a selling talk. Just let him look 'em over — the tables on gear- and screw-cutting, machine speeds, and the like; the things he wants to know about jig and tool making, etc. Let him browse along and see how much there is in them. When he gets through, you'll have another sale to ring up.

Over 40,000 copies of Volume I have already been sold. Thousands are buying Volume II Mechanics like them, because they're practical.

They are books that boost sales. They help machinists to do better work, and that means a bigger demand for fine tools.

Both Volumes I and II are bound in red Athol leather, lettered in gold. About 175 pages in each. Size 4½ x 7. They sell for 75 cents.

# THE ECLIPSE BOLT BIN

From 3 to 10 Sections
Size of each Section
6 in. x 30 in.

## The Bin That Makes The Quick Sale Possible

There IS more profit in supplying your customers' wants in the speediest manner.

Such service passes him out of your portals with a feeling of profound respect for your business ability.

However, to attain this goal, it is necessary to install fixtures that will systematize your order-handling capacity, and the ECLIPSE BOLT AND LAG BIN is one of these.

This device, consisting of ten cold rolled, No. 20 Gauge Pressed Steel sections of 12 compartments each, will accommodate a wide range of Bolts, Butts, Lags and small Hardware articles.

It renders each class and size of merchandise readily accessible.

Each section rests upon ball bearings, and revolves with ease under full weight.

Here is the fixture that will save hours of time and steps—are you going to pass over this opportunity, or are you willing to carefully consider our literature, which we send free of charge?

It's up to you.

### *Specifications*

Takes any standard .380 rimless pistol cartridge. Capacity, 7 cartridges in magazine with one additional in chamber. Hammerless with side ejection. Three separate safety devices. Length 6⅝ inches, width 9/10 inch. Weight 21 ounces. Hard rubber stocks. Dull black finish. Made only in one caliber one style, one finish.

# There's a Real Market for this Pistol

Remington not only succeeds in giving the sportsman—your customer—what he wants in firearms and ammunition. It has been a Remington policy to anticipate the needs of the consumer.

For some time sportsmen have been asking Remington for an automatic pistol which would meet all the requirements of protection, touring and hunting—a general purpose arm—a pistol which would take the same dominating position among pistols that Remington shotguns and rifles have occupied among the larger arms.

The sportsman wanted a light, compact arm of low recoil built to shoot straight and hard. In producing the new .380, Remington has gone further than that. This Model 51 automatic pistol is COMPLETELY SAFE—made so by an extra safety device which locks the sear and hammer and makes impossible the accidental discharge of a cartridge left in the chamber when the magazine is removed.

The Model 51 is a good seller because it possesses improvements which the sportsman has needed and which he is quick to recognize once he sees the arm. Some of these pistols should be in your show case.

Remington Products are distributed exclusively through the wholesale trade.

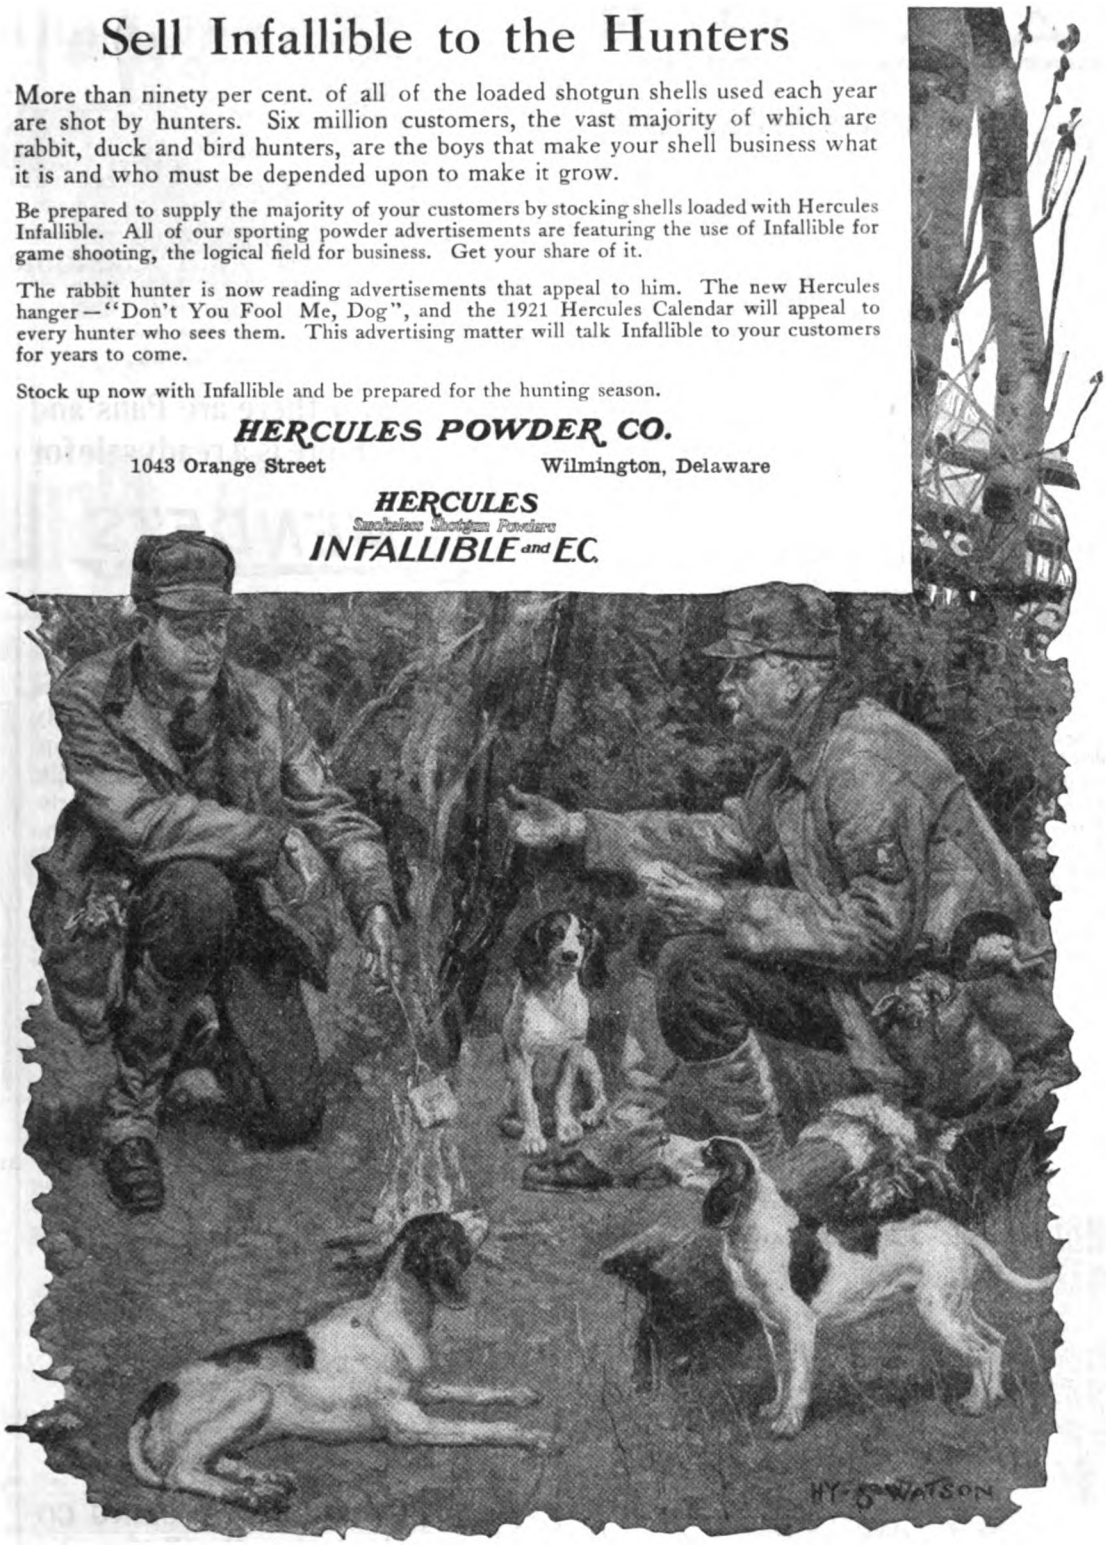
# Sell Infallible to the Hunters

More than ninety per cent. of all of the loaded shotgun shells used each year are shot by hunters. Six million customers, the vast majority of which are rabbit, duck and bird hunters, are the boys that make your shell business what it is and who must be depended upon to make it grow.

Be prepared to supply the majority of your customers by stocking shells loaded with Hercules Infallible. All of our sporting powder advertisements are featuring the use of Infallible for game shooting, the logical field for business. Get your share of it.



The rabbit hunter is now reading advertisements that appeal to him. The new Hercules hanger—"Don't You Fool Me, Dog", and the 1921 Hercules Calendar will appeal to every hunter who sees them. This advertising matter will talk Infallible to your customers for years to come.

Stock up now with Infallible and be prepared for the hunting season.

## Wherever there are Pans and Kettles there is a ready sale for

**MENDETS**
A PATENT PATCH

*half million a week sold*

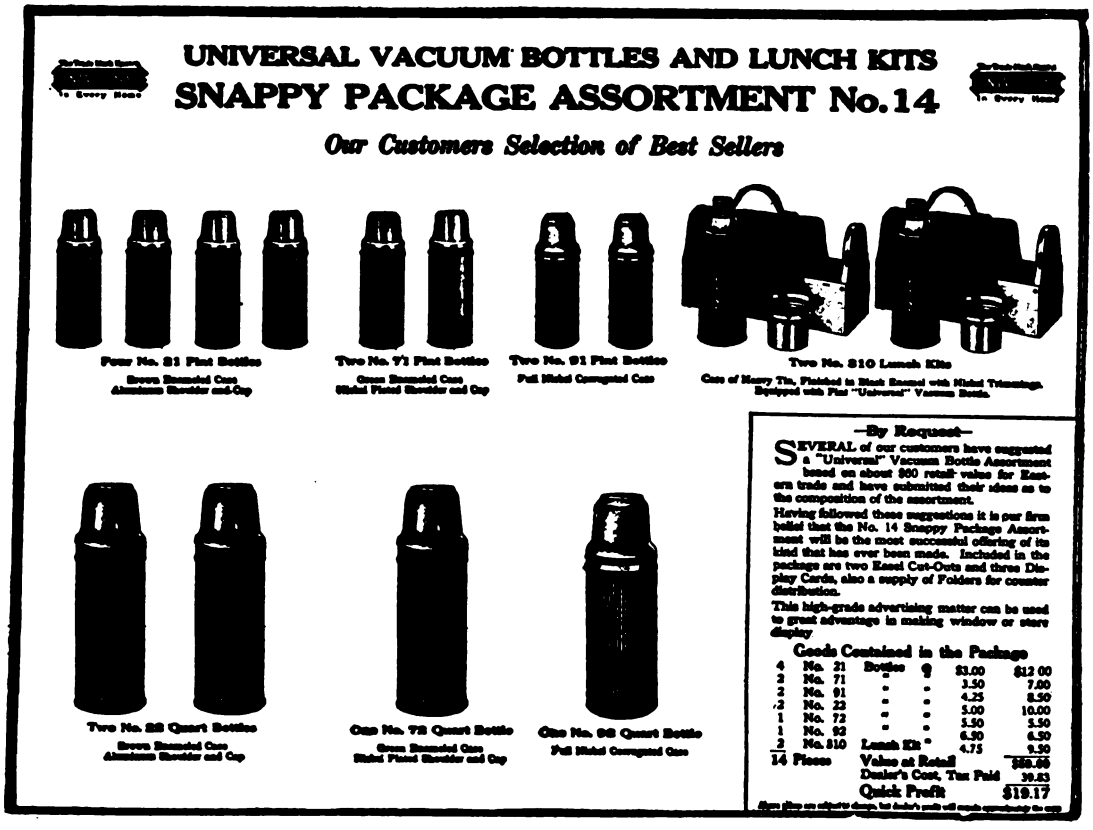
MENDETS — **patented patches** that mend all leaks instantly in graniteware, aluminum, copper, tin and iron cooking utensils, washboilers, etc. Fit any angle. Stand severe heat. They require no heat, solder, cement, or rivet. They go on in a second and stay put.

The largest chain of stores in the country sells over twenty thousand packages of Mendets a week.

Many jobbers buy Mendets every few weeks in 25-gross lots.

Selling Mendets is big business for retailers and jobbers. It is also a satisfactory business.

Mendets appeal instantly to home-loving people. They are especially appropriate now, because of the widespread preaching and practice of economy.



This little retailing giant, MENDETS, is advertised in a big, broad newspaper campaign.

The Counter Carton is a Silent Salesman.

*Ask your Jobber. He sells Mendets, the patented patch, or write us for the name of a nearby distributor.*

# Stanley Tools

## Stanley Extension Bit Holder

Used in connection with a Bit Brace, it will extend the Bit, enabling the user to bore through walls, floors, etc., where the ordinary Bit will not reach.

The Socket in which the Bit rests and the Shank for its entire length are of one piece of steel.

Note how the shape of the socket conforms to the Shank of the Bit. This form of construction, together with the improved Lock Nut, makes it impossible for the Bit to work loose while boring.

Any length Holder will follow up a 5/8-inch Bit. Heavily nickel plated and highly polished. Made in six different lengths.

## The Only Screw Holes in the World

### The "Hole" Problem

The advantages of Screw Holes are: they can be used without damage to receiving material; they enable you to Standardize to wood or machine screws in all materials; they are made of brass and will not rust under atmospheric or moisture conditions; special tools are not needed for using them in any material; they can be used in any place a screw can be used; no special screws are needed—these Screw Holes fit any wood screw or machine screw now in stock; they make the neatest possible job in any material; they are endorsed by all dealers in screws, and by all users of screws; in spite of the high cost of brass, Screw Holes are yet cheap; they make everlasting holes in any material, and anyone who can drive a nail can use them.

You must stock Screw Holes, for your trade demands them.

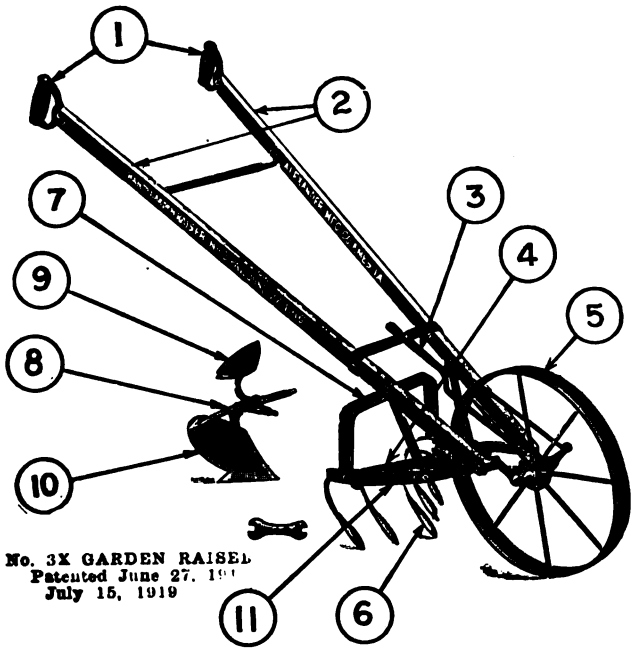
Handle Detached. Cut shows Right Hand Casement Adjuster

## Superior Casement Adjuster

**For windows that open out**
**Operates without disturbing the screen**



Superior **Casement Adjuster** is the most convenient to operate because all that is required to unlock and move the window is to simply move the handle; when you let go the handle the window is locked automatically.

Superior **Casement Adjuster** is the strongest because it locks on the rod fastened to the window and thus combines the strength of the two rods.

Superior **Casement Adjuster** holds the window firmly at any angle and does not allow the window to rattle.

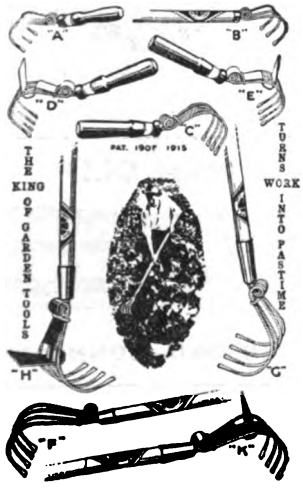
## No Wrench or Tool of Any Kind is Needed to Change Equipment Here

Pull outwardly on spring steel sides (11) of main frame of **cultivator.** This allows 4, 6 and 7 to be removed, turned over, and replaced, and we have a **wheel hoe.** Or, by laying 4, 6 and 7 aside, and placing 8, 9 and 10 in their place, we have either a plow, or, a tool for marking out rows for planting.



## QUALITY

This unique construction, together with the HIGH GRADE MATERIALS used, and the extraordinary finish given to grinding and polishing of the tillage tools, makes the No. 3X Alexander Garden Raiser the best value, in a garden tool, on the market today. Our 32 page catalog shows a complete line of seeders and cultivators.

"THE GARDEN DESERVES A GOOD TOOL"

# WAGNER Door Hangers and Tracks

*Roller Bearings*

**Quality** hangers and tracks designed to overcome all the troubles and draw-backs of cheaply built hangers and tracks that are made merely to sell at a price. Wagner Hangers have roller-bearing wheels, tandem trolley with bumper on end to protect wheels, a very simple and practical cam vertical adjustment and other features that put them out of the ordinary class. Tracks are self-cleaning, bird-proof and much heavier than ordinary tracks. They please customers and build trade. Write for catalog showing entire line.

**SAFETY** INTERLOCKING STOVE AND FURNACE **PIPES**

Fire Preventing

Home Protecting

Ambrose P. McGuirk's Patent

**Our Asbestos-Covered Interlocking Furnace Pipes, Interlocking Stove Pipes, Interlocking Asbestos-Covered Flue Thimble, Interlined Interlocking Ring Flue Caps and Interlocking Elbows are not luxuries nor needless accessories. They are very necessary where stoves and furnaces are used. By fastening and cementing the Flue Thimble in the Flue Hole, and putting in and turning the pipe joint and locking it firmly therein, it can't pull out or be pushed in too far. Each successive pipe link is locked to the receding one, until the whole pipe is firmly locked together, and to the Stove Collar, so that the pipe can't fall down. When the pipe is taken down put in the Flue Cap and lock it, making the flue hole fire safe.**

**Every home and factory owner is morally liable for impending fires on his property, and as fast as flames reap losses will our dealers reap profits on our Fire Safe, Rust Proof, Interlocking Pipes, Flue Thimbles, Caps and Elbows.**

**Send for Price List and Descriptive Statement.**

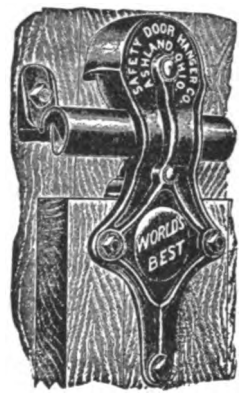
# MYERS OIL FORCE PUMP



*For pumping Kerosene, Gasoline, Lubricating Oils and Similar Liquids direct into the Measure from Original Steel or Wooden Barrel or Drum.*

Inexpensive equipment but just as satisfactory as high priced cabinets, special tanks and other expensive paraphernalia. Does away with the necessity of transferring the liquid from original container to tanks or other receptacles. Simply insert pump in opening—side or top—of barrel or drum, screw in handy tapering connection and start to pump contents direct to measure without loss of time or waste of liquid.

Every public or private garage, every manufacturing plant, every power station, every farm where power machinery is employed, every oil and gasoline depot is a prospect—a rather inviting field for live dealers to reap a harvest in with another proven and successful Myers "Honor-Bilt" Pump. Write us today. Literature and prices to the trade.

# *A Good Rope—*
# *Seaport Manila*

Trade Mark

MOST so-called Hardware grades of Manila Rope omit the word "Manila," manufacturers well knowing that this particular grade is composed largely of colored Sisal fiber. The appellation of "Hardware Rope" has been misused and abused. It is unfair to a fraternity having a higher sense of quality in rope than any other class because larger distributors.

SEAPORT MANILA is 100% Abaca Fiber. A good rope, well made and quoted at as low a price as any Pure Manila Rope can be consistently offered. Has no equal in anything in a second grade on the market and a trial will be convincing. It is a departure in rope manufacture that will be appreciated by dealers and consumers where a less expensive Pure Manila Rope is wanted.

# What's In a Name

Enough—plenty—SUCCESS in the RIGHT ONE properly applied. It's half the game, naturally, you don't get a good one with poor merchandise, unprincipled methods nor disregard for rendering distinctive and valuable service. Establish a meritorious name, it compares with a solidly laid rail system that has demonstrated "delivered" ability, preciseness and certainty, when the charges are fair the public uses the road over and over again, even if the cars are changed in color, the conductor's uniform from blue to gray or electricity replacing steam.

"Good Morning" (It's me they're talking about)

Evidence galore, Brunswick Balke (Pool Table Mfgrs.) undeniable success producing talking machines and automobile tires. Do you think the name helped any?

Heinz put over 57 and more varieties. We contend first one was hardest, name helped others along materially.

Chandler Motor Car Company identified with Cleveland Motor Car Company. Chandler a success, Cleveland unknown, BUT, public had sufficient confidence in connection that 25,000 Cleveland cars sold before one was shown.

Think of it. Standard Oil put over mild laxative (Nujol), really there is a contrast between Kerosene Stove (Perfection) and body lubricant.

"WHERE DO I COME IN?" asks the above member of the Gem Brush family. **HERE AND NOW.**

"On and above the fact that GEM BRUSHES possess one hundred cents of utility for every dollar expended, pay legitimate wholesome profits to everyone handling them and guaranteed throughout, comes the burning truth that the name G-E-M, connected with shaving things particularly, spells **SUCCESS** from every stand-point necessary and essential. **GEM BRUSHES** represent new car developed with all knowledge possessed up to 1920 and now placed on that solid Gem System, which is **BUYING POWER**, they will ride forth with confidence of our trade to reach all points which is **ULTIMATE CONSUMER** via stations called **DEALERS**, through the transfer points called **JOBBERS**. Ring the bell and go ahead, you have the goods.

We all went to the top with Gem Razors and Blades because they are chocked full of quality, usefulness and results, they survived and succeeded because **GEM** exceeded everything in its class, stepped into another one of its own, very true, that is going to continue, also prevail in **GEM BRUSHES**.

Their name is 50 per cent at least of their selling power. If we put lake water in bottle labeled Gem Hair Remover, large quantities would be sold, but, eventually get knocked off the market; nevertheless, we'd sell a lot of it. **GEM BRUSHES** not only will sell on account of name, but, be backed up in use with real quality and service.

**GEM BRUSHES** will be advertised in magazines and through other channels all year around.

Don't lose sight of the fact that **GEM BRUSHES** are in a class alone, **GEM BRUSHES** are manufactured to sell no cheaper than good brushes can be produced.

**GEM BRUSHES** is all knowledge of Brush Manufacturing experts thrown together, divided with essential factors and the results **GEM BRUSHES**.

(Signed) THE GEM SAFETY RAZOR CORPORATION.

ALUMINUM

MADE IN OHIO, U. S. A.

# ALUMINUM "Real Solid"

## ANNOUNCEMENT

The "REAL SOLID" LINE has been for 20 years, the Strong, well known, dependable Aluminum line of Kitchen Utensils.

Our Policy is and has been to give the dealer goods of such quality that assures him not only his PROFIT, but the housewife's continued patronage. We have now added

### A New Line of

## "REAL SOLID WARE"

This is a Heavy Drawn line STAMPED from heavy tempered Sheets, which is far superior, in many ways, especially in Rigidness and Durability.

We have eliminated unnecessary expense of CAST ALUMINUM HANDLES, etc., and are Putting MORE METAL into the BODY of our UTENSILS.

TRIMMINGS — Tinned Iron, using Double Coated Tinned Iron—The best on the market.

PROTECTED HANDLES—All Coffee and Tea Pots with handles, both curved and straight—bottom of handle is protected with Metal Trimmings, so that it will be impossible for flames to creep up over bottom and burn off handle.

OUTSIDE FINISH—The Same HIGH CLASS polish as heretofore.

INSIDE FINISH—Scratch Finish Superior because it does not show finger prints from handling or dirt, which may accumulate while on dealers' Shelves.

**We have added 25 New Items, all practical. This makes the "REAL SOLID" Line the most complete on the market**

Write Today and get our New Catalog just off the Press.

# What "Turnover" Means

TURNOVER means investment of dollars in goods, sales of those goods, re-investment, re-sale, and so on, and the process must be repeated often and at a profit, says the Supply Manufacturer.

This is the goal of every business, large or small—whether the amount involved is one thousand dollars or one million—and the merchant will fail to score when not shooting at this target.

The profit made out of a business does not depend upon the amount of capital tied up in stock. On the contrary, net earnings hinge upon the frequency of buying and selling—the speed with which dollars are made to produce.

The retailer's ability to superintend dollars, to keep them employed so that they are bringing in other dollars, determines the degree of success attained as a storekeeper.

The purpose of the retail business is buying merchandise, selling that merchandise for more than was paid for it, then re-investing and repeating the process.

Intelligent selling is therefore the kernel of the turnover proposition.

If a dealer bought a piece of merchandise for a dollar and never sold it, he would simply lose his dollar; if he sold it for no more than a dollar, he would not make a cent, in fact would be out his operating expense; and even if he sold it for a dollar fifty, but took six months to do it, he would not be serving the true purpose of merchandising, which is frequent turnover of invested capital at a profit.

When money is invested in goods, the merchant must, first, sell the goods; second, sell them at a profit; third, sell them quickly.

Always remember that money has earning power. You could put your funds in securities and make an average six per cent any time, without doing a lick of work yourself. You get that return because somebody else is making your money work. If it became idle, you would not receive your dividend.

When goods move slowly, when it takes a long time to turn them into money they are simply wasting the earning power of the dollars invested in them; and when they are sold merely on an even basis, the earning power of working capital is likewise squandered.

Digitized by Google

## WHY THE SALE WAS MADE

The salesperson knew how to smile.

The person who served the customer was neat, clean and business like.

The customer did not have to make a counter search for merchandise.

Goods were easily found.

The customer was not compelled to drag information from the clerk.

The salesperson did not talk too much nor too little.

The salesperson acted as if it was a genuine pleasure to show goods.

The customer was made to feel at home as soon as he entered the store.

The salesperson was not overdressed.

The customer was given a correct reply to all questions.

The salesperson offered service as soon as the customer made known his wants.

The customer was not compelled to wait a second longer than necessary for parcel and change.

The salesperson explained and demonstrated goods solely on their merits.

The salesperson looked his customer in the eye and did not shift his gaze when asked a question.

The customer knew the goods he bought would be properly wrapped.

The salesperson chatted pleasantly with the customer while the goods were being wrapped.

The customer expected and received a pleasant "thank you" at the end of a very pleasant sale.

---

## BE A MAN

It's a mighty good thing, while you're running life's race
Just to pause as you go, and come face to face
With your conscience, and ask it a question or two.
For it's right you should know what your life means to you.

Have you done things worth while, have you drifted along,
Have you filled it with sighs, have you filled it with song,
Have you helped when you should, have you tried to do right,
Have you struggled for good, or just fought for might?

Have you given your hand to some fellow in need,
Have you sneered at the man who was not of your creed,
Have you been open-hearted and ready to do,
Have you tried to be just, have you tried to be true?

Oh, it's easy to preach and easy to tell
Of the other chap's faults—but our faults, ah, well!
We are cowards at times, and the truth, you will find,
Is a thing we dislike, for it's rather unkind.

But the Past, let it rest. Give a thought to Today,
And Tomorrow, as well, for the Time's growing gray;
Do the things that you should, do the best that you can,
Crown your life with your deeds—be a red blooded man!

## LEARN THESE TEN COMMANDMENTS

1. Thou shalt not wait for something to turn up, but thou shalt pull off thy coat and go to work that thou mayest prosper in this affair and make the word "failure" spell "success."

2. Thou shalt not be content to go about thy business looking like a loafer, for thou shouldst know thy personal appearance is better than a recommendation.

3. Thou shalt not try to make excuses, nor shalt thou say to those who chide thee: "I didn't think."

4. Thou shalt not wait to be told what thou shalt do, nor in what manner thou shalt do it, for thus will thy days be long in the job which fortune hath given thee.

5. Thou shalt not fail to maintain thine own integrity, nor shalt thou be guilty of anything that will lessen the good respect of thyself.

6. Thou shalt not covet the other fellow's job, nor his salary, nor the position that he hath gained by his own hard labor.

7. Thou shalt not fail to live within thine own income, nor shalt thou contract any debts when thou canst not see thy way clear to pay them.

8. Thou shalt not be afraid to blow thine own horn, for he who faileth to blow his own horn on the proper occasion, findeth nobody standing ready to blow it for him.

9. Thou shalt not hesitate to say "no" when thou meanest "no," nor shalt thou fail to remember that there are times when it is unsafe to bind thyself to a hasty judgment.

10. Thou shalt give every man a square deal. This is the last great commandment, and there is none like unto it. Upon this commandment hang all the law and profits of the business world.

---

## BE A SPORT

You may call yourself dull in a fit of despair,
Or drop all your pep, and say you don't care,
But I'll tell you, my friend, that's a habit to break,
In planning this world not a single mistake
Was made in the building. So when you complain
Take stock of yourself. You're the chap that's to blame.
Just right about face; it may hurt some, it's true.
But that's just the way any good sport would do.

When you wake in the morning don't look for a cloud.
You know what's behind it. Just swing in the crowd.
Be one of them, cheerfully, singing along.
You may get a bump, but don't stop your song.
Perhaps one will hear it who needs just a bit
Of encouragement now. Your song may be it.

What matter if yesterday's failures were big?
Today is your day, so get in and dig.
If you meet any trouble, why just change its name,
And call it a ladder. They oft' lead to fame.
But whatever you do, be quick and begin it;
You never can tell just how much there is in it.

—Jane Bates, in Forbes.

# Why Advertise When Behind in Deliveries?

(From Joseph Dixon Crucible Co.)

THIS seems to be a very natural question, and the answer involves the discussion of a vital policy of this business—a policy that is fundamental.

If we were building a business for today our policy would vary from day to day with the temporary changes with which every business has to contend.

But we are building for the time to come and we hope that this business will become many times greater than it is today. Without the proper foundation it would undergo violent changes dependent upon temporary national, local or even imaginary conditions.

If we should permit ourselves to become inflated with self-confidence when business conditions are favorable, restricting our selling and advertising activities, and go down in the dumps when conditions are not so favorable, this business would not amount to any more than the existing conditions would make of it.

### Hope Manufacturing Will Never Catch Up With Selling

We say right now, without reservations, that we hope, regardless of how aggressive and efficient our manufacturing department may be, that it will never be able to catch up with our selling organization.

If our efforts should be halted in the middle of the road in times of liberal buying to wait on the manufacturing department; there might come a time when the manufacturing department would have to suspend operations while waiting on the sales organization.

### Policy Not Subject to Wavering

With such a policy we would be running around in a circle, disorganizing one day and reorganizing the next.

The greater the demand for our product, the quicker the turnover for merchants; and the more frequent the turnovers, the larger is the volume of profit.

In this business advertising is a sales policy—the same as our policy maintaining a sales organization—and we might as well consider the elimination of one as the other. Neither will be eliminated, as this business needs both if we are building for the future.

We hope the idea will never creep into this organization that there will be any let-up in aggressive methods, which might suggest that when business is good there is not occasion for work and when business is poor it is too hard to get.

### The People Must Not Forget Us

We constantly have in mind that the American people are much more concerned in their own affairs than in ours, and if we should restrict our selling and advertising activities they will begin to forget us—and this would be our fault.

We are going ahead with the idea of increasing the present momentum in favor of our goods; and if conditions should turn face about, our dealers and ourselves will be in a better position to hurdle obstacles than if we originated a policy for each condition as it arose.

## THE MAN TO BLAME

(Copyright by Napoleon Hill)

If you are a failure, if you are unhappy and despondent, you may see the person who is most to blame by stepping to the looking-glass!

It's sad, but true!

When you begin to succeed you may put it down as a sure thing that you have commenced to believe in yourself.

Through the principle of Auto-Suggestion you are constantly urging yourself on to greater achievement or defeating your aims, to the extent that you have faith in yourself or lack it.

Wrapped up in that wonderful brain of yours you have all the potential ability which you need with which to succeed in any undertaking that is possible of accomplishment.

You are the only person on earth who can cut the fetters which bind that force and withhold it from use.

The thoughts which you hold in your own mind are being constantly registered in the minds of those with whom you come in contact. This is a scientifically proven fact. Can you not see, then, how necessary it is for you to think well of yourself? Can you not see why you ought to believe in your ability to accomplish all that you undertake.

The line which marks the difference between the successful and the unsuccessful man is definite and easily removed. One believes he can do all that he undertakes and goes ahead and does it; the other one believes he cannot accomplish anything, so he never begins!

If you want to witness a marvelous transformation in yourself, commence now and for ten days stand before a mirror for ten minutes each day, look yourself squarely in the eyes and say—"I believe in you; you can finish everything you start; you can induce people to like you; you can get people to favor you by first favoring them; you can win people's confidence by placing your confidence in them." The result will be startling.

---

## THE THREE SWEETEST WORDS

There are three words, the sweetest words,
In all of human speech—
More sweet than are all songs of birds,
Or pages poets preach.
This life may be a vale of tears,
A sad and dreary thing—
Three words, and trouble disappears
And birds begin to sing.
Three words, and all the roses bloom.
The sun begins to shine.
Three words will dissipate the gloom
And water turn to wine.
Three words will cheer the saddest days—
"I love you?" Wrong, by heck!
It is another, sweeter phrase,
"Enclosed find check."

## "MAX" AND "MINNIE"

**Do You Know These Elusive Twins?**

Sometimes, after much hunting, one of them will be found, or, when we are thinking of something entirely different, the other will appear unexpectedly; but they never seem so interesting alone. Each needs the other to bring out the fine points of the two.

For instance, "Max"—Maximum Quality, to use his full name, is apt to be extremely uppish and independent without his sister, Minimum Cost, to keep him level; while she, shrinking voilet that she is by herself, becomes a person of some distinction when her brother is with her.

To keep "Max," you must sell high-grade goods, not once a week, but every day, regularly, consistently. But you want "Minnie" to stay, too, and because she can endure nothing but strictest economy, you must watch the Credit Department and sell for cash. Buying in large quantities helps a great deal, too, and "Minnie" quite approves of the no-free-delivery idea, and charges for service.

"Max" and "Minnie" will make many hundreds of friends for you and for themselves. Give them every inducement to stay.

---

## PRODUCTION IS PATRIOTISM

This is the heading of an advertisement of the International Business Science Society. Under this striking and eminently true heading the advertisement takes up the following points:

"When a worker in any position gives to his job less than his best, he is denying himself his greatest opportunity to use and thereby train his faculties and powers.

"Thus he cheats himself more than anyone else, unless he makes his job help him learn as well as earn.

"For work is education—work is development—work is self-expression.

"When labor learns this—when management learns it—there will be no conflict of interests, no scraps, no strikes; production will rise and prices will fall."

The point that should linger in the mind is that "Production is Patriotism." It was patriotism during the recent war, it should be patriotism even in a more personal and co-operative way now that the vast task of world reconstruction is before us. The slogan of every American in this year of grace should be: "Produce to the limit of your powers, and vote for the best interests of your country—all of it, not part of it, all of the people, not any part of the people."

---

"Live, love and laugh—there'll come a time when you can't. The mummy ain't had no fun for more'n five thousand years."

# Selling Electric Washers a Great Indoor Sport

MANY a successful salesman has given as a reason for his success the fact that to him selling is just a great big fascinating game. Just as in wrestling, boxing, football, baseball or any other sport, he would try to pick something big and sensational and get away with it. He would rather make a big sale than eat a chicken dinner—and he did love a chicken dinner.

This sporting idea has been the means of increasing the pep and ginger of many a weary salesman, and with pep and ginger the battle is more than half won.

In the hardware game few items can be pushed in this manner to better advantage than the electric washer. When you have sold one you can consider it a pretty good day's business in itself.

To find the best methods of selling these machines, just take a glimpse into the stores of a few dealers who have pushed them and made a big success. Go into one of these stores and you will find the washers displayed as they should be, looking spick and span, and just like a music dealer displays a grand piano. When people are putting up $125 or so for a washing machine they feel that they are paying enough for that article and that the article ought to be good enough for the dealer to keep it up in shape and display the same as a phonograph or a piano, says Trade Exhibit.

Did you ever notice the care with which a jeweler handles a beautiful diamond or watch, or how a gunsmith shows his admiration as he handles the best gun in his stock? And doesn't that increase the value of the article considerably in your eyes? The same principle can be applied in some degree to almost any article.

The severe shortage of household help was one of his big points. To people who depend upon the washerwoman to come every week, there is the saving in wages; the fact that the washer is not dependent on the weather, for if it rains on Monday it can wash on any other day of the week just as well.

If there isn't time to wash in the daytime the electric works on uncomplainingly at night. It's always on time in the morning—just turn the switch; never has an off day, and works just as hard late in the day as early in the morning.

Think of the selling points you could bring out along this line. There is the saving of clothes; the economy of current, for the electric washer will operate for a fraction of the cost of an electric iron.

Make up your mind to push the electric washer. Put it up in front of your store, where people can't resist the temptation to see how it works. Be ready to demonstrate it—show how easy it is to start and stop, how safe around children, how much labor the power wringer saves. New talking points will suggest themselves with every sale.

### Strong Line to Feature

For display purposes, for demonstration in the window or in booths, for advertising in your local newspaper, few things can compete with the electric washer.

Make up your mind that you're going to sell a bunch of them, at least one a week, or some definite quota. Set a big task for yourself and then see how far you can go over the top. You'll get so you would rather sell an electric washer than eat, and every one you sell would buy you several mighty fine dinners—even at the high prices of food quoted.

If business is a little slack, take that truck of yours, load it up with a few machines, drop them off at the homes of a few good prospects, and let them try the machines a few times. That's the way to go after business. And if you don't the specialty man and the mail order house will sell them right under your nose, as they are doing in many a town right now.

---

One of the best sources of suggestion for improving a store is the outside source, the opinions of those not employed in the store. The man on the sidelines sometimes sees the faults quickest.

---

### THE NEW FREEDOM

No more the Monday morning air
Transmits the rubadub
That used to echo everywhere
From washing board and tub;
And mother doesn't have to strain
Till heart and muscles ache,
Or bravely suffer with the pain
Of nerves about to break.

No longer are we forced to climb
From bed before the sun,
In order that we'll have the time
To get the washing done.
So sister gets her beauty sleep,
And to her great delight
She has no trouble now to keep
Her fingers soft and white.

And I have far more time to burn
Than ever heretofore,
Because I do not need to turn
The wringer any more;
For all these things, you understand,
We're doing by machine
Since father bought an engine and
A tank of kerosene.

# Hardware Sense From a Southern Leader

The fact that Palmer J. Smith, who has written the accompanying article for us, is treasurer of the Beck & Gregg Hardware Co., Atlanta, Ga., is guarantee enough of the importance and value of the article.

The Beck & Gregg Hardware Co. was founded in 1866 and in its more than half century of life it has become a powerful influence on the trade of the South. The company specializes on builders' hardware, carriage and wagon hardware and railway and mill supplies.

Although the policy and methods of the company have been steady, conservative and unostentatious, its relations with the trade have been so thoroughly reliable, so sound and sincere that the name of Beck & Gregg has come to mean service, confidence and satisfaction throughout the South.

Mr. Smith himself has been a member of the institution for the last twenty years, and is sincere and hearty in his love of the trade and his loyalty to the cause of hardware, not only in the South, but throughout the United States. It is for this reason that he has written this article for us, and we take pleasure in passing on his sound words of advice and good sense to the entire trade.

## SALESMAN OR DRUMMER—WHICH?

(By Palmer J. Smith, Treasurer Beck & Gregg Hdwe. Co., Atlanta, Ga.)

The art of salesmanship has reached the dignity of a profession. The essential difference between a salesman and a drummer is the difference between two men, one working from his neck up, the other from his neck down. The constituent elements of salesmanship are intelligence and tact. No man can be a successful salesman, in the truest sense of the word, who lacks either of these qualities.

To roll up a huge volume of business is not always evidence of successful salesmanship. To be a success in the highest and best sense, the salesman of today must render real and lasting service to his house, to his customers and to himself.

If he would reach the highest plane in his line of endeavor he must take the trouble to study and learn clearly every phase of the obligation which he is under to the company who employs him. Business houses now expect very much more of the man who represents them on the road than for him to be merely an order-taker and rightly so.

He has attained a very one-sided development if he sees nothing in his job except to sell a customer all he can as quickly as he can, without stopping to consider or to find out what the customer needs, what basis he has for credit and whether he himself has rendered such intelligent and conscientious service that he will be assured of a welcome on his next visit.

The salesman who is "all there" knows his line from A to Z and back again. He makes a careful study of local conditions throughout his territory. He is able to give the buyer "straight dope" as to what he should buy, when he should buy and in what quantities.

### Customers' Interest at Heart

The country merchant is often lacking either in ability, wisdom or experience necessary to buy a stock of goods. The salesman who, thinking only of his commission, overstocks a fellow of this class does a distinct injury to his house, his customer and himself.

A keen craving for a fat commission all too often leads the short-sighted salesman astray. Such a man does in truth show a deplorable lack of vision. He kills the goose which might have laid for him many golden eggs. How very much better it would be for all concerned if, having learned himself, he would point out to his customer in a tactful way the errors and pitfalls of which he is in danger.

By intelligent and painstaking effort along this line the salesman may often transform an overstocked junk shop into a well ordered attractively arranged store full of goods which are saleable and suited to the needs of the local trade, and by so doing develop for himself and his company a customer who will prove a valuable asset as the years go by.

The slap-dash, hit-and-miss methods of the past have no place in modern business. The man who would attain the fullest measure of success as a salesman must be a student as well. In no other field is there greater need for specialized and constructive effort, and in no other field is such effort more richly rewarded.

## CAUSE OF EARTHQUAKES

In view of some recent earthquakes in certain sections of the country which are likewise oil producing, a darky preacher in Los Angeles may not be so very far wrong in his sermon, heard by one of the HARDWARE WORLD assistant subscriber editors:

"We has received anudder warnin' not to go pesticatin' into de ways ob Providence. De earf, my breddren, revolutes on its axels, as we do now all know, and we all know dar mus' be sumefin to grease dem axels and it takes a right sma't ob grease to do it. So de good Lawd done put de 'troleum inside de earf to keep de axels greased. Den byme bye 'long comes all dese hyah oil companies, punchin' holes down into the bearin's and de oil all come squiten' out. Fust thing we know dar's a hot box, and de earf squeaks and jolts and rumbles and at's de earfquake, and if dey don't quit pretty soon dere won't be no moah grease left and de earf will stick tight on its axels and won't go round no moah!"

# BUSINESS GETTING SUGGESTIONS

## ATTRACTING ATTENTION ARTFULLY

A merchant placed a sign in his window, stating: "Here is the picture of a person we want for a customer." Beneath the sign was a mirror surrounded by a neat frame. The man who paused to look was confronted by his own likeness.

Another little scheme for a window display that attracted much attention was one in an electric goods store. A lamp or a candle was placed in such a way that a powerful electric bulb beside it cast a shadow of these lower power lights on a screen, properly placed. This furnished a splendid illustration of the great lighting power of the electric bulb used, even out of proportion to its real comparison with the other types of illumination.

A merchant gives a rainy weather suggestion. "If a lady comes in during a rain without an umbrella," he says, "we offer one if we have one handy. And we usually do have three or four for that purpose. We believe it is a good idea to have two or three cheap ones around, and we tag them, asking that they be returned at the first opportunity."

A worth while feature in counter display is that of a 5 and 10 cent counter operated on a self-service system. A druggist placed out packages of candy, gum, cough drops, etc., in tempting display, with a metal bank near and instructions for the customer to help himself and drop the money in the slot. This scheme saves the clerk's time and makes it easy for the customer to secure what he wants. There is no reason why this arrangement might not be adopted by stores carrying other lines. Counter and basket goods could be well sold this way by the hardware merchant.

Another merchant has a scheme whereby he has gained the interest of the local community. For twenty years he has offered cash prizes of $10, $5 and $3 to seniors in the high school of that town, who write the best essays on tools. The judges are prominent local professional men. Concerning this fine publicity plan, it may be noted that many of the children of former prize winners and contestants are now contesting for the prizes. Evidently the plan is approved. In respect to the cost, the merchant says that he could not purchase at any price the disinterested publicity which the newspapers give him in connection with his contests.

## LITTLE BUSINESS BOOSTERS

Ideas about training the salesforce seem to swing from one extreme to the other. It seems to one who studies the subject that there should be training, up to, but never beyond, the point where it cramps their individuality—in such matters where it is important they should have individuality. The salesman's proper individuality consists of an individual manner of presenting the firm's individuality. Not for a moment must that firm's individuality be lost sight of; it should be so standardized that no salesperson is permitted to lose sight of it.

Take advantage of the daily weather reports as issued by the Department of Agriculture and place them where all can read, secure same, post and note the interest this will create, besides people will get into the habit of making your store their weather prophet.

Offer to check packages free of charge, no matter how small or large your store, or where located. This little service will be welcomed by the general public.

Whenever business is dull look about for the reason. You will find, as a rule, it is due to some shortcoming such as listed here:

Is the advertising of your store well written?

Is the merchandise desirable as it should be?

Is your assortment as complete as that of your competitors?

Are windows changed as often as those of other stores in your vicinity?

Are your interior lighting decorations and display clever?

Do your signs, placards and price tickets describe the goods fully, and are they bright, clean and well made?

Have you taken advantage of the modern labor-saving devices now on the market?

Do you adhere to old-fashioned methods of handling money, wrapping packages and delivering goods?

Have you instilled in your helpers the fact that they work with you, not for you?

Do you open your store at the same hour daily?

Do you close as late as others?

Is it your aim to send every customer out of your store a friend and a "booster"?

# What Policy Should Merchants Pursue?

THERE is no question of greater moment to the merchant—retail and wholesale—than what policy he should pursue in placing his orders and specifications.

What is the condition of the present market, what is the tendency—how are manufacturers situated—how are the jobbers' stocks—will there be a decline in prices, or will they continue to increase—how soon must orders be placed before shipment can be made?

The average retail merchant cannot personally consult more than a very few manufacturers or jobbers. It is the custom of the HARDWARE WORLD to lay before its readers, the first of each September, trade reports not only from manufacturers in various lines, but from jobbers and retailers.

The retail merchant can thus obtain a comprehensive summary of the situation. He can learn of the actual manufacturing conditions, of the shortage of labor or material, the probable advance or decline in price, the difficulty of obtaining material, of delayed shipments. All of these things are important for the merchant to know, for in the last analysis, each must make up his own mind as to what policy to pursue. No one can do it for him. But if he has available a large amount of information from manufacturers and jobbers, and if he takes into consideration the conditions and times in which we are living, he will be able to gauge pretty accurately what his policy should be.

With this sole purpose in mind, we present to our readers this month and next these reports.

---

## EXPECT HEAVY AND CONTINUOUS DEMAND

Editor HARDWARE WORLD:

We are unable to see into the future, but from present indications there should be a steady and continuous demand for tools of all kinds. In spite of greatly increased facilities we are unable, greatly to our disappointment, to give our customers our usual prompt service.

We cannot foresee any early decline in the labor or raw material markets, and consequently have no reason to believe that there will be an early downward revision in the prices of our product.

The demand for our tools continues very heavy, and the buyer who places his specifications early will be the man who will be assured of his stock for the spring.

Yours very truly,

HENRY DISSTON & SONS, Inc.,

Philadelphia. G. W. Eckhardt, Asst. Mgr. Sales.

---

## NORMAL TIMES NOT HERE YET

Editor HARDWARE WORLD:

Present conditions in general are so bad that we figure it will require quite some time to restore them to anything near normal. We believe that the best policy at present is to carry a good stock, figuring that the portion sold today, at a good margin of profit, will more than offset any decline that may affect the balance.

In our particular line, we do not look for any great decline in prices in the near future.

Very truly yours,

BERGER BROTHERS CO.,

Philadelphia. M. L. Wolfe, Mgr. Sales.

## STEEL AND METAL PRICES WILL NOT DECLINE

Editor HARDWARE WORLD:

With reference to the policy that this company believes should govern the trade, we are pleased to state that it is our suggestion that the trade keep their stock of merchandise as complete as possible, not letting same run down, as we fully anticipate good business conditions to prevail for some time to come. We cannot see at the present time, especially under the existing conditions how lower prices can be anticipated to any great extent.

However, in some commodities, such as foodstuffs and wearing apparel, lower prices seem to prevail in most sections, with a tendency to even become lower, but in the steel and metal business, we as manufacturers have not noticed any appreciable decline in prices.

Yours very truly,

THE L. S. STARRETT CO.,

Athol, Mass. H. E. Masters, Mgr.

---

## NO DROP IN PRICES OF GARDEN TOOLS

Editor HARDWARE WORLD:

As to the policy which should govern the trade in making purchases and placing specifications for the coming season, the writer is of the opinion that the trade should not hesitate to place their business, for we feel that there is going to be no radical drop in prices, especially in the metal line, for some time to come.

The shortage of raw material, we believe, has a strong tendency to keep prices up and the latest developments of the railroad troubles will certainly not help to make conditions any better.

Yours very truly,

Port Washington, Wis. J. E. GILSON COMPANY.

Digitized by Google

# IN A MULTITUDE OF COUNSEL THERE IS WISDOM

## FIND IT NECESSARY TO PROTECT OLD CUSTOMERS

Editor HARDWARE WORLD:

Any information we could give you in reference to the conditions at present and in the immediate future covering the buying policies would apply to our own line only, as we would hardly care to give an opinion covering general conditions.

Almost a year ago we were compelled to adopt the policy of refusing to add any additional business from a customer where they had a reasonable amount on the books, the term "reasonable amount" being defined by the amount of tools we had supplied them in past years.

For the past three years we have consistently declined any business from new accounts, as we felt that our entire output should be divided up among our old trade, basing the amount we supply each on the amount they have had in the past.

Where we have reduced the specifications of a firm to a minimum, we advise them to place additional business so that we can ship as our production will permit, but all orders that we have and all that we are taking are at prices prevailing at time of shipment.

The outlook for a reduction in price in our own line is not at all favorable, as while there seems to be a plentiful supply of labor in this locality there has been no decline in wages and there has been two or three small increases recently in the price of raw material.

Several other unusual factors are increasing production costs, one being the shortage of railroad equipment.

For illustration, at present the steel mills are unable to secure open top cars to load steel and the only way we are able to secure it is to hire trucks and remove it from the mill yards after it has been rolled and have it placed in box cars on a regular wagon siding.

This means an extra handling, entailing an added cost of several dollars per ton.

Even by this method we are able to only secure a portion of the steel that we would require to operate the plant efficiently, and as you know the costs of operating a plant at less than capacity are higher than when working at capacity or nearly so.

As far as our own buying is concerned, we are keeping in as close touch as possible with conditions and buying only far enough ahead to insure our having a supply before our old supply is exhausted and this seems to be the general policy governing the buying of most of the manufacturers.

Yours truly,

CRESCENT TOOL CO.,

Jamestown, N. Y. C. R. Swisshelm, Sales Mgr.

## COSTS IN STOVES AND FURNACES CLIMBING HIGHER

Editor HARDWARE WORLD:

In our line we are of the opinion that anyone who can place his contract for delivery throughout the balance of this year and the first quarter of next year, would be wise in doing so. Whether or not we would care for any business for delivery beyond January 1 is somewhat of a question. Conditions relative to costs are so uncertain in the foundry business that one hardly knows where he is at from day to day.

Costs are gradually climbing higher, due to inefficiency on the part of workmen and a continued demand for increase in wages. You also are aware of the fact that pig iron and coke are very high in price at the present time, and likewise very hard to get.

Yours very truly,

THE HESS-SNYDER CO.,

Massillon, O. F. H. Snyder.

## DON'T SPECULATE, BUT BUY SIX MONTHS AHEAD

Editor HARDWARE WORLD:

Our advice would be not to speculate; to place such orders now as past records indicate will be wanted six months from now, but not over-buy but rather to be conservative. Certain sections of the country no doubt will be affected more adversely than other sections. Farming sections should be the last to feel the effect of the shutting down of certain industries. We think that general advice, such as you ask for, is really not worth much. It is our opinion that buyers of large concerns, as a rule, are wide-awake to all the conditions governing their own purchases and are able to judge regarding purchases for their own individual business much better than we could advise them. It is well for everyone to keep in mind, however, the financial strength of their own concern and their ability to meet all obligations when they place their orders, and orders should not be placed with any manufacturer with the expectation that they can be cancelled later.

The high money rates today undoubtedly will act toward retrenchment of nearly all kinds of business, whether directly or indirectly the shutting down of certain industries will affect us all. The hope of lower prices will undoubtedly be realized in time. However, we feel that inasmuch as all staple products are being manufactured at a small margin of profit, that the tendency downward will be slow and that jobbers need not fear this phase of purchasing if they are financially in a position to take care of all obligations, providing they find themselves over-loading their stocks as naturally would be the case if the public in general respond to the general tendency toward curtailment.

We look forward to a period of readjustment and naturally a letup of business. We are optimists, however, for the general future and believe that a little shaking down will cause the country in general a great deal of good. A taste of a little hard times is necessary to correct some of the extravagances that we have indulged in.

In general, we believe that those who have been wise enough to save, or those who commence now to save, either out of the profits or by turning goods into cash so as to get good cash balances in the bank, need have no particular fear of the future so long as they keep on a good, sound, financial basis, but we strongly advise those who are long on goods and short on cash to change their methods, look carefully after their collections and get on a sound basis as quickly as possible.

Very truly yours,

SIMONDS MFG. CO.,

Fitchburg, Mass. J. E. Kelly, Gen. Sales Mgr.

## DELAY RESULTS IN INCREASED PRICES

Editor HARDWARE WORLD:

We are and have been placing orders for material, anticipating orders regardless of price, which is, in our judgment, the proper course to pursue, not only in material but in the finished article at present prevailing price. We find where we delay purchasing we have to pay additional price and create additional uncertainty, influencing determination on our part to play the game to the extent of supplying the demand, which we figure will be normal at least at the best price prevailing.

To do this we must anticipate as much as possible, which we believe in, instead of delaying with the hope of obtaining lower prices.

Yours very truly,

F. E. MYERS & BRO.,

Ashland, Ohio. F. E. Myers.

# "WHAT POLICY SHOULD MERCHANTS PURSUE?"

## NO POSSIBILITY OF LOWER PRICES IN TOOLS

Editor HARDWARE WORLD:

Our line, as you know, is tools, and we have been following the general trend of business very closely for the past few months, and as far as we can see there is no possibility of any lower prices in the tool industry for fall or spring business.

Owing to the situation of the money market at the present time, there is naturally a spirit of caution prevailing among the trade, but the fact remains that there are no stocks of tools in the country and we do not believe there is any likelihood of any surplus stocks developing in the immediate future.

It is also our opinion that jobbers and dealers cannot expect very much better delivery than in the past and in order to be assured a stock of goods for fall and spring it will be necessary to anticipate requirements. Right at the present time the coal situation is of course one of the absorbing topics of discussion and it would not be at all surprising if there was a more general closing down of industries this winter than prevailed last winter, unless there is a marked improvement in the coal situation within the next few months.

The above of course is simply our opinion, but we are frank to admit that we are inclined to be optimistic in regard to conditions affecting the hardware trade and we do not believe that the time is in sight when price should be a determining factor in placing business.

The hardware trade should remember that due to the labor situation there has not been as great a production since the armistice as there was five or six years ago and consequently there has been no possibility of accumulating any surplus stocks.

VAUGHAN & BUSHNELL MFG. CO.,
Chicago. Irving S. Kemp, Sales Mgr.

## BUYERS CAN HELP MANUFACTURERS BY ANTICIPATING REQUIREMENTS

Editor HARDWARE WORLD:

While we feel that one man's guess is just about as good as another's, and while no one really knows what the situation is going to be, nevertheless, the increased cost of raw material items and the increased cost of transportation facilities will of necessity force the manufacturers to advance their prices accordingly, as these increases become effective.

The buyers can materially help the manufacturers by anticipating their requirements as far in advance as possible, because it will enable the producers to render better service to the buyers and supply them with sufficient material to take care of their requirements.

We can see no indication of a reduction in prices, but it looks very much as though prices will still go higher and the writer really believes that higher prices will prevail during the next six months than at any time during these abnormal price periods. Prices are high, but we believe they are going higher, as we experience advances in prices whenever raw material items are being replaced.

This is only our opinion of the matter based upon conferences with other producers in other lines. Publication of these viewpoints will be of interest to us and we will be very glad to have the copy of your publication carrying this information.

Sincerely, yours very truly,
THE YOST GEARLESS MOTOR COMPANY,
Springfield, Ohio. By B. F. Downey, Sec.-Treas.

## BUSINESS AS USUAL, BUT NO LOWER PRICES

Editor HARDWARE WORLD:

As to the policy which governs the wholesale and retail trade in making their purchases and placing their specifications for the coming season, would like to say that there is every indication in our business that prices of our product will have to be maintained at present high levels for many months to come and there are strong possibilities that some further advances will have to be made to insure us a reasonable profit.

We do not consider that the trend of the market is downward, for on lines kindred to our own we have not heard of any reductions in prices and if so we would not consider it important as there is really no basis for reducing prices, excepting in some few instances where manufacturers may have made their prices higher than they were warranted and in such instances they may have decided to reduce them.

It is extremely difficult to secure our materials. We are paying higher prices for steel than we did three months ago. Our labor is being maintained on the same level as for the last several months and in many instances we have been obliged to make advances. The cost of living continues as high as ever in this section, with very little chance of any relief for a long time to come.

We would advise both jobber and dealer to anticipate his requirements as far ahead as possible, ordering reasonably liberal quantities and making allowances for any delays in transportation, etc., and if everybody will go along about their business and not spend so much time endeavoring to start a panic and quit talking business depression, we will all be better off and go on with our business as usual.

Yours very truly,
THE BRIDGEPORT HARDWARE MFG. CO.,
Bridgeport, Conn. Harry B. Curtis, Treas.

## WISDOM TO PLACE ORDERS NOW

A recent survey of trade conditions made through our branch sales office, extending from the Atlantic to the Pacific, plainly indicates that prospects for good business are rapidly improving rather than otherwise.

We find great trouble in securing material enough to keep our production up to the level which is necessary to execute even 75 per cent of the orders which are coming to us at this time. Beyond doubt buyers of hardware who anticipate their requirements by placing orders now for all of their actual wants up to January 1st will be exercising the wisdom of superior judgment. The difficulties which are now confronting us, we believe, will continue for three or more years and that our great problem will be to satisfy demands of the trade. In short, we predict that it will be worse in the near future than during the war period, and our conclusions are drawn from every indication which is now looming up on the business horizon.

The prospects in the south especially have greatly improved of late. Some weeks ago we received a few cancellations, but 90 per cent of the orders have since been reinstated and additions to the original have been made. Unless all signs fail, there is going to be a greater demand in the south for goods this fall than ever before, and we are optimistic enough to believe that the same conditions will extend throughout Uncle Sam's entire domain.

Sincerely yours,
NORTH & JUDD MFG. CO.,
New Britain, Conn. H. C. Noble, Pres.

# CAN'T MAKE A PROFIT UNLESS YOU HAVE GOODS

## NO TIME TO SPECULATE, BUT KEEP STOCK NORMAL

Editor HARDWARE WORLD:

We do not care to give any advice, as such, but have no hesitation in giving our opinion based upon a careful study of conditions which we think are liable to influence builders' hardware.

This is obviously no time for speculative buying, but as far as the hardware items with which we are familiar are concerned, fundamental conditions are such that dealers can, we believe, confidently buy normal stock requirements. The tendency in hardware is still upward, and, as we see it, it will be so for some time to come. Very truly yours,

THE STANLEY WORKS,
New Britain. P. F. King, Asst. Sec.

## HARDLY KNOW WHICH WAY CAT WILL JUMP

Editor HARDWARE WORLD:

To be frank the writer is in the position, I feel, of most business men, that is: We hardly know which way the cat is going to jump. It would seem as though most people were buying from hand to mouth, which of course is a bad state of affairs, but I presume they are figuring that it is playing the game safe, but we all know it does curtail business.

While some lines of industry seem to be very much depressed, the steel metal lines are in better shape, and we cannot help feeling that if transportation facilities were in better condition, the fall business should be almost a boom. Yours truly,

DIAMOND SAW & STAMPING WORKS,
Buffalo. John T. Ronan, Vice Pres.

## STOVE MANUFACTURER ANALYZES SITUATION

Editor HARDWARE WORLD:

We do not wish to be quoted in the matter for very good reasons that we cannot explain without going to considerable length.

Our advice to the trade would be to try to keep on hand a fairly good stock of merchandise. We do not mean by this that they should plunge and overload, as has been the practice during the past year or more in anticipation of advancing prices, but we believe that every merchant should protect himself by having a fairly good assortment of stock on hand.

We advise this, not because of expectation of heavy price advances, but because of difficulties that manufacturers continue to have in securing raw materials. In our own case, as in the case of hundreds of other manufacturers, we are still unable to keep our production equal to the demands made upon us by our customers. Not because of lack of capacity in our factories, but because of inability to secure materials.

We believe that prices have not yet reached the peak. It is true that in some lines, particularly textiles, there is apparently a tendency to lower prices, but conditions in that line are very different from those in the metals line, and for the latter can see no chance for any reduction so long as the mills and furnaces are experiencing their present difficulties in supplying the demand.

Those merchants who allow their stocks to become depleted in the hope that before they are forced to renew them prices will come down will be disappointed not only in the matter of prices, but particularly in the matter of deliveries, for we feel they will not be able to restock their line without losing a portion of business they could obtain if they had a stock in their warehouse. Yours very truly,

## SCISSORS AND SHEARS PRICES WILL NOT DROP

Editor HARDWARE WORLD:

As far as scissors and shears are concerned, there is absolutely no prospect of any reduction in price, as four-fifths of the cost of manufacture is labor and there is no indication that cost of labor is to decrease immediately, nor within the next several months.

We are quite confident that wise buyers are anticipating their requirements at least three to four months ahead on the purchase of scissors and shears, realizing the large number of unfilled orders on hand at the factories, together with the fact that there being no prospects of lower prices they will be protected by having stock on hand. Yours very truly,

THE ATLAS SHEAR CO.,
Bridgeport, Conn. F. H. Duncombe.

## PRICES WON'T DROP WHEN MATERIAL IS SCARCE

Editor HARDWARE WORLD:

As far as we can judge, there is no opportunity to reduce prices on articles made from wire and steel, as there is still great difficulty in securing these materials and prices do not generally drop on materials that are scarce or hard to get.

In our own case, orders are coming in in good volume and we believe there will be a steady demand for manufactured metal goods for some time to come at about prices ruling today. We do not look for any great advances in materials, notwithstanding the difficulty in securing same. Yours very truly,

ATLAS MANUFACTURING CO.,
New Haven. A. M. Brown, Treas.

## CAN'T MAKE A PROFIT UNLESS YOU HAVE GOODS

Editor HARDWARE WORLD:

It seems to us that wholesale and retail hardware men should place orders for their normal requirements for the coming season, much as they did before conditions became unsettled.

After all, you can't make a profit unless you have the merchandise to sell.

An unreasonably conservative policy on the part of buyers now will defeat their own end by leading to a greater shortage of merchandise and still higher prices.

Hardware manufacturers can hardly be expected to arrange for supplies of material unless they have orders on the books or in sight that justify them in doing so. Nor can they be expected to take all the chances as to prices.

Most manufacturers guarantee prices against their own decline to date of shipment, which should be ample protection for wholesale and retail dealers. Even where goods are bought at prices ruling at date of shipment, competition will make it certain that the price finally announced will be reasonable, costs of material and labor considered. For a manufacturer with a large plant investment and a force of men depending upon him for their living, will, even in times like these, make prices that will keep the wheels turning.

Here in the central west, we are in the midst of a wonderful small grain harvest. The prospect for a bumper corn crop was never better. Even though these crops will not find their way to market as quickly as they used to do, this new wealth will undoubtedly stimulate all lines of business.

Yours very truly,

F. D. KEES MFG. CO.,
Beatrice, Neb. J. A. Kees, Treas.

# "WHAT POLICY SHOULD MERCHANTS PURSUE?"

## CONTRACTING FOR YEAR'S SUPPLY AT ADVANCE PRICES

Editor HARDWARE WORLD:

We can only advise that we are preparing for a normal year's business in 1921, and making contracts, as far as possible, for a year's supply of such items, as bolts, screws, steel, malleable and gray iron castings, as we use in the manufacture of our product.

We are not able to cover our supposed wants, even at present prices, which in many instances are higher than they were three months ago when we began to figure out what it was going to cost us to make mowers for the year 1921.

Many of our orders are entered for shipment at market prices. We feel that, while there may be a recession within the next months in many of the textile lines, clothing, boots, shoes, carpets, rugs and other fabrics, due to the enormous advances which all these lines acquired during and after the war, that the same conditions do not prevail in the "Hardware World."

Advances on most lines of hardware have been less spectacular than in the other lines, and for this lack of high altitude, the lawn mower line has been conspicuous. Very truly yours,

PENNSYLVANIA LAWN MOWER WORKS,

Philadelphia. J. S. Bonbright, 2d Vice Pres.

## CORDAGE MANUFACTURER'S CONSERVATIVE STATEMENT

Editor HARDWARE WORLD:

We can see a more conservative plan of buying by the jobbers, which we believe is also reflected in their trade with the retailers. We ourselves do not sell the retail trade, so that we cannot give direct information regarding them.

It would appear generally speaking, as though prices had reached their crest, although there are some commodities that are still advancing, and with the advance in freight rates, which will be effective shortly, it will be necessary to make other advances to absorb this freight advance, unless the commodity itself, declines in the meantime.

We ourselves are not opposed to the conservative plan of buying, believing it to be the safest method, particularly at this time. On the other hand, we do not favor any wholesale cancellation of orders, nor any such high-handed methods. We believe that orders once placed, should stick, and we ourselves have not suffered from such cancellations.

Such lines as clothing, woolen and cotton goods, and shoes, seem to be more affected at this time than any other line, probably because these lines have been more inflated in value than most other commodities, and a downward trend in the market, always suggests conservative buying.

We are not pessimistic about the outlook. We believe the country is sound financially and otherwise, and we would not attempt to rock the boat nor get excited if the demand for our goods fell off to such an extent that we began to fill up our warehouse, as we would have perfect faith that eventually this demand would come back, because in our line at least, namely, rope and twine, there is no surplus of material in the manufacturers hands, the jobbers hands, the retailers or the large consumers.

---

A. A. Monnett of the Monnett-Hamilton Hardware Company at Dayton, Washington, has been elected a director of the Inland Automatic Thresher and Machinery Company, Ltd., at Post Falls, Idaho. The company has three manufacturing plants at Post Falls and is in a prosperous condition.

## RUBBER MANUFACTURER GIVES COMPREHENSIVE SUMMARY

Editor HARDWARE WORLD:

Our advice to the trade handling mechanical rubber products is to purchase and place specifications well in advance, for the following reasons:

First—Give the manufacturer time to purchase and get his raw materials. Mills producing such are overcrowded and slow in operating. Transportation lines are also congested, and it consequently takes a long time to receive these materials even after they are started from the source of supply.

Second—Mechanical rubber goods in themselves constitute a staple product, turning the wheels of industry and supplying essential commercial needs.

Third—Cotton fabrics, of which they are very largely composed, are also made of nature's most staple product, and the present cotton crop promises to be comparatively short and of none too good quality at that. Furthermore, the supply left over from last season is like all rag-and-tag ends, poor, and will show substantial shrinkage.

Fourth—Every cotton mill in the country has been and is still overcrowded with work. Fabrics for luxurious and extravagant living can well be dispensed with. The staple lines which contribute to industrial and commercial life will continue in demand. The calls from the Orient are increasing, and the European rehabilitation needs are beginning to crowd in upon us, so that all mills fabricating cotton will have their schedules and budgets filled up as soon as the cotton crop figures are obtainable.

Fifth—With such prospects ahead of us, there is very little likelihood of any recession in prices of mechanical rubber products, any hesitation on the part of the buyer to purchase and specify for the goods he expects to use in his business is not only calculated to prove a boomerang, but to use a war expression, such merchant is a "slacker"; he is just one of those who is contributing to the congestion of industry and transportation. If instead of personal fear he will have faith and confidence not only in his own ability but in the whole industrial life of this country and act accordingly. there will be cooperation and not congestion, there will be efficiency and not waste, and there will be satisfaction and not dissatisfaction.

Consequently, in our opinion the trend of the market in mechancial rubber products is upward rather than downward, and the merchant who adopts the policy of "patient waiting" is the one who is halting the wheels of industrial progress; is by his inaction allowing sand rather than oil to sift into the gear boxes, and is the one whose patience is destined to turn to impatience when the time of need comes. The remedy is not denunciatory of transportation companies or manufacturers, but is prophylactic and lies very largely in his own hands. Very truly yours,

BOSTON WOVEN HOSE & RUBBER CO.

Boston. E. E. Fey, Asst. Gen. Mgr.

## KNOWS IT IS TRUE, BUT AFRAID TO SAY IT

Editor HARDWARE WORLD:

Our conception of trade conditions pertaining to our line is as follows, which quotation we would, however, not wish to make over our signature:

"Waiting for lower prices in metal products will slow up production."

If stocks are as low in every line as ours this will cause an increasing firmness in price.

CUTLERY MANUFACTURER.

Digitized by Google

# MOST MANUFACTURERS PROTECT AGAINST PRICE DECLINE

## KEEP STOCKS OF FIREARMS COMPLETE

Editor HARDWARE WORLD:

It is our judgment that a program of conservatism should be followed by wholesale and retail dealers. The conditions existing justify keeping stocks complete and encouraging every effort to turn them as frequently as possible, rather than pile up accumulations.

Yours very truly,
COLT'S PATENT FIREARMS CO.,
Hartford, Conn. S. M. Stone, Vice Pres.

## DIFFICULTY IN GETTING AXES AND TOOLS

Editor HARDWARE WORLD:

We can only give you the facts in connection with our own line, which is the manufacture of axes, logging tools and drop forgings. We find that we are obliged to pay over three times as much for steel of all grades as we were obliged to pay for the same material prior to the war, and we find it difficult to obtain steel even at this high price.

Skilled labor we find very hard to obtain and on account of the short working hours it is impossible to turn out a fair day's output, and it has been necessary to advance wages several times.

From present indications we cannot see that these items are liable to cost less during the present year, and the natural conclusion is that the trade is entirely safe in purchasing axes and logging tools at present prices, and what in our opinion they should be most concerned about is the possibility of their being able to obtain these tools from the manufacturers.

We have been refusing anything but small sorting up orders for axes for the past several weeks, as our present unfilled orders will tax the capacity of our axe department well into next year, and as costs in our line are steadily mounting, we would not be surprised if it would be necessary to advance prices.

Very truly yours,
WARREN AXE & TOOL CO.,
Warren, Pa. H. P. Stone, Gen. Mgr.

## NO DROP IN PRICES EXPECTED

Editor HARDWARE WORLD:

Conditions in the steel manufacturing circles have not changed. Transportation is exceedingly bad and wages have not come down. As we view the situation we cannot see how prices will drop this year, as there is still a stiff demand for all classes of hardware.

We cannot see how it is going to be possible to reduce costs until the cost of living is reduced and production catches up with demands. We do not look for lower prices until spring of 1921 at the earliest, and it can only be at a gradual decline over period of years.

We believe dealers should place their orders and specifications immediately for their winter requirements, as no one can foretell today what transportations are going to be during the cold weather months.

Our policy is to give our customers every advantage of price which we are able to make, based upon fundamental conditions over which we have no control and will welcome a more suitable price basis worked out on improving manufacturing conditions covering raw materials and labor particularly.

Very truly yours,
THE BASSICK COMPANY,
Bridgeport, Conn. A. E. Belisle.

## TACK PRICES TEND UPWARD

Editor HARDWARE WORLD:

While the newspapers have much to say about the trend to lower prices and while this seems to be warranted at the moment by the condition of the textile and shoe and leather trades in particular, so far as we are able to judge it does not apply to the metal trades, especially where steel is the most important factor.

The last advance in our prices occurred in March, since which time we have been absorbing the increased cost of labor (two advances in wages having occurred meanwhile), the increased cost resulting from shortage of material due in turn to the shortage of cars; the premiums which we are obliged to pay for steel in order to keep our plant running to somewhere near its capacity, notwithstanding the fact that steel contracted for in October last is yet due us, and the definite advances which have been made in certain lines.

We have recently contracted for rivet rods to meet our partial requirements for the last half of the year, at an advance of 33 1-3 per cent, with no positive assurance that we will get the material as needed.

Taking these facts into consideration and the prospective freight increases, we can see no other outcome than higher prices for the goods which we manufacture.

We have offered our competitors all or any part of an order for 2000 tons of tacks, at their current prices if made to equal our product, solely for the purpose of giving better service to our customers, and have been able to secure from them but two carloads in the last two months.

So far as we are advised, all of our competitors are in much the same position as ourselves, being oversold, although our orders are taken subject to our prices ruling at the time of shipment.

Our class of product is very scarce in the hands of both jobbers and retailers and we would say therefore that the trend of prices is upward rather than otherwise and will be so for the remainder of the year.

Very truly yours,
ATLAS TACK CORPORATION,
Fairhaven, Mass. Wm. F. Donovan, Pres.

## REPUTABLE MANUFACTURERS PROTECT AGAINST ANY PRICE DECLINE

Editor HARDWARE WORLD:

After careful consideration, it is our honest opinion that if prices do increase during the next few months, it will be due to a very marked shortage of steel, much more so than at present.

We do not honestly believe there will be much increase in wages, as that situation is becoming adjusted, due to the fact that labor is easier to obtain now than previously. We do not, on the other hand, believe there will be much decrease in price unless business becomes such that manufacturers begin to cut each others throats in order to obtain orders.

We do not believe that any hardware man would make a mistake in placing his order with a reputable manufacturer who would guarantee to allow him the benefit of any decline which might result, and that will take his order for from one to three months in advance, as we believe that specifications should be placed at least four months, and if possible six months, in advance, as we find ourselves averaging from four to six months behind on orders—some less than that, and some even further behind.

Yours very truly,
BURGESS-NORTON MFG. CO.,
Geneva. C. M. Burgess, Sales Mgr.

# "WHAT POLICY SHOULD MERCHANTS PURSUE?"

## ACTUAL SHORTAGE IN BRUSHES

Editor HARDWARE WORLD:

In regard to the buying policy of wholesale and retail dealers, insofar as paint and varnish brushes are concerned (as these are the kinds of brushes we manufacture), understanding the brush situation as we do, we would say that a man who buys now for delivery as soon as possible, the brushes which he expects to sell next spring, is the wise buyer. We do not look for any advance in price on our brushes in the near future, but as you probably realize there is an actual shortage of brushes now existing in the country, and the question with our customers is not one of price, but whether or not they will have the brushes.

We have not taken on a new customer for over a year. We have increased our production capacity over 300 per cent over what it was a year ago, and are still unable to supply the demands of our old customers. There simply is not enough paint and varnish brushes in existence to supply the demand for them. And with all factories working to capacity there does not seem to be much of an impression on this demand.

The principal difficulty which we now have is in obtaining all raw materials which are used in the manufacture of brushes, with the possible exception of bristle which comes largely from China. The other materials which are made in this country, are very hard to get in sufficient quantities to keep our own organization going. We do not know why this is true, unless it is because we have built up our production capacity faster than the people who supply us with raw materials.

We have gone into this matter rather in detail, and, of course, are writing only about our own experience.

We would not care to have you publish what we have told you word for word, but do not object to your using any of this information as a basis for anything which you may wish to publish. Or if you prefer to have an article written as to the conditions existing in the brush industry, to be published in your fall buying issue, and will so advise us, we will be glad to write such an article to be published over our name.

Very truly yours,

THE WOOSTER BRUSH CO.,

Wooster, Ohio. C. P. Foss.

## NO DECLINE IN PRICES LIKELY

Editor HARDWARE WORLD:

We have been out soliciting future orders since July 1st, and find the trade very willing to buy and at advance prices. The trade certainly is justified in this because we are finding it very difficult to get material even from firms where we have been buying regularly for the past six or seven years.

At present we are placing a contract for malleable castings with a firm we have been dealing with for six years and the best delivery we can get is four to five months. This means, of course, that unless garden plows are bought now there will not be any to be had next spring.

Unless something unforeseen happens there certainly will not be a decline in prices when the above condition exists in the raw material market, e. g., running at about one-half capacity or less and from four to five months behind with orders.

While raw material prices fell considerably just after the armistice, they are now fully 50 to 75 per cent higher than they were during the war.

Very truly yours,

ALEXANDER MFG. CO., Inc.,

Ames, Iowa. By C. O. Alexander, Supt.

## MORE A QUESTION OF MERCHANDISE THAN PRICES

Editor HARDWARE WORLD:

To my mind the important thing for the merchant to do, whether he be retailer or jobber, is to get the business and be in position to deliver the goods. It's more a question of merchandise than of prices. Sitting on the fence watching for prices to go down won't get a real merchant anywhere.

Without doubt we have reached and passed the "peak" of commodity prices taken as a whole, but the bottom isn't going to fall out of the markets by any means. In general agricultural and industrial conditions are favorable and there is bound to be a good demand for merchandise of an essential nature. Opportunities for sales should be good and the way to cash in on them is to have the merchandise rather than a stock of opinions and theories about prices.

The time has passed when a merchant could "buy his head off" and increase his profits through doing it. However, this doesn't mean that a waiting and watching attitude is advisable. Merchandising isn't speculation; it's a matter of selling and delivering goods at a profit on the service.

Prices on most of the items that a Hardware merchant handles are not likely to fall off to a great extent. The prices of all metals are much steadier than other raw materials, textiles, foodstuffs, etc. It should be a safe course to have a sufficient stock on hand to meet all likely demands and to place orders ahead to an extent that will offset slow shipments and congested transportation such as have been the rule for such a long period and likely to continue. If a merchant keeps his stock well assorted and reasonably full as to quantity, he will be "playing safe," regardless of prices. Then he will be in position to supply the regular demand which gives every promise of being healthy and active.

In hardware and allied lines there appears to be no such accumulation of raw materials and finished products as was recently the cause of price slashing in textiles, wearing apparel, shoes and some distinctly luxury lines.

It is well to remember that ordinary recessions in the market prices on some basic commodities cannot cause a great cut in the price of finished merchandise where the cost of labor and general operating expenses make up an important part of the selling price. Wages, operating costs, "overhead," interest, packing and shipping charges, transportation all cut an important figure in the price of a finished piece of merchandise, such as a hammer or a can of paint. These are not likely to recede for a long time, even though the markets on basic raw materials may show weakness from time to time.

Business should be good this fall and winter, and the thing is to "go to it" with judgment, confidence and energy. The experience of the past six years should enable a merchant to meet and to master any condition that is likely to arise during the next six months and to "come through" in good shape. The worst never happens and it certainly isn't going to this fall.

Yours very truly,

MONTAUK PAINT MFG. CO.,

Brooklyn. Frank E. Cornell, Sec.-Treas.

## PLACE ORDERS AT ONCE

Editor HARDWARE WORLD:

Our recommendation is that dealers place orders for their requirements, in the furnace line at least, at once.

Yours very truly,

L. J. MUELLER FURNACE CO.,

Milwaukee. W. I. Maxwell, Mgr. Sales.

Digitized by Google

# NO TIME TO SPECULATE, BUT ANTICIPATE REQUIREMENTS

## BUSINESS AS USUAL

Editor HARDWARE WORLD:

First of all, we must state that it is nearly impossible to induce anyone to go on record in giving advice on the markets for the coming year. However, as usual, we have carefully studied the markets and in our own way have definitely decided just what to expect in change of prices on raw materials.

We use two distinct products, namely: Cotton duck and galvanized steel sheets and wire.

From all reports we have been able to obtain and study, the cotton crop is slightly below the average. During the past month this commodity has been rather unsteady, but nearly all those who are dealing in cotton believe that the bottom has been reached and it will remain stationary or possibly show small gains.

Many shrewd business men are divided in their opinion on the prices of steel, some say that we may expect a decline as early as this fall, others cannot see any relief for at least another year. The Steel Corporation has unfilled orders totaling 11,000,000 tons of steel and as their estimated production is 1,300,000 tons per month it will keep them busy until next March or April. This, with the demand for steel, will no doubt make present prices firm for some time to come.

In advising the trade when to purchase our products, we must mention that we manufacture the "Easy Emptying" Grass Catchers and Detachable Hose Reels. The materials must be purchased at once to safeguard the supply of these articles for the coming year. The fact must be taken into consideration that only light gauge galvanized steel sheets are used in their manufacture, and as the mills are endeavoring to roll only the heavier gauges, we must protect ourselves earlier in the year. The price of raw materials may drop slightly, but as our articles must be delivered during the coming winter and our sales practically use our maximum production, we cannot delay in manufacturing these articles. We believe therefore that prices we just issued will remain stationary, or may slightly increase.

The writer has had the opportunity of talking with a few of the largest buyers of hardware in the West and they stated that they were placing orders for their spring goods, as they could see no decline soon enough to affect their prices and they wanted to make certain of their supply. A true saying is: "You cannot sell when your warehouse is empty."

However, all merchants should use caution in purchasing their supply of spring goods and not overbuy. Business as usual will be good in the Northwest and the volume should hold up well in comparison with last year.

Yours very truly,

THE SPECIALTY MFG. CO.,

St. Paul. E. J. Hager.

## DON'T SPECULATE, BUT PLACE ORDERS NOW

Editor HARDWARE WORLD:

We see no possibility for any material decline in prices during the balance of this year. We anticipate a very heavy demand for merchandise in the last three or four months and a greater scarcity than has heretofore appeared.

We therefore think it behooves the trade to anticipate their wants for the balance of this year at least, and get their orders placed at the earliest possible moment.

We would not advise speculative buying.

Yours truly,

TUCKER DUCK & RUBBER CO.,

Ft. Smith, Ark. H. T. Tucker, Pres.

## GREATER DEMAND THAN SUPPLY

Editor HARDWARE WORLD:

Our advice would be that under present conditions they should place their orders at present prices providing they are guaranteed against any decline prior to date of shipment.

The car shortage and the general railway situation are such that it is almost impossible for the manufacturers to either secure the material or make shipment after the goods are produced, and there being practically no stocks in the hands of the distributors, we find fundamental conditions, other than the railroad situation, healthy. There is going to be a greater demand for goods than the manufacturers are able to produce.

We predict easier labor conditions.

The business of this country today seems to be limited only to the ability of the railroads to handle the product.

Yours very truly,

UNITED STATES CHAIN & FORGING CO.

C. M. Power,

Pittsburgh, Pa. Vice Pres. and Sales Manager.

## CUTLERY WILL BE HIGHER AND SCARCER

Editor HARDWARE WORLD:

We are fully convinced that the cost of cutlery will necessarily be higher than at the present time, and that prices, generally, must positively tend upward.

There is no relief in sight. The manufacturers have sufficient capacity, so far as concerns buildings and equipment, to take good care of all demands being made upon them, but they are not running at more than two thirds capacity. There is a very great shortage of labor and labor is not up to its former efficiency. Cutlery steel has advanced within the past thirty days, and other materials have recently advanced. We believe that there is absolutely no relief from high and higher prices until labor is more efficient and production is increased so as to be equal to the demand.

We would, therefore, recommend that both the wholesale and retail trade keep their stocks as full as possible. At present their stocks are greatly reduced and we can see no possibility of their being able to bring them up to normal for some time to come.

Yours truly,

ONTARIO KNIFE CO.,

Franklinville, N. Y. J. L. Burritt.

## MANUFACTURERS CANNOT AFFORD LOWER PRICES

Editor HARDWARE WORLD:

While the present slowingdown in buying has been quite noticeable, yet it has been our opinion that this was due largely to the usual dull season of the summer months and the more cautious policy of a portion of the buyers because of the political situation.

We do not believe that the manufacturers of steel and iron goods can well afford to offer their ware at any lower prices for some time to come, and while we would not suggest the purchasing of material for any great period in advance of the present requirements, yet we feel that the buying should be kept up, ordering in stock quantities rather than to expect the manufacturer to retain the stock and ship material direct to the consumer at the request of the jobber, which is very often the case during a period of unsettled conditions.

Yours very truly,

BARTLETT MANUFACTURING CO.,

Detroit. H. S. Bartlett.

Digitized by Google

# "WHAT POLICY SHOULD MERCHANTS PURSUE?"

## LINES THAT INCREASED RAPIDLY WILL ALSO DECREASE IN SAME RATIO

Editor HARDWARE WORLD:

In general, we should say that it would be good policy for the hardware trade to keep in mind at all times when buying the probability that prices will gradually decline during the next two or three years. It strikes us as advisable, also, for the hardware trade to familiarize themselves with the percentage of increase in various lines, as it is most probable that lines that have shown the greatest percentage of increase will likewise show the greatest percentage of reduction.

In our own particular line of electric incandescent lamps, the increase in the present list prices over 1915 amounts to approximately 33 per cent. As a result, we do not anticipate any decline in the list prices on lamps for at least a year.

We certainly would advise against the trade delaying placing orders now, in the hope of obtaining lower prices; for, in general, there is an under-production of goods at the present time, and if manufacturers do not receive orders, they will, naturally, close up their plants rather than take business at a loss. This in turn will in the end result in substantially higher prices, because of the increased shortage of goods.

Also, any buying policy at the present ought to give due consideration to the probability of serious transportation congestion during the coming fall and winter.

Very truly yours,

HYGRADE LAMP CO.,

Salem, Mass. E. J. Poor, Sales Mgr.

## BUY AS IN NORMAL TIMES

Editor HARDWARE WORLD:

The idea of this company is that it would be well to buy well in advance of actual needs, but not to stock up a half year's supply or more. In other words, buy as you would in normal times, only buy some two or three months before you actually need the stock.

In most lines there will undoubtedly be a shortage before the end of the year. As far as our product is concerned, we are still far behind in our orders and see no immediate chance of catching up, although we have increased our factory space and are making every effort toward increased production.

The labor situation, coupled with the car shortage, is the reason why we advise buying some months in advance of actual needs.

Yours very truly,

THREE IN ONE OIL CO.,

New York. J. N. H. Slee, Jr.

## EXPECT ADVANCES IN HICKORY HANDLES

Editor HARDWARE WORLD:

Speaking of hickory handle purchases it would be most advisable to send in small orders for quick shipment, thus getting fresh stock, factories being short of stock they would be more liable to get the small orders filled than larger ones.

As to price for the future, that is beyond our knowledge, as it would be largely governed by the actions of agricultural and automobile purchases of hickory dimension stock, should they reduce their purchasing then the handle factories would buy raw material cheaper, should they continue to take all hickory available then the price of hickory handles would no doubt have to be advanced.

Very truly yours,

Hope Ark. IVORY HANDLE CO.

## PROTECTING BUYERS AGAINST ANY DECLINE

Editor HARDWARE WORLD:

There will unquestionably be in certain districts a letup on a demand for household labor saving appliances. This will be particularly true in localities depending on industries who are laying off a large quota of their men, as the reduced purchasing will speedily reflect itself not only on the immediate men affected but also on the dealers in that community. In lines which have shown an abnormal increase in prices, there will be a corresponding reaction.

On our line this, however, will not be the case, as the price for 1913 shows but a 30 per cent advance, whereas the material and labor shows two and three hundred per cent, and we are assuring our dealers that they are protected in buying Simplex Ironers against any decline in the price of this product as we know that this will not be possible.

On the other hand, should production be curtailed, which we do not look for, it would unquestionably mean an increase in price, as the only reason we have not advanced in proportion to labor and material has been in the economies in production in a greater volume, but we are requesting all our dealers to watch their collections closely as also their credits.

Very truly yours,

AMERICAN IRONING MACHINE COMPANY,

Chicago. H. G. Grosse, President

## NO REDUCTION POSSIBLE IN FIREARMS

Editor HARDWARE WORLD:

As to what we believe to be the trend of prices, for the coming six months, would say that we see no present indication of any sort where conditions would make it possible to lower our prices during the balance of the year, and further we do not believe that in such a product as our own where labor forms such a vital element of the cost that there is any possibility of reductions during the next six months.

Furthermore, with the increases which are contemplated in the transportation field, and the increases recently allowed on coal, it does not seem reasonable to expect any reduction of present prices.

This is given to you personally in reply to a request for our opinion on the subject, and we do not wish to be quoted personally.

Our advice to wholesalers and retailers taking into consideration transportation delays and furthermore the current advances on material, which they need for the seasonable requirements of their customers, that they place their orders as far in advance as possible in order to avoid unlooked for delays at a time when they they most need our product.

## PRICES WILL BE HIGHER THIS FALL

Editor HARDWARE WORLD:

We cannot give any policy on other merchandise with the exception of our own, but we can assure you that the prices on our machines, in fact all washing machines, will necessarily be higher this fall than they are at the present time, as the prices of wringers motors, etc., are continually going up, and naturally the price of machines must go up at the same time.

We believe that it would be very wise indeed for all merchants to buy washing machines at the present time, not only to protect themselves on prices, but also to assure delivery.

Very truly yours,

VOSS BROS. MFG. CO.

Davenport, Iowa. E. F. Voss, Sales Mgr.

Digitized by Google

# MERCHANDISE THAT ADVANCED QUICKEST WILL FALL FIRST

## BUY NOW IF YOU HAVE NOT ALREADY

Editor HARDWARE WORLD:

Our opinion is that the retailer and jobber should have their fall stock ordered long before now if they are going to get any material on their orders, especially those products made largely of steel.

No one knows what the outcome of the steel and coal situation will be, but at its best, we feel that about one-half of the rders will be delivered. The trend of the market in the north and south is to go slow. In the west we find it to be increasing and we believe the west will be the wise buyer this season.

If we were to talk to the individual buyer, we could not impress upon him too strongly the importance of having his specifications placed. Some months ago we heard the same story about prices coming down. Instead, hot rolled steel went up 100 per cent and cold rolled went up 50 per cent base. The situation is identical now to what it was some time ago.

Our advice would be to buy now if the dealer has not already done so. Most of our factories are still oversold for many months.

Yours very truly.

FAULTLESS CASTER COMPANY,

Evansville, Ind. C. B. Noelting.

## BUY NOW IF YOU EXPECT GOODS

Editor HARDWARE WORLD:

As far as we can see, there will be no drop in prices, and we would advise dealers to buy now if they expect to get delivery. The coal situation and the railroad situation will make it harder than ever this fall and winter to secure merchandise.

Yours truly,

THE BRAINERD MFG. CO.,

East Rochester, N. Y. H. L. Brainerd.

## EXPECT A SCRAMBLE FOR BUSINESS BEFORE LONG

Editor HARDWARE WORLD:

Keep all purchases down to hand-and-mouth basis. Foreign trade slowing up fearfully fast. Money very tight. Credit is being restricted upon orders of the Federal reserve board all over the country.

Our manufacturing facilities have been increased a hundred fold during the last four years. The railroad tangle in traffic is fearfully bad and growing worse. Strikes, etc., are all working to make conditions slow and my experience during the last 27 years has been:

Take such conditions as above with our tremendous increase of manufacturing facilities and you have a contribution that is going to cause a scramble for business in a few months.

I have found this month, quite a new interest being shown by the different manufacturers about new stock orders. Have had more salesmen in hunting orders this month than three months previously. Prices are too d—— high. No excuse except the game of d—— the other fellow, we must get rich now.

Our salesmen report mill after mill being shut down —"Cannot get material to work with." What good are orders if you cannot fill them? If you are employing 10,000 men and no coal, no material to work, with no prospects of any.

I believe we have got to have a period of adjustment to bring prices, taxes, etc., down to a more reasonable basis before this great, glorious country can run normally again.

HYFIELD MFG. CO.,

New York. O. E. Strong, Pres.

## EXPECT REDUCTION WITHIN SIX MONTHS

Editor HARDWARE WORLD:

It is difficult to analyze the business for the coming year or six months. As we see it, the indications are that prices have reached their peak and will from this time on gradually decrease. For instance, there is an over-stock f wool and the cost of woolen goods should be reduced within the next six months.

We deal with grey iron foundries considerably, and we note that at this time we are able to get castings very promptly, whereas heretofore we have had to wait two or three months. We also note in the steel product business that there seems to be a surplus of stock on the market of certain sizes and grades of goods.

This also would indicate that the steel companies are catching up with their orders and are now having a surplus to supply the regular trade, so that looking at the matter in this light, we feel as though there will be a reduction in prices of all goods within the next six months rather than an advance.

Yours truly,

Dayton, O. AMERICAN BOLT & SCREW CASE CO.

## MANUFACTURERS WILL GUARANTEE AGAINST DECLINE

Editor HARDWARE WORLD:

We would say, from the information we have been able to secure, that the best policy for both the wholesaler and retail trade would be for them to place their orders for the 1921 season at the earliest possible time.

We cannot guarantee our prices for any definite period, and know only what goods cost us at this time. We cannot get any definite information as to future prices, but we should say that if there is any change, it will be an advance rather than a decline.

We are accepting orders now to be shipped at any time this fall or winter, at the prices prevailing, but we believe that the best policy for the trade is to place their orders just as soon as they possibly can for their requirements for 1921. Nearly all manufacturers will guarantee prices against decline, so that when orders are placed now, it insures the present prices or lower, and protects against a later advance.

Yours very truly,

THE JOHN J. HILDEBRANDT CO.,

Logansport, Ind. H. H. Hildebrandt, Vice-Pres.

## NO INDICATION OF LOWER PRICES YET

Editor HARDWARE WORLD:

There seems to be a widespread opinion that there is going to be a break in the market of prices of different raw and finished materials this fall, but we do not believe these opinions have a substantial foundation as we are still contracting six to nine months ahead for our raw materials and supplies. In some cases the prices have advanced rather than declined.

We cannot see anything to justify a drop in the market prices before next spring, if then. Any of the trade that are holding back their orders with the hope of obtaining lower prices will, undoubtedly, be disappointed.

In our opinion, we do not believe prices will be affected until the country begins producing a larger supply than the demand, and from present indications it does not seem as though we were very close to this condition.

Yours truly,

SUPERIOR LABORATORIES,

Grand Rapids, Mich. T. H. Tapley, Gen. Mgr.

# "WHAT POLICY SHOULD MERCHANTS PURSUE?"

## HARD TO STATE FACTS WITHOUT TALKING POLITICS

Editor HARDWARE WORLD:

The last several months have been the most onerous for producers of goods ever experienced. The whole world is calling upon us for manufactures and yet we have not been able to more than half take care of domestic requirements and this through operation of every known device to speed production.

The whole fault rests with labor, thus all this year a continuous embargo against freight shipments from a West Virginia point to New England: express service thus obligatory and at express prices.

At point of origin, production is one-half requirement; at destination less than that. What producer knows what his goods are costing him under these circumstances? And without actual relief in sight, lower prices are out of the question; higher are probable, but one can't state these facts without talking politics, as they are a part of the facts.

Ever since passing of the Overman bill, labor has grown increasingly unproductive, inefficient, and menacing, thus present conditions are very largely due to politics, that is the Democratic party, the party of labor.

Conditions will not right themselves before a change in administration is assured not then unless the new adminisration places our country ahead of everything else.

Current conditions are impossible and cannot continue so. Labor cannot continue to be the boss. Whatever is necessary to make a change will be done and people are now preparing for the worst, that is, a reelection of the labor party; in that event, I predict very serious times. Merchants are intelligent: they can draw their own conclusions.

Yours truly,

UNITED ROYALTIES CORPORATION,

New York. L. Bordwell, President.

## RAZORS AN EVERYDAY NECESSITY, INCREASING IN DEMAND

Editor HARDWARE WORLD:

Deliveries of steel have improved, the labor situation likewise, orders on hand cannot be filled in six months if we refused all new business and received 25 per cent cancellation of the total amount of orders on hand, the consumers' demand for Gem Blades actually increased 39 per cent during the first six months of 1920 and according to sales of Gem Razors a similar increase in demand for Gem Blades will take place during the last six months of this year.

None of our raw materials have declined in price, neither the wages of our labor, instead, some increases have taken place and with the advance in freight rates it is clearly seen that no factor in our business warrants nor permits a reduction in price.

The nature of our merchandise and the conditions surrounding its production must readily conclude that in order to take advantage of the opportunities it is necessary to order far in advance. Our holiday line has been under preparation for five months, we are ready to present it and recommend that the orders be placed for immediate deliveries wihout any specified future date, thus avoiding congestion and assuring the greatest extent timely deliveries, as we will not accept orders for greater amounts than we can deliver by the 10th of December, 1920.

Yours very truly,

THE GEM SAFETY RAZOR CORPORATION,

Chicago, Ill. P. F. Biser, Western Manager.

## GOVERNMENT'S ARBITRARY POLICY SETS A BAD EXAMPLE

Editor HARDWARE WORLD:

We are taking in all the material that we can possibly buy, as our first desire is to operate our plants under normal conditions.

We have thought every year for the past three years that the time had come to make a change downward, but at the end of every season conditions caused us to take an opposite view.

In order to gauge the business situation for the future, one must first take into consideration the labor factor, and at the present time there are some industries that have laid off many employees. We refer particularly to the automobile industry and its allied lines, as well as the silk and woolen industry.

The writer cannot see that there will be any material decline in labor at this time or for the coming season. Railway wages have recently been raised and freight rates advanced. Rents are not declining, and the advance in interest rates does not seem to affect the public. Our Government's arbitrary policy keeps us in reality still at war, and the Government, therefore, has not reduced its expenditures to a non-war basis.

It seems to us that if a merchant desires to do business profitably, he will have to have stocks on hand. It may be very well to advise merchants to reduce stocks, but this is very poor advice to the merchant who has carefully handled his affairs the past few years We all know that if we have not material out of which to make goods, we cannot make deliveries. Neither can the jobbers or dealers sell goods without having purchased them before hand, as otherwise they may not get the goods in time for the season for which they were purchased.

We have advanced labor three times during the year, and weaving wire has recently advanced more than at any other one time since the beginning of the war.

If strikes could be eliminated and labor would produce as they did before the war, then would be the time to buy 75 per cent of one's requirements rather than 100 per cent.

Yours very truly,

AMERICAN WIRE FABRICS COMPANY,

Chicago, Ill. C. K. Anderson, President.

## NO POSSIBILITY OF LOWER PRICES

Editor HARDWARE WORLD:

Insofar as our products are concerned, we do not believe there is any possibility of lower prices for some time. We cannot definitely point out a single item in connection with our manufacturing costs which we will be able to purchase for the next six months at lower prices.

We are far more inclined to believe that there may by a slight increase before the end of the year, especially if the price of tool steel should be increased by the manufacturers. Yours very truly,

MAYHEW STEEL PRODUCTS, Inc.,

New York, N. Y. J. B. Parson, Vice Pres.

## AMMUNITION MANUFACTURER DOES NOT EXPECT LOWER PRICES

Editor HARDWARE WORLD:

Conditions are so unsettled at this time that we would not care to make any statement, but do not see any possibility of prices going any lower.

Digitized by Google

# IS IT MORE A QUESTION OF MERCHANDISE THAN PRICE?

## NO REDUCTION IN PRICE FOR SOME TIME

Editor HARDWARE WORLD:

We do not feel that the jobber or dealer is taking any chances whatever in placing orders at present prices on our line for shipment during the coming fall or spring months, as we are quite confident that it will be impossible for us to make any reductions in our prices for some time to come. In fact, it is quite probable that there will be advances before any decreases are made, especially if labor conditions continue as they are today.

Of course at this time we are not in a position to state definitely that there will be any changes in our prices within the next six months, as that will depend entirely on labor conditions.

We are quite confident that the present high level will continue for some years to come and are very doubtful as to their being any general lowering of prices in the near future, if ever.

Yours very truly,

E. C. ATKINS & COMPANY,

Indianapolis. G. W. Dunnington, Asst. V. P.

## LOWER PRICES FOR TOOLS NOT LIKELY

Editor HARDWARE WORLD:

We believe that a slight retarding of customers' orders is at present apparent to many manufacturers in the metal working trades. Notwithstanding this, however, there seems to be little doubt but that more orders are standing on the books of the manufacturers of small tools at least than there have been for considerable time preceding.

There being little probability of diminution of the wage scale and inasmuch as labor contributes so heavily to the cost of tools, these factors, together with the cost of materials, we believe do not indicate probable falling of prices in the near future.

We seriously doubt whether the trade by deferring purchases and the placing of orders for the coming season in hopes of obtaining lower prices, will ensure the desired benefits to the distributor whose ultimate sole commodity is service.

Yours truly,

MILLERS FALLS COMPANY,

Millers Falls, Mass. K. Brewster, Pres.

## CONDITION NOT SAME IN IRON AND STEEL PRODUCTS AS IN TEXTILES, FOOD AND LEATHER

Editor HARDWARE WORLD:

In our opinion as long as there is less supply than there is demand for commodities there will not be much decline in the price of labor to produce them or in the price of the material that enters into such commodities. Prices of labor and the excessive taxes upon manufacturers, state, income and excise, will keep up the manufacturing costs, so that manufactured goods that are in greater demand than the supply will not decline much in price to the distributor.

There will be, and not far hence no doubt, a demand by the consumer for lower prices, and prices to the consumer will begin to crumble and especially where there has been much profiteering will there be some tumbling of prices, but this condition does not at this time apply so much to steel and iron products as to textiles, leather and food products.

Very truly yours,

TRIMONT MFG. COMPANY,

Roxbury, Mass. Charles C. Ely, Treasurer.

## QUESTION OF DELIVERY PARAMOUNT

Editor HARDWARE WORLD:

In our opinion the question of delivery of mechanical tools during the coming fall and winter will be paramount to the question of price. We doubt if the productive capacity of the various plants making this product is anywhere near equal to the demands of the trade in this country and abroad. We are hopelessly behind ourselves and have been for many months; we are just at the moment sending a special notice bearing on the question of deliveries to all our customers—a copy of this notice we are enclosing herewith.

We can see no prospect of lower prices in the tool line. Just so long as we are obliged to continually increase our wage schedules, just so long will it be necessary for us from time to time to revise our prices. These prices have been, are, and will be, based on the computation of the actual cost of the tool involved.

**Actual and Replacement Costs**

It may be interesting to your readers to note carefully the difference between actual cost and replacement cost. Actual cost means a computation showing the dollars and cents expended for producing the article or articles involved; replacement cost means what it would cost to replace the articles involved at the time of computation. A price based on actual cost plus a reasonable profit represents actual value and is the fairest policy that can be pursued, although it does not admit of making firm prices.

We can only reiterate what we have said many times before, that until the markets of the world are supplied with a stock of mechanical tools the demands will be enormous.

Yours very truly,

GOODELL-PRATT COMPANY,

Greenfield, Mass. W. M. Pratt, President.

## PRICES KEPT UP BY LIMITING PRODUCTION

Editor HARDWARE WORLD:

In the writer's opinion we have not yet reached the top market for metalware. It is true that prices on some commodities have taken a drop but it is only temporary and it will only be a short time before the tide moves backward again and prices will go higher than ever.

In regard to food stuffs, we believe this is a very critical time and if there is not something done in a short time to increase production we believe a very serious situation will confront us. Europe is not yet producing sufficient to supply their population and America is not doing much better.

The laborers are contented with present conditions and if the manufacturers and jobbers think that the laboring class of people are not aware of present conditions they are fooling themselves for just as soon as the laboring people find that production is speeding up they take steps to avoid it and in this way will keep prices of goods up.

We are opposed to buying for speculation but believe that the jobber who buys for two or three months in advance of his immediate needs will not only best serve his customers but will profit most in the long run. We are fully convinced that there are no large reserve stocks of steel or heavy hardware in the country.

Trusting the above outline of conditions as we see them will be of some value to you, we are

Very truly yours,

ROCHESTER CAN COMPANY,

Rochester, N. Y. James A. Byers, Sales Manager.

Digitized by Google

## WISDOM TO PLACE ORDERS EARLY IF YOU EXPECT GOODS FOR HOLIDAY SEASON

Editor HARDWARE WORLD:

A manufacturer should hesitate in giving out anything for publication that might be wrongly construed.

For example, to state our views with reference to the policy that should govern the trade, both wholesale and retail, in making their purchases and placing their orders for the coming season, if we should express ourselves very optimistically and recommend to the retailers and jobbers that they place their orders and specifications early for such goods as they anticipate needing for their fall and holiday requirements, it might be construed as purely selfish on our part.

Our own feeling is that there is little indication now that the price of merchandise can drop before January 1st. As a matter of fact, there would be every justification for an advance, as the prices of labor and most raw materials have been tending upward. In no case have we heard of a fall in the price of labor, and, while the prices of a few items that enter into manufacture have fallen a little, a great multitude of changes have been in the way of an advance.

We feel that, notwithstanding many disturbing conditions and that we will have a National Campaign this fall, business will be good. With transportation facilities as poor as they are, we believe the trade generally will see the wisdom of placing their orders early for such goods as they will require for the holiday season.

Yours very truly,

BISSELL CARPET SWEEPER CO.,

Grand Rapids, Mich. R. E. Shanahan, Sec.

## ALMOST AFRAID TO HAZARD AN OPINION AS CONDITIONS CHANGE OFTEN

Editor HARDWARE WORLD:

Prices on raw material of every description that enters into our finished product are extremely feverish.

No one knows what September will bring about in the labor market, and we pick up this morning's papers and find that a stupendous amount of money in wage increase has been granted to railroad operatives and a necessary increase in freight rates have been awarded the carriers, all of which will have a disturbing effect on every commodity. What the result of it will be we really do not see who can forecast in the slightest degree.

Very truly yours,

NEW YORK STAMPING CO.,

Brooklyn, N. Y. T. B. Easley.

## PRICES WILL HOLD GOOD FOR AT LEAST SIX MONTHS

Editor HARDWARE WORLD:

It is our candid opinion that prices in effect today will hold good for at least six months to come. At least, that is the policy on which we are working.

The majority of our customers, especially the carload buyers, are placing orders at the present time for fall delivery and do not seem to be of the opinion that they will obtain lower prices by holding off.

Yours very truly,

BUFFALO FORGE CO.,

Buffalo. E. G. Leonard.

## DO NOT EXPECT REDUCTION IN PRICES

Editor HARDWARE WORLD:

We do not anticipate any reduction in prices of our product, because prices today are not as high as they should be on account of the increase in wages and other materials entering into the manufacture of our product.

Yours truly,

THE WM. H. OTTEMILLER CO.,

York, Pa. M. A. Mitzel, Sec.

## DON'T SPECULATE, BUT KEEP UP REQUIREMENTS

Editor HARDWARE WORLD:

We have never been in favor of the dealers stocking up in a speculative way and have for the past year advocated their buying simply for their requirements.

As we see the situation, there is absolutely no chance for a reduction in price for some time to come. Should we be able to buy material tomorrow at a much lower price, it would be six or eight months before goods made from this material would get into the dealers' hands. There is no immediate prospect of wages being any lower, and while there will undoubtedly be a gradual improvement in the individual efficiency of the men, it will probably be some time before this is great enough to make any difference in the cost of the goods.

During the next two or three months we do not look for any big business, but we do look for an enormous business before a very great while. Dealers' stocks as far as we can find are low, owing to the impression that seems to prevail among hardware buyers that there is bound to be a reduction in prices: consequently when business starts to pick up again and it is realized that prices will not be any lower, the manufacturer is going to be swamped with orders which he cannot fill.

So far the average manufacturer has been unable to build up any reserve stock of finished product, and consequently, in our estimation, the buyers that wait before placing their orders will find that they are unable to get the goods when they want them and may have to wait six months to have their orders filled. We do not mean by this to advocate heavy buying, but we do earnestly suggest that the buyers see that their stocks are kept in shape to handle any immediate business and tide them over during the time the goods are coming through the factory.

We have been able during the past year to maintain fairly prompt deliveries and are using every effort to maintain that record; however, we will be unable to do this unless the dealers keep their stocks in good condition.

Yours very truly,

LAWSON MFG. COMPANY,

Chicago. Kenneth Lockett, Vice Pres.

## NO HOPES OF LOWER PRICES

Editor HARDWARE WORLD:

We cannot see any hopes of lower prices inasmuch as our cost has been steadily arising since our last change in discounts and a further advance is altogether probable before the cold weather.

We are still behind on orders and until the supply of all products of steel and iron is more than the demand, a decrease is not to be expected.

It is still difficult to purchase raw material of all kinds and with the increasing prices of raw material—and in some directions labor—manufacturing costs demand revision of selling prices.

We will advise our customers not to delay purchases but to take care of their normal trade and stock at present prices.

Yours very truly,

STAR EXPANSION BOLT CO.,

New York. W. A. Peters, Sales Mgr.

## PAINT MANUFACTURER HESITATES TO PREDICT

Editor HARDWARE WORLD:

We do not expect any lower prices in our general line up to January 1, 1921, with the exception of linseed oil, which shows some weakness at the present moment. Beyond January 1, we hardly care to predict but up to that time we see no reason why the trade should not make their usual purchase in confidence.

We do not care to have our name mentioned, however, as predictions are not always safe to make.

Digitized by Google

# JOBBERS WILLING TO HAVE YOU DO BUSINESS ON THEIR CAPITAL

## APPROVES POLICY OF HARDWARE WORLD

Editor HARDWARE WORLD:

We think your suggestion is entirely in line with present conditions when you say that it is important for the retail merchant to buy frequently and in small quantities to insure the largest turnover on the smallest investment. This seems to us to be a time when a policy of this kind is particularly desirable.

We feel, however, that it is also desirable that with the heavy demand which now prevails for almost all kinds of hardware a merchant should keep up his assortment in just as good shape as possible, and not be out of goods because he thinks the price is high and will be cheaper. In our judgment, either a retailer or jobber will lose less money on declines in value of the stock he may have on hand than he will by being out of goods when they are called for by his customers.

In a general way, the market for hardware is high, but prices evidently have not reached the point where the consumer has stopped buying.

Yours very truly,

HIBBARD, SPENCER, BARTLETT & CO.,

Chicago. J. J. Charles, President.

## BUY OFTEN—WATCH COLLECTIONS CLOSELY

Editor HARDWARE WORLD:

It is our opinion that the average dealer, especially the smaller dealer in country towns, should buy frequently and in small quantities. This will give him a quicker turnover of his merchandise with less capital invested to prevent the possibility of being caught with large stocks on a declining market.

It is always wise to watch collections closely, especially so at the present time, for it is evident or should be evident to every good business man, that the day is coming when there will be failures and those who keep their accounts collected closely will be the last to suffer, if they suffer at all.

Yours very truly,

THE EDWARDS & CHAMBERLIN HDWE. CO.,

Kalamazoo, Mich. J. Chas. Ross, Secy.

## LAST PARAGRAPH NEEDS EMPHASIZING

Editor HARDWARE WORLD:

When money is plentiful and the interest rate low, it is frequently a profitable business policy to carry large stocks, and extend liberal lines of credit. Some retailers seem inclined to continue with these methods in the face of the fact that conditions are completely changed.

Clearly, the only sound policy for retailers to follow at this time is to examine their stocks minutely and at frequent intervals for the purpose of discovering and pushing slow moving lines. This frequent analysis should also be used for the purpose of helping the merchant to keep his stock at a minimum figure and at the same time maintain reasonably good assortment.

The situation seems to suggest three rudimentary, but highly important warnings: Avoid overstock and speculative buying; maintain the highest possible turnover of stock; watch collections carefully, and bring sales to basis as near cash as possible.

Yours very truly,

MOMSEN-DUNNEGAN-RYAN CO.,

El Paso. A. A. Martin, Credit Mgr.

---

To be able to concentrate and devote all their time to their hardware and furniture business, the Ritchey Hardware Company at Yuma, Arizona, has closed out their implement stock.

## TO GET MERCHANDISE ONE MUST ORDER EARLY

Editor HARDWARE WORLD:

As to retail merchants buying frequently and small quantities to insure the largest turnover on the smallest investment. It is our opinion that this is good policy for staple items, not seasonable items, when times are normal and when orders can be filled promptly.

It is not good policy, however, at the present time under the very abnormal conditions which exist in the hardware distributing business. It is particularly not good policy with reference to seasonable lines.

Throug' out the last several years the supply on many items has been so short that many items could not be bought at all in season and delivery made. The jobber was fortunate if he succeeded in securing enough material to take care of the orders that he had sold on futures, and this, of course, was his first obligation.

I believe that until conditions very materially change, the retailer's best interest is going to be to anticipate his wants long in advance and especially is this true of all seasonable items. He should figure conservatively his needs on seasonable lines and place an order early for future delivery on these seasonable goods. If he does not do so he probably will not have any merchandise of that particular line on which to do business.

In regard to collections, the merchants will never in their lives have a better opportunity of collecting up all past due accounts than will exist this present year. We do not look for any early d cline of any steel products, but rather for a continued shortage with increased pro-rating of factory output.

Very sincerely yours,

TOWNLEY METAL & HARDWARE CO.,

Kansas City. John M. Townley.

## KEEP STOCK WITHIN REASONABLE LIMITS

Editor HARDWARE WORLD:

We believe that there never has existed a time when the retailer could serve his own best interest by a careful scrutiny of his buying by keeping his stock within reasonable limits and endeavoring to turn his stock as many times as possible during the year.

The fact that merchandise at present levels requires at least twice the capital to carry than it required four years ago is alone a sufficient reason for the retailer keeping his stock to a minimum.

There is, of course, at the present time, a tendency to overbuy when some article which has been scarce is offered, but the value of this stock is soon decreased by excessive carrying charges. We believe that the average retailer at this time is pursuing a very conservative policy and it is our opinion that as a rule the retailer's stocks in our territory are not over-loaded.

We believe that a great deal of attention has been given to cleaning up odds and ends and slow moving goods and we also feel that the present restriction of credit has had a very good effect in causing the dealers to look into their collections, and we feel that when restrictions are removed that general business in this locality will be upon a safer and sounder basis than before. We believe that the present heavy volume of business reflects an active demand on the part of the ultimate consumer and does not represent to a very large extent any effort to build up the retailer's stocks to a dangerous degree.

Very truly yours,

EMPKIE-SHUGART-HILL CO.,

Council Bluffs, Iowa. Fred D. Empkie.

# "WHAT POLICY SHOULD MERCHANTS PURSUE?"

## SPLENDID ADVICE FROM TEXAS JOBBER

Editor HARDWARE WORLD:

It has been our policy for many years to urge upon our customers the importance of quick turnovers, the best way to bring about which is to buy frequently close to home. It is gratifying to be able to say that this policy has been appreciated by our trade and has made us many warm personal friends.

The retail merchants, in larger numbers, are realizing that no matter how cheaply an article is bought no profit accrues until goods are sold and the money collected. Therefore, if they buy twice as many as are really needed, their profit is either tied up in surplus stock or sacrificed in order to induce sales, and in either event more or less good hard work has been done for nothing.

Please understand that I do not advocate underbuying, for this is just as bad, or worse, than overbuying, but where a retailer has a dependable source of supply close at hand, he is very foolish not to take full advantage of his opportunity to double his annual turnover.

This is particularly desirable at the present time when both goods and money are high.

Naturally the question uppermost in our minds is "What is the market going to do?" all agreeing that some day prices must start downward. Whether the time is soon or late, the change carries no scare for the merchant whose stock is well assorted, but stripped of surplus.

The only way to be absolutely sure your stock will be in this condition, is to buy small quantities frequently and close to home.

Yours sincerely,
NASH HARDWARE COMPANY,
Ft. Worth. Arthur D. Hodgson, Pres.

## OVERBUYING CONTRIBUTES TO FAILURE

Editor HARDWARE WORLD:

We are very glad to have an opportunity of expressing our views of this subject, for we don't believe that there is any one factor that contributes as largely to failure of retail merchants as overbuying. No doubt a close credit man would take issue with us and say that poor judgment on the part of credit is responsible for the greatest amount of failures, but from our observation, we believe that overbuying is the main factor in most failures.

The question of buying in small quantities and buying frequently has always been an important one in the retail business and during a time of restriction of credit it has been greatly magnified and made of more importance still.

Yours very truly,
McRAE WHOLESALE HARDWARE CO.,
Helena, Ark. H. E. McRae, Pres.

## PUSH SALES AND COLLECTIONS

Editor HARDWARE WORLD:

You are asking more than we can deliver. Pushing sales of slow moving items and collecting accounts closely are always fundamental and every successful merchant does it all of the time.

Tell them rather to husband their resources, to restrict expenditures for expansion and to cut off extravagance.

Probably troublous times are ahead and the wise man meets them while on his feet. Lack of transportation and tight money partially caused by it are stopping the wheels. Very truly yours.

Detroit. ROEHM & DAVISON.

## SOUND ADVICE THIS

Editor HARDWARE WORLD:

The intermountain country from a crop standpoint is in better shape than any time in its history. The yield of hay, grain, sugar beets, etc., is very promising and it is our belief that business for the balance of this year is going to be good in our section of the country, because of the splendid crop situation.

**Prices Will Remain Firm**

It is our opinion, also that hardware prices are going to remain firm during the balance of 1920 and that it is to the best interest of retail dealers to keep their stocks up to a point where they can supply the wants of their trade. This, under present conditions, should be handled through frequent buying in smaller quantities than heretofore. Goods, however, should be coming in to the retailer every day in order to keep his stock balanced up and put him in a position to do business.

Every merchant should go over his stock very carefully and find out whether he has any items on which he is overstocked or if there are any items which he wishes to close out. On all such goods he should make a decided effort to sell so that on January 1st, next, his inventory will show no slow moving items or overstock in any department.

The question of credits must be one of serious consideration. Each merchant should study his location carefully and it would be to his interest to make frequent trips into the outlying districts to find out for himself just what the actual conditions of the farming community are and whether, in his judgment, they will be able to pay for the goods they buy.

When a farmer sells his crop, the storekeeper should insist upon payment in full of any obligations which he may have contracted at the store. The banks will not be in a position for some time to assist merchants because they will have all they can do to finance the crop, and the merchant, therefore, must look to the farming community in his section to pay him in order that he may pay his obligations to the jobber.

Yours very truly,
STREVELL-PATERSON HARDWARE CO.,
Salt Lake City, Utah. By P. C. Gill, Secretary.

## BUMPER CROPS ASSURE A GOOD DEMAND

Editor HARDWARE WORLD:

There will unquestionably be a good demand for hardware in the middle west during the coming fall and winter seasons. The promised bumper crops practically assure this.

We are not of the opinion that prices in hardware will be any lower before 1921, but at the same time we are not advising any dealers to make heavy purchases of merchandise. The prevailing high rates of interest, the restriction of credit and the transportation difficulties which interfere with the movement of crops away from the farm all indicate that the dealer's wisest course is to buy frequently and in small quantities from nearby jobbers.

We should also advise special attention to the collection of slow accounts, as a great deal of money can be put in the channels of trade which would otherwise be slow in entering it. In our opinion there has been no time in the past four or five years where jobbers' stocks should be more freely and consistently used by retail dealers than during the coming six months.

Yours truly,
HARPER & McINTIRE CO.,
Ottumwa. C. S. Harper.

# YOU CANNOT DO BUSINESS WITHOUT STOCK ON HAND

## USE JUDGMENT AND CARE IN BUYING

Editor HARDWARE WORLD:

Recently, when big headlines about price reductions appeared in the papers, many of the hardware merchants became alarmed, because they quite naturally believed that all prices would drop suddenly.

However, those who analyzed the situation soon saw that the lines on which prices were reduced were those which had shown the biggest advance, principally wearing apparel.

After a cereful analysis, we were satisfied that there could be no serious declines in the prices of hardware and steel products in general, for the reason that the advance on these lines has not been anywhere near as great as on other commodities (the rise in prices on hardware and steel products has been only about the same as the inflation in currency and credit), and for the further fact that there is still a serious shortage.

The further crippling of our transportation system has curtailed deliveries of raw material to the mills and factories still more and has prevented the manufacturer from shipping his finished products, so that the shortage in many lines is more serious than it was a few months ago.

We do not see how there can be any substantial reduction in prices until the supply is increased sufficiently to meet the demand, or until there is a serious curtailment in buying on the part of the public, which, up to this time, is not in sight, because wages are still high and unemployment has not yet reached a point where it will cause a noticeable reduction in the purchasing power of the general public.

The wheat and oats crop in our trade territory has been up to the average, which has given the farmers some ready money to take care of their summer and early fall requirements. Corn through this section is in excellent condition, and with favorable weather from now on it seems certain that there will be at least an average crop. From some few sections reports come that the corn is not in good condition, but from all we can learn this condition is not extensive.

In our buying we are pursuing the policy of placing orders for everything that we expect to be able to sell this year, and we are also placing orders for seasonable items for future delivery a little earlier than usual. We are advising our customers to pursue the same policy.

We feel certain that the hardware merchant who keeps his stock well assorted and places his orders for future delivery in sufficient time to insure his getting the goods will make more money—even if there should be some declines in prices soon—than the merchant who allows his stock to run down and in that way loses sales and profits by not being able to supply the wants of his customers.

While there are many uncertainties before us in the financial and commercial world, we have every reason to expect good business during the balance of this year.

Yours very truly,

TENK HARDWARE COMPANY,

Quincy, Ill. R. Tenk ,Pres.

---

## STAPLE PRICES FOR STAPLE COMMODITY

Editor HARDWARE WORLD:

In view of the fact that the price of our product has remained during the period of the war and thereafter and still remains the same, there is no reason why dealers should place orders now for far in advance delivery.

Yours very truly,

AUTOSTROP SAFETY RAZOR CO.,

New York. N. R. M., Adv. Dept.

## NOW IS TIME TO CLEAN HOUSE

Editor HARDWARE WORLD:

The peak of high prices apparently is passing which impels us to say that it wuold be an opportune time for all retail merchants to consider holding their stock requirements to a minimum. This, of course, would mean that they should buy frequently and in small quantities. A quick turn over is very desirable and in fact a necessity if an adequate margin of profit is to be shown in any business when there is no speculative market.

Many lines of hardware commodities are now being produced in large quantities, and a little clearing in the labor situation would bring other lines up to normal. There is also developing some import business, which is bound to have its effect in time.

The greatest difficulty which is facing the country is that of transportation, but no doubt a gradual improvement in these lines will be noted. In the meantime the downward trend in prices will be delayed. It will be necessary, of course, to cover all items that are seasonable and for which orders must be placed in advance to insure delivery, but keep in mind that now is the time to "clean house" and to turn into cash all slow moving items, and particularly goods that you know to be abnormally high, and which will be first to feel the slump.

Good prices for all natural commodities should keep business in this territory up to normal this fall, making the opportunity for merchants to get the turnover and profit. However, collections should be looked after closely, and an effort be made to get their business in the best possible shape at the end of the year.

Yours very truly,

THE THOMSON-DIGGS COMPANY.

Sacramento. C. F. Prentiss, Vice Pres. and Gen. Mgr.

---

## A CONSERVATIVE POLICY IN ALUMINUM GOODS

Editor HARDWARE WORLD:

Our company has adopted the policy of being slow to advance prices, and when we are obliged to do this, we give our customers the benefit of any decline that would take effect against our own price list, on any goods not shipped at the time of such decline. We feel that this protects our customers in not taking any chance on future orders, and also gives the manufacturer an opportunity of knowing the orders he has on file.

A policy of this kind would be more satisfactory to both parties.

Yours very truly,

WEST BEND ALUMINUM CO.,

West Bend, Wis. A. G. Langenbach, Sales Mgr.

---

## PLACE CONSERVATIVE ORDERS

Editor HARDWARE WORLD:

It is our impression that retail merchants should watch their purchases very closely under existing conditions, but on the other hand we believe the shortage of goods is going to carry over into next year, so we are urging our customers to place conservative orders for the seasonable goods that they will require during the spring months.

We think it advisable for retailers in all lines to keep their accounts well in hand, and buy conservatively, keeping their stocks to as low a point as possible.

Yours very truly,

MORLEY-MURPHY HDWE. CO.,

Green Bay, Wis. A. E. Winter, Sec.

# IRON AND STEEL DID NOT ADVANCE LIKE OTHER PRODUCTS

## CURTAILMENT OF CREDIT BY FEDERAL RESERVE BANKS AFFECTS EVERY MERCHANT

Editor HARDWARE WORLD:

The conditions covering heavy commodities are rapidly becoming worse. It is almost impossible to secure deliveries—possibly not so much on account of shortage of steel, but other smaller items which enter into the manufacture of heavy commodities.

The freight situation, while it has been extremely bad, is continually growing worse. The result is that jobbers' stocks are becoming more and more depleted, and it is necessary to use methods not previously used in order to keep a sufficient amount of merchandise on hand to supply the demand.

The retailer should:

1st. Reduce his stock of items which are not strictly staple.

2nd. Refrain from buying merchandise which is not staple.

3rd. Should collect accounts which have been slow in the past three years immediately—or should get security covering same, regardless of what the customer's views may be upon the subject.

4th. Should immediately purchase through some jobber who can be depended upon sufficient merchandise to cover his spring needs for 1921 in order to insure his being in business in 1921.

5th. The wise retailer will confine his operations just at this period to strictly staple merchandise and accept a somewhat smaller volume of business willingly and gladly.

6th. Will spend the time he ordinarily spends in attempting to buy cheap goods, in making collections now, which in a few months it will be impossible to make at all.

If some miracle man could inject into the hardware trade as a whole a realization that we are passing swiftly but surely through a reconstruction period and that the pathway leads in some measure through unexplored regions—he would confer a great blessing upon the trade.

The general disposition of the retail hardware merchant is to look with apathy upon the present situation and regard the curtailment of credit and entire elimination of undesirable credit from the Federal Reserve Banks—as something which does not affect him.

On the other hand every retail merchant should realize that this very thing is the most vital thing which has occurred and does affect every jobber, every retail merchant and every consumer in the United States.

The contraction of credit generally, whether it be from the standpoint of the jobber, retailer or the consumer—we believe will be a blessing in disguise, and the wisdom of following a policy of this character will easily be appreciated during the latter months of 1921.

Very truly yours,

WHITON HARDWARE COMPANY,

Seattle, Wash. John F. Welborn, President.

## NO GOOD REASON TO DELAY

Editor HARDWARE WORLD:

As material and labor are advancing in price, which must increase the cost of production, there could be no possible reason for delay in stocking at the present time, as a live stock will work itself off before a reduction in prices can possibly come.

Very truly yours,

THE STINE SCREW HOLES CO.,

Waterbury, Conn. I. D. Stine, Mgr.

## DO NOT EXPECT RADICAL PRICE REDUCTIONS

Editor HARDWARE WORLD:

The retailer owes a certain obligation to his customers, viz., that he should carry a reasonable stock of goods to take care of their immediate wants. He also owes an obligation to himself, viz., that he should not be over-stocked, he is not expected to unduly estimate the wants of his customers, neither is he expected to incur unnecessary financial obligations to carry out the function of his existence.

A merchant cannot transact business or sell goods without having a stock, and we have always considered that a properly managed institution made more on a market advance than they lost on a decline, but, to achieve this desirable end, it is necessary that the institution be well managed and careful judgment be exercised in the purchase as well as sale of goods.

The jobber's function is the same as the retailer's, but, of course, on a broader scale, and we strongly urge upon the retailer, under present abnormal existing conditions, to use his jobber freely, purchasing lightly but frequently; yet, we hardly advise making an iron-clad rule of this character, rather letting the elements of his local wants, known market, and other contingencies guide him in his decisions.

When it comes to certain seasonable goods, the prices of which are generally fixed once or twice a year, and the demand for them is to be short, we believe no particular risk is taken by purchasing a reasonable quantity for future delivery. However, we strongly maintain that this is not the time for speculative buying, as all prices are abnormally high and undoubtedly great inflation exists, but, as long as the demand exceeds the supply we can look for little if any price recessions.

We must also bear in mind that the steel, coal and railroad strikes have seriously handicapped the production of our two basic commodities, viz., iron and copper, and we must also bear in mind that, on account of the high living costs, the prices of labor will recede little, if any, for some time to come.

Therefore, we do not look for any sudden or radical price reductions for many months, but we are conducting our own purchases in a cautious manner and are recommending this plan to our customers.

Yours truly,

CALIFORNIA HARDWARE COMPANY.

Los Angeles. Shannon Crandall, President.

## ARKANSAS JOBBER'S SUGGESTION

Editor HARDWARE WORLD:

We think with the unsettled conditions that it is absolutely imperative for the retail merchants to buy as frequently and in as small quantities as possible.

The past few years of speculative market have encouraged the merchants in overloading and many of them have profited by it. On the other hand, there is no doubt but that many of them will suffer in the readjustment that is bound to come.

It takes little business ability to make money with conditions like they have been for the past few years, for the reason that no matter what you paid for an article, or how much you bought, you were sure to sell it and at a profit. When the readjustment starts, it will work just exactly the reverse. The keen merchant who is able to run his business with a minimum stock, and will be able to make his collections, will be the only survivor. Conditions and the outlook for a big fall business are very good in this territory.

Yours very truly,

Little Rock, Ark. FONES BROS. HDWE. CO.

# PROFITS ARE ONLY MADE ON GOODS IN STOCK

## A FLORIDA JOBBER'S SUGGESTION

Editor HARDWARE WORLD:

We consider buying the most important item in running a business of any kind. The retail merchant who buys frequently and in reasonable quantities is the one who pays his invoices more promptly, and is the most successful merchant. Of course you understand that "reasonable quantities" is a relative term; that is, relative to the demand.

There is no doubt that the motto of a retail merchant should be: "Buy frequently; buy in small quantities and from the nearest jobber; and turn over the stock as many times as possible." In this way he has less money tied up in stock; less insurance to carry; and less money which he may be compelled to borrow.

We think the best suggestion anyone can make to a retail dealer is to buy from his nearest jobber, even at a slight difference in price, for there is a great temptation on the part of retail merchants, when buying from a distance to buy in large quantities in order to make sufficient shipping weight, and make the order attractive.

While trade conditions are most excellent and the outlook exceedingly bright, there seems to us to be a bearing down tendency in prices, and a merchant should only buy for his immediate needs. This downward tendency is possibly as yet only of a tempermental character, but we believe it will assert itself in more definite form within the next twelve months.

Very truly yours,

KNIGHT & WALL COMPANY,

Tampa, Fla. J. F. White, Buyer.

---

Editor HARDWARE WORLD:

Optimism is better gospel than Pessimism. We all know credits are somewhat over-extended and that inflation exists, but this is a sequence to be expected and a condition fully recognized by our financial institutions, who are striving to effect a gradual contraction. Individual curtailment of all but essential credit demand, thrift and economy—a buy less and do more policy—offer a helping hand.

Disabuse yourself of the notion that widely advertised cuts mean a general and permanent fall in prices—until the law of supply and demand is repealed only larger production or reduced consumption or both can bring a real solution.

Statistics show an increasing number of merchants who are not meeting their bills punctually at maturity. It is high time to clean up slow moving stocks, scrutinize carefully new purchases and hold them in keeping with trade requirements. Few are so far removed that they cannot buy frequently in commensurate quantities and make use of jobbing facilities.

Quick sales turnovers and close collections is a sound theory and should be put into practice if one would keep his business in a healthy condition. It is not safe to extend terms of credit which outstrip the duration of purchasing activity.

Yours truly,

MARSHALL-WELLS CO.,

Portland, Ore. J. G. Beckett, Credit Dept.

---

A. Schleuter & Company at Berkeley, Cal., have found it advisable to establish a special department to handle their electrical and general housefurnishing goods. This department furnishes service to householders, especially the women buyers, and estimates on electric wiring and general installation.

## PROFITS MADE FROM SALES—NOT FROM PURCHASES

Editor HARDWARE WORLD:

The retail merchant usually has a limited capital, buys an assortment of goods, generally to his financial capacity, and appeals to the trade of a certain neighborhood or community. His customers must be secured and retained, because he can give service, which means he must have the goods wanted at the time his customer needs them, and that generally is immediately.

Therefore, if a retailer is to please the most customers, he must have an ample assortment of wares to deliver at once and not necessarily a large quantity of anything. Every customer likes to be offered an assortment to choose from, and should not be allowed to leave because he cannot find the article he seeks.

It is certainly a simple fact that we lose no sales when we have on hand the goods our customer desires to take away with him.

How can a merchant be most sure of his assortment being all that his capital will supply? The answer is again just as simple—by buying frequently in small quantities in the nearest market where he can get the quickest deliveries. The greatest advantages would be gained if he could replace on his shelves by tomorrow morning all the goods sold today.

Some merchants will argue that they do not buy at the right price if they do not buy in quantities, and this may be true of the merchant of larger means and who has a large trade, but even he may miss his calculation if he cannot turn this larger quantity frequently enough.

A larger buyer saves perhaps 5 per cent, maybe in extreme cases, 10 per cent, which is clear gain only provided he has the goods on hand ready to deliver to the waiting customer. If, however, the goods wanted are in transit from some distant shipping point, they only represent so much tied up capital. If they are still on hand when the market declines, they show only a loss on a larger quantity, and if they are only ordered but shipment is indefinite, they only embarrass the merchant who will delay ordering more, because he must pay for both lots.

Compare, if you can, the saving effected by larger purchases with the profit lost when goods are not on hand for immediate delivery. We know about what a larger buyer can save—5 per cent or slightly more—but we will not estimate in print the amount of profit lost when a customer cannot be served with what he wants. Our retail friends can do that better than we.

As service is necessary for a retail merchant to give to his customer, it is all important that he buy his goods where he can secure for himself the best service, so that he will have his goods on hand promptly when needed.

Service, therefore, is the foundation of all successful business, which means when your customer wants goods in your line, be prepared with courtesy and a knowledge of your business to give him at once the article he selects as the thing he seeks. A large assortment kept constantly complete will make the most sales, the greatest number of steady customers, and the largest profits. Profits are gained from sales, and not from purchases.

Yours very truly,

SLOSS & BRITTAIN,

San Francisco. Jos. Sloss, Pres.

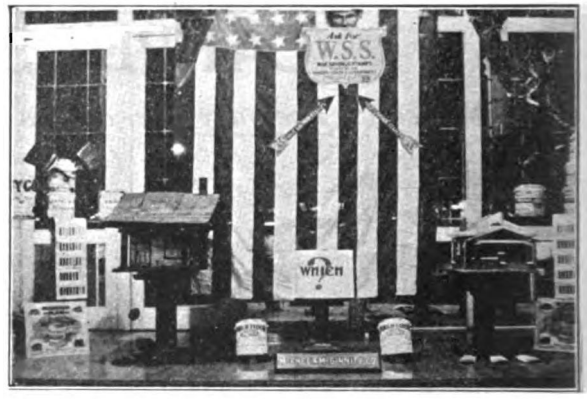
# Pointers and Pitfalls In Pushing Paint

THE fall is paint up time, in order to preserve the house and outbuildings, fences and walls from the ravages of rain and snow, wind and sun.

The hardware dealer should accordingly get busy and lay before the public the advantage of thus fortifying his castle. Advertising that is distinctive is sure to be read, and the dealer should therefore aim at originality and avoid the stereotyped "Go to Blank's for a full line of the best paints and brushes."



Several firms have of recent years found that a one column adv., extending the full length of the page enabled the advertiser to get alongside reading matter all the way, and as the eye travelled down the column, sooner or later something of special interest would be found. For that matter, the whole adv. should be made so entertaining that a person would read it of his own accord.

One of the recent one column advs. of the McPhee & McGinnity Co., Denver, is a good case in point:

> How about that chicken fence—and the back porch you have been promising your wife for several seasons to paint—and the new posts for the clothesline—and the coat of paint for the window screens (you remember how rusty they were this spring because you forgot to paint them last fall)—and the new coat of paint for the kitchen floor, and the glass for the garage door—and the new roofing for the chicken house to make it weather proof. Well, have you attended to all these? If not, why not?
>
> Suppose you sit down right now and make out a list of all the paint and supplies you need around the place this fall, and mail or telephone your order to us. It will come as fast as our Zip delivery system will bring it. Our telephone is Main 318.
>
> McPHEE & McGINNITY

Complementing this human interest copy, they arranged a striking paint window. In the background was draped an American flag, and on two pedestals were small models of bungalows. One was neatly painted in tints that harmonized perfectly, while the other was decidedly in need of a coat of paint, while it was evident that covering for the roof would also make the place more comfortable. Set on a lower pedestal between the two was a card with big red interrogation point, with the single word "Which" in black letters.

On the floor, and built up in tiers in the corners were cans of paint, while color cards showed the wide range in which these paints could be obtained. Just inside the door was a rack on which brushes of all sizes were displayed, and a card suggested: "Ask our paint man for the brush best adapted to your special needs."

McPhee and McGinnity at Denver, Colorado, combined thrift with patriotism in featuring paint and war savings stamps in the same window—two of the best methods of saving we know.

Another catchy advertisement that informed people they had better take time by the forelock and not wait until the bad weather set in, declared:

> WHEN NOAH STARTED TO BUILD THE ARK —Everybody laughed at him. Said he'd never need it. Well, you remember what happened. And it's a little that way yet. People put off painting and repairing their homes and outbuildings until the rains and snows commence—and then they can't do it. And they are uncomfortable all winter. And the little crack in the boards, or hole in the sheathing, spreads and becomes bigger, and warps and decays—and in the spring an entire new roof is needed. And all because a little paint and glass and tar paper and shingling was not used at the proper time. Paint up and clean up, and do it now.
>
> McPHEE & McGINNITY

The Fuller Paint Co., Long Beach, recently did some effective advertising that applies to the average hardware stock. Their printed announcement was decidedly pertinent and timely:

> LUMBER COSTS MORE THAN PAINT
>
> We have all laughed at the man whose roof leaked like a sieve. He said he couldn't climb up to fix it when it rained, and when the sun shone it didn't need it.
>
> PAINT COSTS MORE THAN IT USED TO. SO DOES FOOD—BUT WE STILL EAT. It's a false economy that would permit one to starve to death because food was high. It's a false economy that lets a house deteriorate in value at a rate ten times as costly as paint that would preserve it. You need good paint right now—we have it.

Their window showed the value of good paint. It was covered with green paper to represent grass, and on a rocky terrace was set a little cottage, which a half dozen little dolls in white suits were engaged in painting. In the

An attractive model house with these little figures busy painting is sure to attract attention. This window was by the Fuller Paint Company, at Long Beach, California.

rear was a small garage, and near this a young workman was mixing paint.

All of the tiny figures were mechanical ones, who constantly went through the mimicry of painting, their actions keeping a crowd constantly in front of the display. Lithographs of the paint adorned the wall, and stacked in the corners, as well as displayed down front were cans of same.

**Paint Sales Through the Store Paper**

The Roddenberry Co., Cairo, Ga., declare that their store paper has been their greatest asset, as it enables them to get their lines before their long list of subscribers in a more direct manner than general newspaper advertising would do. It is sent free to all their customers, and every campaign of selling merchandise is waged through its columns.

For example, late in midsummer they begin to talk about paint—but they talk about it in an interesting, instead of a stereotyped manner. Last season they first called the matter to the attention of their patrons by the little adv.:

> "When the wife complains, and the kids howl, and the atmosphere is blue—size up your home and its appearance. Then drop into the Roddenberry Store and pick out some new wall paper, and a little gilding, and a few cans of paint and varnish, and treat your home to a thorough overhauling. The wife will be only too glad to attend to the cleaning part—and the youngsters will help. And when it is finished you will all be as happy as a couple of honeymooners.

The paper contains locals after the manner of the average country newspaper, but they strive to link each local with their store in some manner. Thus, when Thomas Brown buys some paint they find out what he intends to do with it, and when Mrs. Smith gets some screening they diplomatically endeavor to ascertain for what purpose she intends it.

Due mention of the household improvements are made in the paper, and when the community learn that some half a dozen of their neighbors are fixing up for winter, others are moved to follow their example. During all the time that "paint" is kept before the public in the reading columns, prices of all kinds of paints, varnishes, brushes and renovating supplies are run in the advertisements.

## PAINT SALESMANSHIP

"Haven't you a small can of this darker green paint?" queried the customer, as the young man behind the counter peered around the rows of paint cans. "I'm afraid, sir, that we haven't a single can of the dark green in stock," he replied. "Couldn't you make use of a larger can?"

The customer shook his head and started away regretfully, for he was already late for the office and didn't want to try another store. Besides it was his first visit to this store.

"Wait, please!" The young man had a sudden idea. "The expressman has just been here, and maybe he brought that special order we sent in the other day. Yes, here it is," and "whack, whack, whack," went the nail-puller on the box. In a jiffy both the salesman and the customer were smiling over the exchange of a 25-cent-size can of the dark green paint for a nice, shiny quarter.

They were smiling because each, down in his heart, was saying, "This is Salesmanship."

## MONEY

If you save all you earn, you're a miser.
If you spend all you earn, you're a fool.
If you lose it, you're out.
If you find it, you're in.
If you owe it, they're always after you.
If you lend it you're always after them.
It's the cause of evil.
It's the cause of good.
It's the cause of happiness.
It's the cause of sorrow.
If the Government makes it, it's all right.
If you make it, it's all wrong.
As a rule it's hard to get,
But it's pretty soft when you get it.
It talks!
To some it says, "I've come to stay."
To others it goes with the swiftness of light.
Set not your heart upon it to the exclusion of taking no thought as to the means you use to obtain it, for after all money is only valuable for the good it will do to bring happiness to others.

## A TRUE TEST OF SUCCESS

James J. Hill said: "If you want to know whether you are going to be a success or a failure in life you can easily find out. The test is simple and infallible. Are you able to save money? If not, drop out! You will fail as sure as you live. You may not think so, but you will. The seed of success is not in you."

## LABOR SAVED AND PROFIT GAINED

(By R. B. Galloway, Richards & Conover Hardware Co., Kansas City.)

**R. B. Galloway, household buyer of Richardson and Conover Company of Kansas City, Missouri, has been thoroughly convinced of the possibilities of electrical appliances in the hands of the hardware merchant during all of his seven years with the Company. The electrical department was introduced by him and is his particular pride.**

First, and possibly the biggest argument, is the convenience and labor-saving so many of our electrical appliances now afford the housewife. Also there is the building that is now going on, especially of modern priced homes, carrying everything electrically that is possible to install. Where the small dealer has a clean stock of electrical appliances, such as fuse plugs, rosettes, receptacles, etc., he is getting a big profit on a small investment, which would go to the electrical stores if he did not carry the stock.

Then too, I think we should look at the labor saved in a home, where the head of the house can purchase the small appliances necessary for their convenience, and install them himself. The high price of labor leads me to believe the electrical appliance sales opportunity is here to stay. Where the hardware dealer is carrying a stock of small appliances, he will certainly play a big part in bringing high priced labor back to a normal basis.

It is the housewife who deals mostly with the hardware merchant, and when she finds out that small appliances can be purchased through her local hardware store this alone will prove a great advertisement, not only for the electrical line, but also for the hardware dealer.

## TRY IT

If you only knew the fun you'd get from smiling,
You would make a chance to try it very soon.
You will never find a pastime so beguiling—
It is jollier far than whining for the moon.

Oh, it makes your day a part of joy and beauty,
For it nearly always brings a quick response.
Though it fails sometimes, you still have done your duty—
And that's the satisfaction that one wants.

For you'll go to happy dreams, if you go smiling,
And perhaps you'll smile a little in your dreams;
You will find it is a habit so beguiling,
That the fun you get is funnier than it seems.

—Vlyn Johnson.

## ELECTRICAL APPLIANCES REPLACE STAPLE HARDWARE LINES

(By James P. Cummings, Mgr. House Furnishings and Cutlery Dept., Schwabacher Hardware Co., Seattle.)

"Why should hardware stores carry flatirons and butcher knives?"

By the term "appliances" we understand the household electrical appliances which are now in such general use. The hardware and general store dealer should give these items attention for the same reason that he gives attention to the predecessors of these lines. The electric iron, for instance, has taken the place of the old fashioned sad iron, and any hardware dealer who passes up carrying electric irons is passing up business that he formerly enjoyed.

The other electric appliances, such as electric toasters, electric stoves, hot plates, grills, percolators, etc., are coming into more general use every day and instead of being looked upon as luxuries are now considered a necessity for every housewife. Moreover, these articles replace the old fashioned wire and cone toasters, wire broilers, cook stoves and coffee pots, and when the dealer does not carry them he not only is losing this business but is giving his customers the impression that he is an old fogey who does not believe in modern goods.

The electric vaçuum cleaner is replacing the broom, and the hardware dealer is expected by the housewife to have this article in stock as he was formerly expected to have household brooms in stock.

Another feature that should appeal to the hardware dealer regarding electrical appliances is the fact that practically all of the electrical appliances on the market are nationally advertised, and the greater part of the selling effort is made by the manufacturer, so that if the dealer displays such commodities his part of the selling is comparatively easy.

Electrical appliances are profitable to the retail dealer, and the hardware dealer who carries a well assorted line of household electrical appliances will find at the end of the year, if he keeps account of that department, that his profits will be much greater than he was making on the old fashioned household appliances that have been replaced by this modern up-to-date line.

---

The Holly-Mar Co. of Centralia, Washington, has been awarded the contract for hardware on the new Elks Temple building there. Each piece installed will have a special Elk design upon it.

**3 for $3.50 OR $1.25 EACH**

# Makes Every Sale Worth While

*Least Sales Resistance* because broad, consistent advertising has made the Benjamin No. 92 Two-Way Plug one of the few electrical devices nationally known by name.

136,000,000 messages this year alone are hammering home the idea of a double utility for every single socket. They are hammering home, too, the fact that "every wired home needs three or more"—and are showing the consumer *why*.

*Greatest Selling Power* because the Benjamin No. 92 is the original Two-Way Plug. It is the only two-way plug with national consumer acceptance. It is a quality plug, great in utility and handsome in appearance.

Valuable Dealer Helps co-operate with you in securing quick turnover. Then, two uses for each socket creates a new market for other electrical devices.

3 for $3.50 makes a dignified sale— lifts your plug sales above the ordinary, and creates satisfaction for consumer and dealer alike.

Your jobber will supply you with Benjamin No. 92 Two-Way Plugs in either single or three-in-one cartons, in any quantity.

# For the Provident Woman, Mirro

Age does not diminish the usefulness of Mirro Aluminum. Mirro lasts for years, and serves a second generation as faithfully as a first. It is only natural, then, that she who takes thought of the morrow should buy Mirro when furnishing her kitchen.

And Mirro utensils are beautiful, too. This adds to the pleasure in their use. It is for more than beauty and long wear, however, that Mirro utensils are famous. Their features of convenience also make them notable. You do not find these features in ordinary aluminum ware.

**Mark, for instance, in this Mirro Aluminum Sauce Pan:**

**(1) Hollow steel handle, comfortable to the hand, with eye for hanging. (2) Tightly rolled, sanitary bead, free from dirt-catching crevices.** (3) Two correctly formed, easy-pouring lips facilitate pouring from either side.

(4) Strong, flat-headed rivets keep the handle *always* firm and secure. (5) Smooth, rounded edges, easily cleaned. (6) Famous Mirro finish. ☆ (7) Famous Mirro trade-mark, stamped into the bottom of every Mirro utensil, and your guarantee of excellence throughout.

Fully to appreciate the significance of this Mirro trade-mark, remember that Mirro is the culmination of more than a quarter of a century's **experience in aluminum ware making, and that back of the Mirro guarantee is the world's foremost manufacturer of aluminum ware.**

**Mirro is sold everywhere at the better stores.**

**Write for miniature catalog.**

# Now For 1921

Time passes much more quickly than one realizes. Plans are made for the future and before one can "turn around" that future has become present.

In planning for future business, it is well to plan far ahead and not only to plan, but to act so that when future becomes present you will be ready.

There's tremendous capacity in this big new stove plant. It was built expressly and only for manufacturing Nesco Perfect Oil Cook Stoves.

The demand has been so great for

## Nesco NESCO PERFECT Nesco

## Oil Cook Stoves

that it has been more than we could do to take care of everybody. But a smoothly running factory is catching up and will be ready for your orders.

To make sure of your supplies, it would be well to start right now to contract for 1921 delivery on Nesco Perfect Oil Cook Stoves. These are the stoves with the Rockweave Wick that will not creep or stick.

Write to your jobber about your 1921 requirements and place order promptly.

# ACCESSORIES WILL CONTINUE IN GREATER DEMAND

## BE AN OPTIMIST—ANTICIPATE YOUR WANTS, THEN RING THE BELL

Editor HARDWARE WORLD:

The automobile and automobile accessory business stands near the top in the industries of the United States, and is too far advanced for any propaganda against its progress to halt any of its workings very long at a time. There was a little hindrance for a short period that is now blowing over, and wheels are turning practically normal again.

There was never a time when buying through the jobbers and dealers so varied, and conditions so peculiar, as the past few seasons. We have found in some instances in some parts of the country where the jobbers and dealers alike were really hungry for legitimate merchandise, "that they could get delivered," must have something to sell, while in some other sections and some instances the jobbers and dealers alike were afraid to buy anything, and only bought enough to barely keep their doors open, thereby sacrificing on prompt deliveries and paying advanced prices, etc.

The former condition was due largely to optimistic live and growing concerns, which were spreading the right sort of propaganda among the trade, while the latter was only looking for the sort of propaganda that predicted hard times due to quick and acute dropping of prices, and everything going to smash generally, due to the close of the war. And were more hungry for that sort of propaganda to substantiate their theory and beliefs than to be an optimist and spread optimism through their respective territories, stimulating their trade.

I do not believe prices will go to smash all at once, which would be ruinous to thousands, neither do I believe prices are generally and slowly decreasing for a time at least, in this industry, and believe the jobber and dealer alike, while he can be conservative, especially along the line of buying extreme novelties not yet established, or merchandise from so-called "curb stone" concerns, that in six or eight weeks you can neither find the man or his products, but should protect his business and do his business the greatest service by anticipating his wants and place his 1921 orders as early as possible, which helps the jobbers, their dealers, the dealer better serves his trade, and altogether helps the manufacturer to anticipate his production, which assures deliveries, also helping the price situation as well as the service, and no legitimate manufacturer or jobber would decline to protect his trade on future signed orders against any material change.

I personally don't believe there was ever a time when it was so essential for early placing of orders as it is this season. Prepare ahead for your stock, prepare ahead with the right sort of propaganda well distributed among your trade, and do it every day.

It's just like the man who once said he did not have to advertise. He had been in business in the same town in the same building for forty years and everybody knew him, knew what he sold and there was no use in spending his money advertising any more. To such a man I would say, there is nothing so well known in the world today as religion; it is known by every class and race in every country, every city, town and hamlet and dates clear back to John the Baptist, but, you'll notice that every Sunday morning they still ring the bell just the same.

The jobber and dealer is in the merchandise business as a chosen trade, and to get the best results they should anticipate their wants far enough in advance to secure the best service in quality, price and delivery, and then "ring the bell" every day, instead of once a week.

Yours truly,

RUST MANUFACTURING CO.,

Marshalltown, Iowa. E. R. Rust.

## 1921 WILL BE A BUSY YEAR

Editor HARDWARE WORLD:

Our opinion, whatever it may be worth, regarding the present economic situation is that it is only temporary and that we will see a revival of business on a large scale within a month or two—that 1921 will be a tremendous year and that the country's prosperity will be greater than ever before.

We are not in sympathy with crape-hangers and have considerable respect for one Henry Ford, who, we understand, has sufficient confidence in the optimistic viewpoint to not only continue production on the same scale, but is actually planning to increase his production in the near future by about 30 per cent. We understand that Henry is buying material in increased quantities, showing his faith in the future and his wisdom as a buyer in taking advantage of the present situation to buy advantageously.

We are sending out today to all of the jobbers handling our line the following letter, which is self-explanatory:

"There will be no reduction in prices this year and starting January 1, 1921, we will protect you against loss through price reductions for 60 days after the purchase of goods.

"We have recently had a number of inquiries from jobbers asking if any reduction in price was contemplated in the near future. This has suggested to us, in line with our policy of cooperation with our jobbers, that we can work more closely with them in this respect.

"There is no price reduction of any kind possible on our line at present and you may accept this letter as guaranteeing you against any decline in the price of Black & Decker Portable Electric Drills, Electric Valve Grinders or Electric Air Compressors between now and December 31, 1920.

"Furthermore, we take this opportunity of advising you that after that time you will be protected against loss through price reduction for a period of sixty days after purchase of any of our products. This does not mean if conditions make it possible for us to set a lower price on our products that we will give you sixty days notice and defer the reduction for that length of time. If a reduction is possible it will be made promptly, so as to give the ultimate purchaser the benefit and we will absorb any loss which would otherwise be caused the jobber who bought within 60 days before the change in price."

Yours very truly,

THE BLACK & DECKER MFG. CO.,

Baltimore. G. W. Brogan, Adv. Mgr.

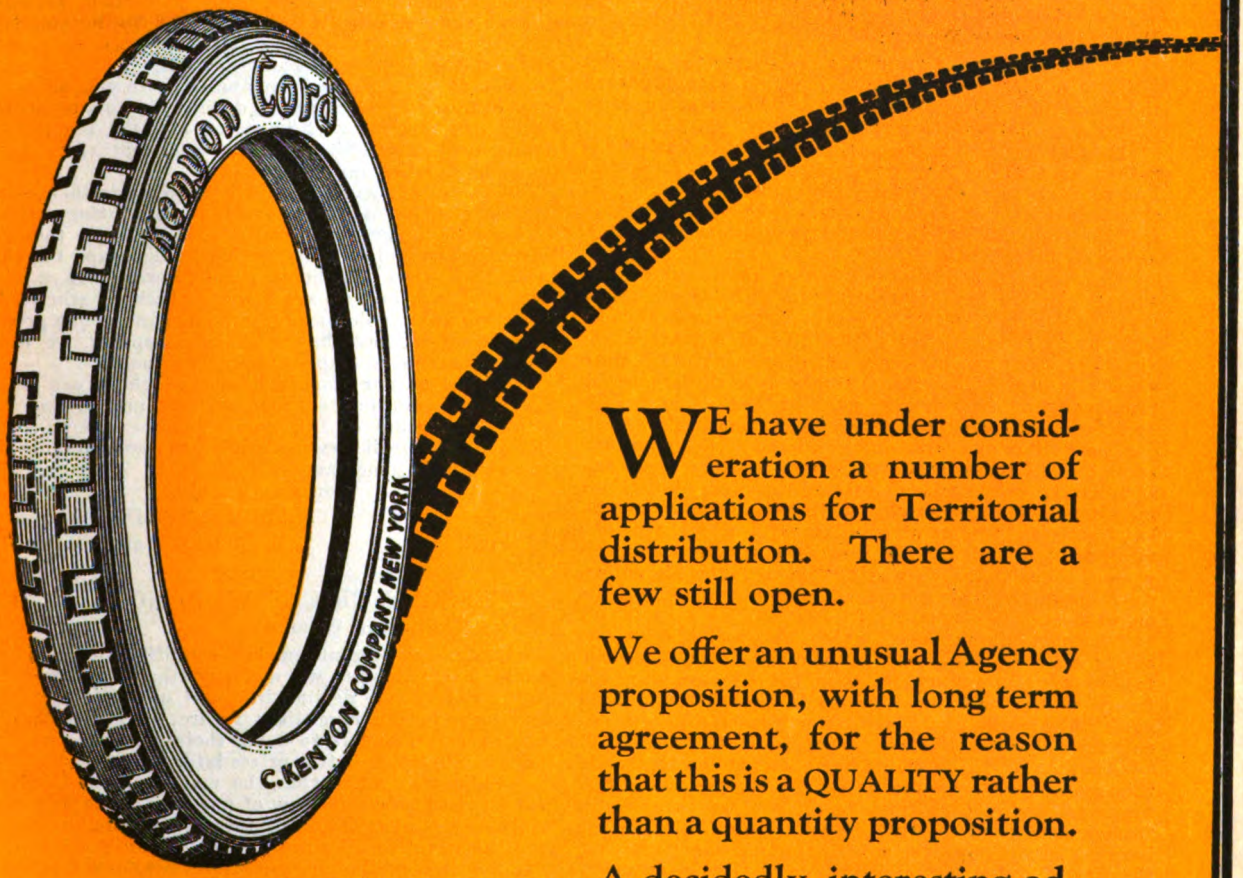
## NOT WISE TO CURTAIL PURCHASES

Editor HARDWARE WORLD:

We wish to say that we cannot see the wisdom of curtailing purchases or reducing stocks on the part of either the dealer or the jobber at the present time, except in occasional instances where the jobber or dealer may be overloaded on certain lines.

We do not anticipate any decline in prices in the near future, and if stocks of merchandise generally are allowed to run down to the point where later on a shortage will be created because of the inability of manufacturers to take care of any sudden influx of orders, it will certainly have the reverse effect, and result ultimately in a condition such as obtained during the war period. Manufacturers today are keyed up to substantial productions, but a normal flow of business must be forthcoming to keep the output up consistently to normal demand.

Very truly yours,



ECLIPSE MANUFACTURING CO.

Indianapolis. R. M. Franklin, Sec.

# MOST MANUFACTURERS PROTECT AGAINST PRICE DECLINE

## NO POSSIBLE REDUCTION IN ROBES

Editor HARDWARE WORLD:

We do not manufacture anything in the steel line, but the textile goods that we manufacture, which go to the hardware trade, in the way of blankets and robes, are a season good's business which have to be manufactured for a long way ahead and we can see no possible reduction in any of these goods for fall business or for spring business.

Boston. L. C. CHASE & CO.

## ANALYSIS OF TIRE SITUATION

Editor HARDWARE WORLD:

It is a problem to attempt at this time to give any definite advice as to the policy which should govern the trade in making their purchases and placing their orders and specifications for the coming season.

Conditions during the past few months have been rather unusual in the tire industry and it is a well known fact that automobile tires are not moving at this time with the rapidity expected by manufacturers and the trade last winter at the time orders from dealers were being filled.

The present conditions are due to a number of causes. In the first place many manufacturers urged their dealers last winter to lay in larger stock of tires than usual owing to the probability of a marked advance in the price of tires. The manufacturers were sincere in urging these large stocks upon dealers as the previous year had found most of the dealers with depleted stocks when the demand for tires was greatest.

The dealers of course on the advice of the manufacturer laid in these large stocks and in many cases unfortunately the dealers assumed greater obligations than conditions warranted. With these large stocks on hand, the tightening of credits, with which you are familiar, has undoubtedly worked a further handicap upon the dealer, as he was unable to make his collections promptly and consequently unable to meet his obligations.

The non-buying wave which has swept over the entire country, was very largely responsible for the failure of the automobile user to purchase tires as freely as has been his practice in the past and then again the tightening of credits has made it more difficult for the automobile user to meet his obligations.

Another condition which has affected the tire trade this season has been the extremely late season which prevented many cars from being used as early as in former years, and to top the entire situation there has been so many improvements in automobile tires that the tire of today, especially the cord tire, gives many more miles of actual service than did tires a few years ago. This, of course, has the effect of causing the automobile user to use a smaller number of tires per year than has been the practice formerly.

Although the writer will not attempt at this time to offer any advice to the trade in reference to purchasing tires for next year, he believes that many dealers will profit by the experiences they are passing through at this time and will consequently not be as inclined to purchase large stocks of tires this winter as they have in past years.

Not only at this time, but at all times, the writer feels that the trade should exercise the greatest precaution in their purchases of tires to insure that they are purchasing a tire of certain quality, backed by an organization of the utmost responsibility and ability to stand behind the products which they manufacture.

Appreciating that this is not much of a suggestion for the majority of the trade, but trusting that the same may prove of interest, we remain,

Very truly yours,

THE AMAZON RUBBER COMPANY,

Akron, O. A. H. Leavitt, Sales Mgr.

## GOODS WILL CONTINUE HARD TO GET

Editor HARDWARE WORLD:

According to our knowledge, 75 to 90 per cent of the manufacturers are having enormous trouble in securing sufficient supplies of material to satisfy the demands of the wholesalers.

The writer just returned from a buying trip to the East and finds that stocks everywhere are very low and that new supplies are very slow in coming in. In many instances the supplies are completely exhausted. This is particularly true in the light sections of steel, such as small round, bars, band and hoop, etc. Although the writer called on twelve of the biggest steel warehouses he was able to purchase only very, very little of the supplies so badly needed.

You can easily guess the result. There will be hardly any chance for lower prices during the coming season. While the steel market is easing off, yet the railway transportation facilities are so bad that there is no immediate relief in sight.

We are cautioning our jobbers to place their specifications early. Jobbers have taken a waiting attitude and are buying very carefully. This in more than one instance resulted in their having to telegraph for their goods and have shipments come forward via express. Many of our jobbers are losing valuable business, because we are unable to supply the demand at the present time, whereas, had they specified in spring, we would have been able to amply supply their needs.

As far as our line is concerned there can be no reduction. Marquette products have not advanced in price on account of the war and there can be no reduction now until raw materials drop considerably and the supply becomes ample.

Yours very truly,

MARQUETTE MFG. CO., Inc.,

St. Paul. R. E. Lange, Sales Mgr.

## ACCESSORY PRICES WILL NOT DECLINE

Editor HARDWARE WORLD:

Regarding present market conditions from a purchaser's standpoint, we will say, that we cannot see any reason for a decline in metal goods of any kind, any time in the immediate future; and therefore see no reason for buyers to delay their purchases with the hope of obtaining better prices later on.

While we realize that the manufacturer is always expected to take this view of any sort of market conditions and is always an optimist in his opinions regarding sales; yet in all sincerity, we cannot see how there can be any decline in raw materials, any time soon, with the labor and transportation situation as it is.

In addition to this, most every manufacturer has had to absorb a lot of extra costs, such as increased labor, express charges on goods that heretofore he has received by freight, premiums on raw materials that he has been forced to pay in order to keep his plant going, and many other items of this kind which would not enter into the cost of merchandise in normal times.

These additional costs have been in the majority of instances absorbed by the manufacturer; and improvement in transportation, slight declines in materials, etc., will not reflect any decline of the finished product for some time; even if the manufacturer is taking advantage of them in his purchases.

While unquestionably, there is a trend in some lines of business towards something like normal conditions again, we feel that we can confidently say that there is no cause for alarm or fear on the part of any buyer that the bottom is going to drop out of the market; or that better prices can be obtained by postponing their purchases for a time. Yours very truly,

CASEY HUDSON COMPANY,

Chicago. H. C. Pogue, Sales Mgr.

Digitized by Google

At the Uniontown Speedway, in the 225-mile Universal Trophy race, Tommy Milton added another victory to the AC Spark Plug record for 1920. His triumphant Duesenberg, which averaged 94.9 miles per hour for the distance, was equipped with AC's. So were the Duesenbergs of Eddie O'Donnell and I. P. Fetterman, who finished third and fourth respectively. These drivers knew that AC Plugs would serve them unfailingly regardless of what was asked of them. Dealers, in selling AC's, know, too, that their customers can ask nothing of AC's that AC's cannot give. That's why it pays to concentrate on the complete AC line. Dealer information sent on request.

# ACCESSORIES WILL BE IN STILL GREATER DEMAND IN 1921

## SHOULD BE NO HESITATION IN ORDERING

Editor HARDWARE WORLD:

Our suggestion would be that the trade, namely, wholesale and retail, do not hesitate in any way in placing their purchase orders as they have usually done in the past.

This would be more applicable to the iron and steel market, inasmuch as our product is made wholely from steel, and due to the great shortage of this class of material in comparison with what the country is able to produce and what the world is demanding today, it would appear to us that this article will become more scarce as we enter into the future. There are many avenues that have not as yet even received any of their quota of steel, due to the reason there has been a great scarcity, which has been diverted into other lines.

When you take into consideration the advance now being granted to the transportation system of this country and the situation that they are in as to their equipment, etc., their purchases no doubt will be tremendous very shortly; in fact we might say will be without precedent in comparison with what they have been granted in the way of rates.

Although there is a tendency at the present time to readjust the price market, we can not see just where it will have a tendency to lower prices in any way, especially articles that are of a staple nature and must be required in order to keep the wheels of industry moving. Prices in some lines have been out of gear, but where such prices have been found to be higher than they should be they have been found to be applicable to items that have been called "non-essential," but prices on these items will soon be reconciled according to general conditions and we can not see anything but a continued period of prosperity for a number of years to come.

Trusting these few words will be of value to you in advising the buying trade in general, through the "HARDWARE WORLD," we are,

Yours respectfully,

HIGGINS SPRING & AXLE CO.,

Racine, Wis. Geo. L. Pederson.

## NO POSSIBILITY IN DECLINE IN SPARK PLUGS

Editor HARDWARE WORLD:

There is no question in our minds but that this is the time when both retail and wholesale trade should order in conservative amounts, taking in consideration, however, the length of time that shipments are in transit under the present abnormal freight conditions. That they should exercise considerable care in placing large orders, particularly in those lines which have been advanced in the past year seemingly out of proportion with their general trend of prices, due in many cases to shortage.

There is no question but what there will be declines in the next six months in some lines, but without reduction costs of labor and steel, many items can not be reduced in price. There have been practically no advances in the spark plug field since the first of the year, and there seems to be not the slightest possibility of a decline.

It would seem to us that the trade should exercise particular care with reference to such items as are not absolute necessities, as money tightning up on the part of the buying public will undoubtedly affect these things first.

Yours very truly,

TUNGSTEN MFG. COMPANY,

Marshalltown, Iowa. H. E. Woodward, Sales Mgr.

## TIRE DEALERS PROTECTED IN PRICE

Editor HARDWARE WORLD:

There is no question but what the tire business or rubber business in general will show a great improvement between now and November 1st.

There has been for the past sixty days an overproduction of tires in certain kinds—that is—the great falling off in demand for fabric tires has created an over- production of fabrics, while the cord tires, which have been constantly on the increase, there is a shortage of.

The over-production, however, for the past month has been gradually diminished and we believe this over-production will be entirely used up within the next thirty days when matters will again become normal.

We believe that it is advisable for both wholesale and retail concerns to decide at as early a date as possible the line that they intend to push for the coming season and get their orders placed so as t allow the manufacturers to meet their shipping dates promptly, as it is customary with the rubber companies to give dating on all spring dating orders or on orders booked during the months of October, November and December for January or later shipments, and as has been the custom with rubber companies to guarantee against any decline in price for a term of sixty days from the date of shipment and on spring dating orders for the term of the dating, the wholesale or retail dealer has nothing to lose and has the assurance of having his goods when needed.

Furthermore, he has sufficient time by making an early decision to lay his plans and do the necessary missionary work to get his share of the business when the season does open up.

Care will have to be exercised by both wholesale and retail dealers the coming year, as the tendency will undoubtedly be to hold off their buying based upon the experience of the past spring, which was extremely late, and which, therefore, was not conducive of an early volume of business in the tire line.

This may never happen again and great care should be exercised, as undoubtedly a great many of the dealers will be caught short-handed should we enter into an early season in 1921.

Yours truly,

THE MASON TIRE & RUBBER CO.,

Kent, O. J. H. Diehl, Vice Pres.

## MONTANA DEALERS USING CARE

Editor HARDWARE WORLD:

We believe the hardware trade in this section are realizing more and more, the necessity of buying in smaller quantities, which gives them an opportunity of greater turnover, also enables them to carry a more complete stock.

The merchants find that by buying their requirements frequently and in small quantities the chances for accumulation of dead stock is nearly eliminated.

In spite of all that is done to prevent it, dead stock will creep in and it behooves the merchant to get his cost out of these goods as soon as possible and, if necessary, to take a loss to move them and to put this money into saleable merchandise. The longer dead stock is carried on hand, the more expensive it becomes and the harder it is to move it.

On account of the restrictions of credit, it is up to the merchants to follow their accounts closely and to shorten the length of time extended to their customers. Yours very truly,

MONTANA HARDWARE CO.,

Butte, Mont. E. S. Woodland, Mgr.

# PREDICTIONS ARE THAT GOODS WILL BE AS SCARCE IN 1921

## BUY SMALLER QUANTITIES MORE OFTEN ON A COST BASIS

Editor HARDWARE WORLD:

We have for the past two months been using our very best efforts in directing the retail merchants in our line to employ more conservative methods in the operation of their businesses. We have in a great many instances urged the retailer to place his business on a cash basis and to exercise extreme caution in extending short time credits.

We have also urged them to buy smaller quantities and more frequently, thereby reducing their stock and using more staple lines. The results along this line so far have been quite satisfactory, and while the volume of business has been considerably reduced, we believe the retail merchants have placed their affairs on a much more satisfactory basis.

Where accounts have accumulated and become past due with our customers, we have, in many cases insisted that they buy on a C. O. D. basis until their present past due accounts had been settled. In some other cases, they have voluntarily bought in smaller quantities on a C. O. D. basis.

We believe the acute crisis in the present conditions have passed some time ago, and a much better feeling exists now.

The crop conditions are looking exceedingly favorable, and we believe that another thirty days will bring considerable improvement.

One of the large agricultural products in our section is beet sugar and the acreage this year is nearly double that of last year and the yield per acre will be very satisfactory. The farmers will receive from $13.00 to $18.00 per ton for their sugar beets when delivered to the factory, and when this crop is harvested, we expect conditions will be in much more satisfactory condition throughout our territory. We, therefore, believe that while we will do a reduced volume of business from that anticipated for the year, conditions will right themselves a little later on.

Yours respectfully,
MOTOR MERCANTILE COMPANY,
Salt Lake City, Utah. By A. D. McMullen, Pres.

## KEEP WELL ASSORTED STOCKS

Editor HARDWARE WORLD:

It is rather a difficult proposition, under existing conditions, to prophesy as to what the fall and winter will bring to us. Consequently, we shall be a little on the conservative side in giving advice to our customers.

Frankly, we do not anticipate any reduction in prices in hardware lines. There is absolutely nothing to indicate such a possibility for some time to come, but taking everything into consideration, we would recommend that both wholesalers and dealers should buy sufficient to give them well assorted stocks. We do not suggest heavy purchases, and on the other hand, we would greatly discourage the putting off of buying until stocks were seriously depleted.

Yours very truly,
BUTTERFIELD & COMPANY,
Derby Line, Vt. L. H. Laythe, Sales Mgr.

## ACCESSORY PRICES WILL ADVANCE BY DEC. 1

Editor HARDWARE WORLD:

In reply to yours of the 26th, we beg to advise that we firmly believe that it is profitable to make purchase between now and December 1st, as an increase in price will no doubt take place at that time.

Yours truly,
MODERN ELECTRIC & MACHINE CO.,
Indianapolis. T. A. Meyer, Pres.

## ACCESSORIES IN GREATER DEMAND THAN EVER

Editor HARDWARE WORLD:

For six years we ran our factory 24 hours a day without laying our men off at any time, except on Sundays, starting in Sunday night and continuing through the week until the next Sunday morning. Now, as stated, we kept this up for six years. During that time we had, of course, as other manufacturers had frequently, a great deal of trouble in securing material but always by express by paying premiums and otherwise we were able to keep our factory going.

We greatly increased our facilities and added new equipment in January and have tried to continue the same policy this year, but for more than 60 days now our factory has been closed down from one-half to two-thirds of the time because of our inability to get material to keep our plant running.

We have had an increase in our business for the first six months of 1920 amounting to more than $100,000. On the first of August last year we had on hand made up ready for shipment more than $100,000 worth of merchandise. On the first of August, 1920, we will not have a dollar's worth of merchandise made up for shipment and the big months in our line are August, September, October and November, but on the other hand, we are greatly behind. Under the circumstances, as we see it, there is just one thing for the jobbers and the retailers to do and that is to anticipate their wants.

There may be less cars sold during the coming year than in the past years, but we feel that the demand for accessories and everything needed in the use of automobiles will be more greatly needed during the coming year than ever before.

Sincerely yours,
FRANK ROSE MFG. CO.,
Hastings, Neb. D. D. Duncan.

## NO DECLINE IN LUBRICATING OILS

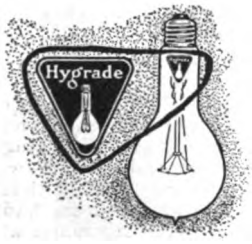
Editor HARDWARE WORLD:

In view of the interruptions to shipments in carload lots to distributing points, and from there to customers in L. C. L. lots, caused by the numerous embargoes, delays, etc., that we have had in the past, and of which there is every reason to believe there will be a continuation in the future, and in view of the increased freight rates that are surely coming, we believe it advisable for every retailer to stock up on all commodities to the extent that his locality demands, and his ability to pay for according to the billing terms will warrant.

In our opinion there will be no declines in the price of staples like Havoline Oil.

Yours very truly,
INDIAN REFINING COMPANY,
New York. Geo. F. Fox, Sales Mgr.

## PRICES ON AUTOMOTIVE EQUIPMENT WILL NOT DECREASE



Editor HARDWARE WORLD:

There is not one chance in a thousand of prices going down between now and the first of the year.

As a matter of fact, at the present time we are buying steel at a higher level than at any time during the past two years, and this, of course, together with the labor situation, does not indicate that prices can possibly fall very much.

Yours very truly,
APCO MFG. CO.,
Providence, R. I. Thos. F. Wilson, Pres.

# Harvey RACINE SPRINGS

## "You Can Trust That Spring"

THAT is the basis on which you can sell Harvey Springs. The car owner can trust them absolutely because they are built on such rigid standards that possibility of breakage in ordinary usage is simply out of the question.

Harvey Springs are specially designed for easy riding and great strength. They're boltless—no weak spots in them. And they're tempered exactly right, each leaf exactly the same by the patented Harvey process. Then, too, they are put to the supreme Harvey test for strength—a test under such great force that no ordinary spring could endure it. That's why we guarantee Harvey springs against breakage or sagging. The margin of safety, the reserve strength, is so great that Harvey Springs live up to their guarantee even under emergencies.

Harvey Springs mean protection to the dealer—and more sales. Dealers are well supplied with sales helps, movie slides, window decalcomanias and inside wall posters as well as the helpful Harvey Spring Book.

There's a jobber near you who can supply you on short notice with any of the 1500 Harvey Springs. Write to us or to your jobber for the new Harvey Book.

# DELAY IN ORDERING OFTEN MEANS DISAPPOINTMENT IN GETTING

## FILE MANUFACTURERS KEEPING BUSY

Editor HARDWARE WORLD:

At the present time the tendency is towards close buying and while we are manufacturers, we do not believe it would be sound advice for us to suggest to jobbers that they buy "wide open," but on the contrary if we were in the jobbing business we feel that we would be very careful in buying at present, even though we, as manufacturers, do not feel that prices will fall off for some time to come, as in our line labor and the price of raw materials as well as all other materials are stiff and do not show a downward tendency.

Naturally we feel we know a little more about our own business than general business and we find ourselves today with considerable number of orders on hand with shortage of good labor to produce same, and we feel that it will be some time before we are able to "catch up" on orders.

Very truly yours,
McCAFFREY FILE CO.,
Philadelphia. J. J. McCaffrey, Treas.

## DELIVERY OF GOODS MOST IMPORTANT

Editor HARDWARE WORLD:

In regard to the policy which should govern the trade, both wholesale and retail, in making purchases for the coming season, we wish to state that our policy is to purchase according to our regular requirements, however, conservatively, by using care not to purchase beyond our requirements.

We are making due allowance for delays in transportation and the inability of manufacturers to meet promptly the demands made upon them.

We do not anticipate any appreciable reduction in price. We are urging our customers to cooperate with us by anticipating conservatively, and we would not advise deferring the placing of orders for the prospect of obtaining lower prices, because the question of delivery is an important one.

Yours very truly,
ALVORD REAMER & TOOL CO.,
Millersburg, Pa. F. T. McGuire, Pres.

## NOTHING TO BE GAINED BY DELAY

Editor HARDWARE WORLD:

Any dealers who delay placing their orders for padlocks or builders' hardware can only be working to their own disadvantage. Transportation conditions are not much improved, there is possibly more labor available in some sections, notably in those sections where textile mills are grouped. In other sections shortage of labor continues.

The steel situation is not materially improved, and it is becoming increasingly difficult to get anything which is casted. Moulders have deserted their trade and gone to less strenuous occupations. There is not nearly enough foundry capacity of any kind to at all meet requirements. Probabilities are many factories will have to run very short time, or close down entirely, this winter because of lack of fuel.

The Lancaster District will not be so much affected as some other sections because nearly all Lancaster industries run by current from electric power generated by a large hydro-electric plant on the Susquehanna River, a short distance from Lancaster.

Generally there is nothing to be gained and much to be lost by deferring the placing of orders for padlocks and builders' hardware at the present time.

Yours very truly,
THE SLAYMAKER LOCK CO.,
Lancaster, Pa. S. R. Slaymaker, Gen. Mgr.

## NO LOWER PRICES ON SPARK PLUGS

Editor HARDWARE WORLD:

We believe that both the wholesale and retail trade should watch their purchases very closely for the coming season and especially in order that they do not overbuy on slow moving merchandise and that they have sufficient stock of all merchandise on which there is a good demand.

We do not believe that the wholesaler or retailer can afford at this time to allow their stocks to run down and especially so due to the fact that transportation conditions are very bad and they must protect themselves against delay in shipping.

Insofar as we are concerned there will be no lowering of prices in our lines and from what we have been able to gather it looks as though there will be an increase in many lines rather than a general lowering of prices. Yours very truly,
CHAMPION IGNITION CO.,
Flint, Mich. W. S. Ishmond, Sales Mgr.

## ALL STEEL PRODUCTS WILL ADVANCE

Editor HARDWARE WORLD:

It is our opinion that there will be an advance in the price of all steel products instead of the price being lowered. We do not see how it would be possible to be otherwise with the present condition of the steel market.

Our advice to merchants is to place their orders now.

Very truly yours,
WILL B. LANE UNIQUE TOOL CO.,
Chicago. By Will B. Lane.

## AIR COMPRESSOR EQUIPMENT WILL BE IN ACTIVE DEMAND

Editor HARDWARE WORLD:

We doubt if anyone is capable of giving even a reasonably correct prophecy on the price tendency between now and next March and it is certainly impossible to foretell the sales market, as this is purely a matter of public psychology.

Such analysis of the future, as we are able to make, relates purely to our own line and this, of course, means that we are dealing with only a limited field. There are particular reasons why compressor equipment should be in active demand and, perhaps, this also applies to other commodities. It is true, certainly, that a shortage of machinery does exist, and, perhaps, we may look for a continued sale of all worthy mechancial equipment for some time to come, but in the case of compressors recent developments have made present equipment througnout the country notably inadequate and the proprietor who senses this situation is replacing his equipment with larger machines of different characters.

Even though such a circumstance exists, the sales are bound to be limited if the present jobbers' state of mind prevails throughout the winter. Actual need for merchandise is not always a convincing reason for the buyer's action. Unless his own business is flourishing, he is apt to be reluctant to spend money for equipment.

With good crops in prospect and the mining industry in healthful condition, with the railroads returned to normal condition, there is reason to anticipate good business. In that event, we feel safe in saying that, so far as compressor equipment is concerned, next year will break all existing records. This rather indefinite outlook is the very best we can give at present writing.

Very truly yours,
BRUNNER MFG. COMPANY,
Utica, N. Y. J. H. Mehan, Sales Mgr.

# SUCCESS MEASURED BY ABILITY TO TURN STOCK

## FRANK EXPRESSION FROM AN ACCESSORY MANUFACTURER

Editor HARDWARE WORLD:

We do not wish to have our name appear regarding any article relative to business conditions.

We cannot see any great tendency towards lower prices, but we do believe there is a decided tendency towards a slackening of business due to the banks having materially cut down on credits, and the high interest rate prevailing.

We do not believe it is prudent to delay placing orders with the idea of getting lower prices, but if there should be a delay in placing orders, it should be simply with the idea of letting stocks get to a minimum in order to assist in deflation, and to put money into the banks so that there will be no shortage of funds in order to move the coming crops.

The only reason we can also give for not suggesting orders be delayed too much is that there is going to be traffic congestion just as soon as crops move, and unless customers get a stock into their house to carry them, at least for the present and up to the first of the year, they will probably find themselves seriously embarrassed later on, when you also consider that during the winter months, due to bad weather, traffic is always delayed.

We do not believe that it is prudent to make commitments beyond the first of the year, except on certain items on which it is difficult to get deliveries.

We see quite clearly for the first of the year, and do not see any cause for any decline in prices; except on a few commodities there may be a somewhat lowering of price, but in the hardware line we do not believe there is going to be any change that should cause a hesitation on the part of the buyer.

On such items as rubber goods there will probably be a slight decline, also there are a few other items that we might mention, but on items where metals are concerned we can quite clearly see no decline in price for the balance of this year.

Yours very truly,

## IF A CHANGE OF DIET COULD BE HAD

Editor HARDWARE WORLD:

On account of the uncertainty in market conditions and the stringency of money at the present time think the careful hardware merchant should buy as near home as possible, buy often and in small quantities until conditions right themselves.

History of market conditions after the civil war and also the Napoleonic wars, showed that when goods started to decline they declined approximately 10 per cent each year until they reached their proper level.

We expect some declines in hardware which will be brought about more by the efficiency of labor than due to the declines of raw materials.

After the armistice was signed the government asked the U. S. Steel Corporation to establish a price on iron commodities that would let the country go on and develop—they established such prices and have held to them. Some sharp-shooters outside of the corporation have asked and gotten prices far in excess of the prices named by the corporation, but the basic prices on most lines of hardware have never been unreasonable as compared with some other lines of goods.

We, therefore, do not expect the dropping off in values that may come in other manufactured goods. It is too bad the common people could not eat pig iron and wear tin clothes and sweeten their coffee with sugar of lead.

Yours truly,

GEO. A. LOWE COMPANY,

Ogden, Utah. By J. R. Cooper, Treas.

## EXPECT HEALTHY CONDITIONS TO CONTINUE

Editor HARDWARE WORLD:

We are not prepared at this time to form an opinion regarding conditions that will prevail the last quarter of this year and cannot conscientiously advise the trade to either buy or not to buy for later delivery. It is our belief, in so far as the rubber business is concerned, that any overplus of production that has been created by the delayed spring season will be absorbed by the first of October and that from that time on the same healthy condition that has prevailed heretofore will be again in effect. Whether this will apply generally or not we think is too difficult a situation to analyze.

Very truly yours,

EMPIRE TIRE & RUBBER CORPORATION,

New York. F. I. Reynolds, Vice-President.

## ASBESTOS WILL NOT DECLINE

Editor HARDWARE WORLD:

From the best information at hand at this time, there does not seem to be the remotest possibility of any decline in the cost of asbestos. The market has constantly advanced in the past few years and at the present moment is higher than it has been any time in the past. A complete breaking down of the automobile industry is the only thing, in our judgment, that could possibly force asbestos to a lower level, and in views of the supply that is available, it would seem that any shrinkage that might come in the industry could hardly be expected to force this material to a lower cost level.

In view of the present conditions we cannot see the wisdom of any concern buying far into the future, on the other hand, we can see no object in the trade refraining from buying a sufficient quantity of our products to meet promptly their current demands.

Very truly yours,

STAYBESTOS MFG. COMPANY,

Philadelphia, Pa. E. B. Knowles, Secretary.

## DELAYS IN ORDERING WILL MEAN DISAPPOINTMENT IN GETTING GOODS

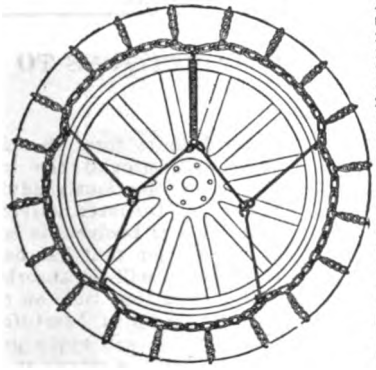
Editor HARDWARE WORLD:

It is our belief that the coming season is going to be the best one in the history of the country. However, we do not believe that it is good policy to load up on any line, but the merchant or jobber who does not have enough stock on hand to supply the created demands is going to be the loser.

We do not believe that prices are going to lower materially and in any event it does not seem as though the price is going to come down except in the gradual way. While the market may break on some one or two items, in the main, through the hardware trade, the steady decline is going to be the rule.

Our advice to both the wholesale and retail trade would be to keep up stock, but do not speculate on the market. We believe that the ones that will do this are going to be the winners during the readjustment. It is our sincere belief that the dealer who delays purchasing in order to obtain lower prices is going to be disappointed in two ways. They are not going to have any reduction in prices and they are going to be out of merchandise. That is going to lose them many sales and much profit.

We advise, keep up stock but do not speculate.



Yours very truly.

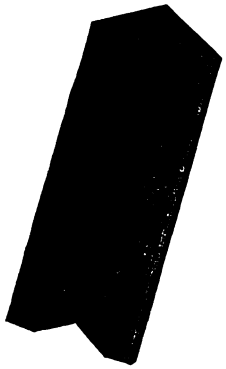
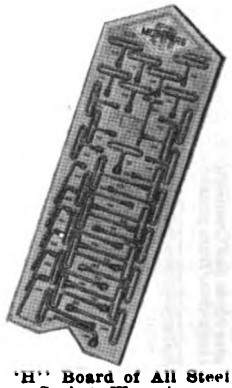
## A Business-Building Line

THE dealer who sells Mossberg Tools not only makes a good profit—he gets a quick turnover on his stock and builds up his trade through satisfied customers.



The completeness of the Mossberg line makes the possibility of a sale greater. There is a wrench or tool for every purpose.

The garage man, the motorist, the expert mechanic, each with his individual requirements, may find the right wrench among your Mossberg stock.



The Mossberg reputation for strength and service helps you to make your sales — it builds your business.

## Homes Offer Wonderful Sales for the

# $1.50 Each CARBONA $1.50 Each
# Fire Extinguisher

Count the number of homes in the immediate vicinity of **your** store.

How many of them are protected against the fire hazard?

How many of them have been willing to pay the former prohibitive price asked for hand chemical fire extinguishers?

Surely you can count the "protected" homes on the fingers of one hand.

All the rest are prospects for the $1.50 Carbona Fire Extinguishers.

Thirty years of steady advertising has made "Carbona" a household word throughout the states. The $1.50 Carbona Fire

Extinguisher is another product of a company whose merchandise has always given satisfaction.

As a further guarantee we offer $1,000 to the maker of any fire extinguisher whose liquid is better than Carbona for putting out fires.

Carbona Fire Extinguishers are packed in cartons containing 6 or 12 extinguishers. Liberal profits.

Write your Jobber for prices **now.**

# Conceiving Compressors and Delivering Drills

THE entire United States is turning its eyes southward very often these days. The new South which is coming so prominently to the fore is characterized by cooperation in industry, by the combining of cities and states in bringing their possibilities to the attention of the entire nation. There is a new spirit of progress and cooperation, of alert achievement, which is becoming thoroughly characteristic. Young men and new blood are taking hold of the country and their energy and enthusiasm is contagious and far-reaching.

**S. D. BLACK**

President Black & Decker Mfg. Co., a genial, far seeing young prophet of the New South. His recent visit to the trade throughout the country made hundreds of friends for him and his company.

**A. G. DECKER**

Vice president and another Maryland man, who joins with Mr. Black in leading a great industry. He also combines mechancial genius with executive ability and keen business sense.

**E. W. PROCTER**

The Black & Decker family and hundreds of buyers everywhere call him Doc. He recently enjoyed his first visit with the Gilbert Sales Company, who have put B. & D. machinery on the map of the West.

Along this line and bringing the new South down to cases, we have been truly interested and highly privileged in becoming more intimately acquainted with the Black & Decker Manufacturing Company of Baltimore, Maryland. This is no new name to the trade. There is not a reader of the HARDWARE WORLD who does not know the B. & D. special machinery line of portable electric drills "with the pistol grip and trigger switch," electric valve grinders, electric air compressors and other portable electric tools for the modern machine shop.

We need hardly speak of the goods. They are known. They have proved their worth. They speak for themselves. Yet when, for instance, a special machinery line comes out of Maryland and into the West it is always interesting to us to know the producers as well as the product. One gains a keener understanding and appreciation of the goods, having known the history of their birth and growth—their home environment.

Some ten years ago, two young Southerners were employees of the same firm of construction engineers in Baltimore. One of them was S. Duncan Black. He had grown up in Baltimore. Strange to say, although not a college graduate nor a college undergraduate, yet he was a college postgraduate. Dating away back to his grandfather's time, mechanical and manufacturing had been in the blood of the Blacks. We may even suggest that the reason Black & Decker tools are portable may be traced back to the fact that S. D. Black's grandfather was a carriage manufacturer.

At any rate, young Black had been early apprenticed to machine shops and the art of fine machinery making. When Professor Henry Rawlins of Johns Hopkins wanted an assistant in his research and experimenting, he reached all the way from Philadelphia to Baltimore and recruited Mr. Black. So it was that young Black had all the advantages of a great educational institution and its investigations and expert knowledge as he was developing into a special machinery engineer.

Al. G. Decker's early experience had not differed greatly. He also was a Southern boy

R. G. AMES
The "Large Scaled" manager of the Pivotal Chicago office.

of the new generation with an active mechanical mind applying himself to the problems of machine design and visualizing the possibilities of the automobile age just dawning. His work in particular had been with type-casting machinery. Whoever is familiar with the printing art and knows type-casting machines will realize that the mind that could evolve this machine would be capable of any mechanical flight.

**A Modest Start With Principles**

Since young Black and young Decker had ingeniously worked out other men's mechanical problems, they agreed to start out for themselves as special machinery makers. Thereby Black & Decker was established. At first their market was local, very naturally. Certain principles, however, were established at the start and it is these principles that have been the rule of their growth.

"Fixed Policies" they call them. They established a standard of quality. They established an esprit de corps among the workers in the plant. Perhaps most important of all, they were interested in the product clear through to the consumer. They were not inventors who let others market their machines. They handled sales themselves and thus made their business their very own.

G. A. BROGAN
Has made Black & Decker advertising perhaps pre-eminent among accessory manufacturers.

On these strong roots the little plant branched out and steadily grew. Perhaps it was coincidence that they were growing just as the automobile industry, particularly the accessory industry, was growing. At any rate, it is a fact that thousands of machine shops coming into being had to be equipped. Black & Decker saw their opportunity for national scope, to meet a national demand. In these ten years, therefore, the two young proprietors of a machine shop in Maryland have become the two comparatively young captains of a national industry.

**Brilliant New Blood Brought In**

When organizations develop as rapidly as this, new blood must, of course, be constantly inculcated. We can not feel that any justice has been done to "Black & Decker" without some mention of such other leaders as Sales Manager R. W. Proctor. Every member of the Black & Decker family calls him "Doc." That is, of course, typical, for it is all one big family.

Doc. Proctor is another Southerner, one of those blue-blooded Virginians, we believe. He was an undergraduate student at Randolph-Macon College and received his post-graduate degree at Cornell, in mechanical engineering. Indicative of the sort of mind behind Doc. Proctor's pleasant smile is the fact that he completed a four-year college course in three years.

Then he went out to Cleveland with the National Lamp Works in the miniature lamp division. While office manager and superintendent there, in his spare time he devised a machine for blowing bulbs that increased the production from five thousand to fifty thousand a month. Just one thousand per cent gain! That's the sort of thing Doc. Procter has been doing ever since.

Very naturally he was attracted by the earnest, energetic spirit of Black & Decker. Three years ago, he went back to his home haunts on Chesapeake Bay as Sales Manager. His brilliant experience as an engineer has made him all the more brilliant as a Sales

New factory at Towson Heights, suburb of Baltimore, where the Company is putting into practice the latest methods of production and the most advanced ideas in keeping employes happy and satisfied.

Manager of special electrical machinery. They rather proudly accuse him of "putting everything on curves," but at the same time he puts Black & Decker machines straight over and straight across in a way that is worthy of the product and of the purchasers.

**Cooperation With the Distributors**

It is the Black & Decker sales policy to distribute through the jobber absolutely, and yet the Company has ten branch offices from coast to coast. Thus the Company's own representatives can work with the jobbers and their salesmen, can know the purchaser, can supply service and can follow the demands of the trade closely. Often sales are made by the Company's representatives, but in every case for the jobbers. A few months ago in a special sales campaign in one month, $200,000 worth of equipment was placed directly with the consumer by the Company's representatives, yet every sale was credited to the jobber.

**Family Spirit in Every Office**

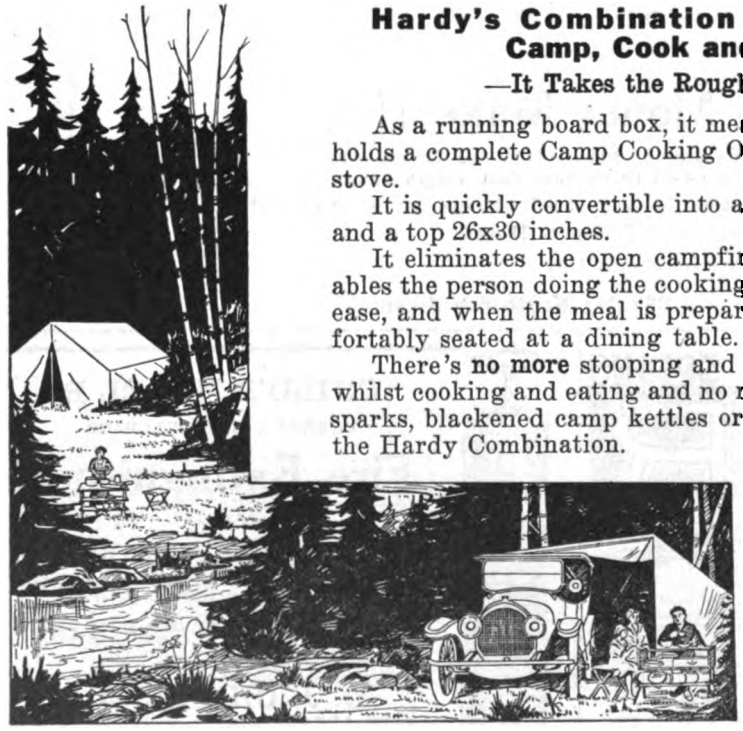
We can not leave this subject of branch offices without recalling vividly to mind the ample, pleasant personality of R. G. Ames, branch manager at Chicago, and thus a commander at a pivot point. From Mr. Ames as a center men go out in every direction with the Black & Decker spirit to make the machinist's lot a more happy one. Mr. Ames is a big man in more senses than simply spirit. From time to time we have in our columns introduced other Black & Decker branch managers to our readers.

**Gilbert Sales Co. Handles West**

The trade west of Denver knows B. & D. through the Company's distinguished far western representatives, W. H. Gilbert, both Senior and Junior, and the Gilbert Sales Company, with their offices at Los Angeles, San Francisco and Seattle. They command the far western front and the nature of their representation is thoroughly typical of the Company and of the products.

## STEADY INCREASE IN EASTERN OREGON

Editor HARDWARE WORLD:



At present in Eastern Oregon crop indications, together with the lumber industry, which is holding up, leads us to believe that we will be able to continue with the same increase for the rest of 1920 that we have enjoyed during the first seven months.

The wool and stock market has caused a great many of the dealers in all parts of Oregon no little trouble, due to the fact that collections have been slow, but we feel that all of the hardware dealers have done everything possible to carry the wool and stock men and from indications at the present time there will soon be some relief.

# "WHAT POLICY SHOULD MERCHANTS PURSUE?"

## DEAN OF HARDWARE JOBBERS SPEAKS OUT OF AN ABUNDANT EXPERIENCE

Editor HARDWARE WORLD:

Considering the experience of the last four years, we hesit.te to express our opinions, fearing that our retail friends might consider them superfluous if not obtrusive. However, a few words on this subject may not be inappropriate and may be of benefit to some.

During the past four years the wholesalers have experienced the utmost difficulty in obtaining goods from the manufacturers with any degree of promptness, having to anticipate their requirements by placing orders from three or four months to a year ahead of their expected arrival and in far larger quantities than usual, hoping thereby to insure adequate supplies for the necessities of the retailers as they were required, and as a rule they have been successful in maintaining a full stock. This strenuous condition made it practically necessary for retailers to rely almost entirely upon wholesalers for their supplies, as they could not very well place orders with manufacturers, and this condition naturally made them more frequent buyers than formerly and their purchases generally of a smaller amount. Consequently as a rule they have experienced the benefit of careful buying and quick turnover, and certainly it must have convinced them that such purchases and the promptness in obtaining their supplies, keeping their stock fresher and in good order, turning their capital more quickly, has been more profitable and given less anxiety than buying in needlessly large quantities. the tying up of capital, the loss of interest and an unwieldy and slow moving stock.

Certainly there has been no time in our experience when retailers as a rule have made more money, established their business on a more reasonable, sounder and profitable basis, than during these past few years, and we believe the continuation of this method will produce the same results if continued in the future.

The function of a wholesaler is to carry a stock (if possibly obtainable) adequate at all times to the demand of the retailer and upon which he can rely. If further proof is necessary beyond the statement that the retailers can make more money by purchasing their general line of hardware (there will be of course some exceptions) from the wholesalers in small and moderate quantities as their requirements demand, and that this method will be more profitable for them than any other policy, the experience of the past few years ought to be sufficient evidence of the fact, as such purchases should enable them to turn their capital frequently, at least four times a year, and which they cannot do if they attempt to compete with the wholesalers by purchasing from manufacturers.

In line with this policy of careful purchasing from the wholesaler, it is more evident each year that the retailers should reduce their possible losses by selling for cash and discounting their own purchases at the general terms given on hardware, which will be a saving to them at the rate of not less than 14 per cent per annum instead of tying up their capital by giving long credits and wasting time and money in collection or attempted collection. The prevailing opinion is that farmers, in this state at least, are as a rule as prosperous as any other class of people and are able to pay cash; they demand cash for their products and should pay cash for what they buy. The retailer should not be required to finance purchasers by selling on long time, such financing is the province of the banker.

Speaking generally, present prices are very high, some extravagantly high; a decline must come sooner or later, but when it will commence is beyond our knowledge, the safest way is to purchase prudently as requirements demand. Yours very truly,

DUNHAM, CARRIGAN & HAYDEN CO.,
San Francisco. Brace Hayden, Pres.

## LIVE MERCHANTS AVOID DEAD STOCK AND DEAD CREDITS

Editor HARDWARE WORLD:

The doctrine of quick turn overs has been preached so long and so often that it is a pretty hard task to find anything new to say on this subject.

All of your readers must have, at one time or another, seen the summary of the Mercantile Agencies' list of failures with the reasons given, such as incompetence, lack of capital, lack of experience, unwise credits, etc. I may not have their exact terms but they have quite a list of them. Did it ever occur to you that, in each of this list of causes, one of two factors must surely occur and very often both?

These two factors are dead credits and dead stocks. In nearly every failure one of these two things is true, either the merchant has bought unwisely or he has trusted unwisely.

### Avoiding Dead Stock

Strange as it may seem, not very many merchants have any systematic way of checking themselves in the matter of dead stock. Most stores which have been in business for more than a couple years have quite an accumulation of stock which has not moved as it should, but one merchant of my acquaintance had a system which almost entirely prevented this accumulation.

Every year, when he took stock, every box or package was marked with a colored pencil. The next year every box which had this pencil mark was thrown out of stock on a separate table and was then sold at once for what it would bring without regard to cost. This merchant was decidedly successful and, while there were many reasons for this success, I have always felt that this avoidance of dead stock was an important factor in his success. His scheme might not fit any other man but the principal thing is to have some way to check up at least once a year all the goods which have not been moving and then move them, get some money out of them and put that money where it will move.

With reference to collections the writer does not profess to know much about this end of the business, but I do know that it is vital. There have been many plans, some of them good, worked out for the collection of slow accounts but no plan, of course, will work in all cases.

Personally, I believe that as far as the hardware trade is concerned, a very large proportion of the slow and bad accounts is due to the fact that the merchant is afraid to have a frank talk with his debtor, in which he can show him the necessity of getting the money, if the debtor has it. If the debtor has the money and won't pay, the merchant should not be afraid to make an example of him. He will find it makes it easier to collect other slow accounts.

Whatever he does when he figures up his business at the end of the year to find out whether he has made or lost money, he should throw out of consideration every account that is not absolutely "gilt edged." If he gets the money it means that much more profit in the next year. If he doesn't get the money he has fooled himself. We all like to fool ourselves about how well we are doing and an inflated valuation of dead stock and an optimistic view of the old accounts on our ledger are two of the easiest ways there are to fool ourselves into the bankruptcy courts.

Very sincerely yours,

FAILING-McCALMAN CO.
Portland, Ore. E. J. Failing, Secretary.

# BE CONSERVATIVE, BUT NOT PESSIMISTIC

## SAFE TO BUY WHEN DEMAND EXCEEDS SUPPLY

Editor HARDWARE WORLD:

It would seem as though the trend in prices of iron, steel and collateral articles will continue upward instead of downward.

The demand still seems to exceed supply and when the absolute need of the railroads is satisfied the strain for production will increase. If, however, there are some individual lines in hardware where these conditions do not prevail, then the retail purchasing should be cautious. In general, however, our opinion is that requirements will have to be anticipated in most lines for some time to come.

Yours very truly,

ENTERPRISE MFG. CO. OF PA.,

Philadelphia, Pa. C. W. Asbury.

## NO OPPORTUNITY FOR DECLINE IN PRICES

Editor HARDWARE WORLD:

We are of the opinion that orders should be placed without delay for the trade requirements of the next six months. We see no opportunity for a decline in prices account of the prices obtaining for iron and steel, and certainly deliveries from the mills to the factories, which are seriously impeded and in many cases held up altogether account of lack of transportation facilities, indicate that there will be very great delay on the part of the factories in shipping the finished product.

Very truly yours,

HUNT, HELM, FERRIS & CO.,

Howard, Ill. B. B. Bell, Sec'y-Treas.

## ELECTRICAL MERCHANDISE MAY GO HIGHER

Editor HARDWARE WORLD:

As far as standard electrical merchandise is concerned, we see no possibility of prices being lower. As a matter of fact, the tendency is upward. Most factories are behind on their orders, and we believe it would be wise for jobbers to anticipate their fall requirements by placing their orders at an early date.

Yours truly,

MANHATTAN ELECTRICAL SUP. CO., Inc.,

New York. E. Whitmore, Sec.

## NOT PESSIMISTIC—DON'T BUY RECKLESSLY

Editor HARDWARE WORLD:

We are not nearly so pessimistically inclined as many observers, but at the same time we are sure that this is no time for reckless buying. It is a period when great discrimination should be shown by both wholesalers and retailers and if they are wise they will apply the "Babcock Test" to all of their merchandise. Goods that are staple necessities or that carry with them an advertising campaign that is producing good results, should be retained and all of the items that do not produce quick turnover should be knifed.

"Buy little and be safe" is an old policy that has stood the test of time and should be applied now. Any merchant who recklessly loads up with goods is making a mistake, but no greater mistake than the merchant who cuts off absolutely all buying orders.

Very truly yours,

ROBT. H. INGERSOLL & BRO.,

New York. P. S. Salisbury, Mgr. Sales.

## SUCCESS MEASURED BY ABILITY TO TURN STOCKS OFTEN

Editor HARDWARE WORLD:

We believe that either wholesale or retail merchants fully appreciate that their success is measured by their ability to turn their stocks more frequently. The country is suffering from a lack of capital and a strain of credit, and we believe the management of the Federal Reserve Banks have been very far sightod in pursuing their policy of credit restrictions.

Merchants can co-operate for their own as well as their country's good by using every effort to make the dollar do more work than ever has been done before. There has been so much difficulty in getting seasonable merchandise that many merchants have not given thought and consideration to the number of times they are turning over their stock, but are assuming that everything is hard to get, and are carrying larger stocks in some cases than is really necessary. There should be enough goods to go round if we had proper distribution, and everyone was endeavoring to see how rapidly they could turn their money.

**Worth Emphasizing**

We think the fault of many merchants has been in not anticipating their requirements far enough ahead, and not giving sufficient attention to their collections. They have been too slow to buy and too slow to collect. We find that many merchants now are going through their stock and inventorying items which they would not replace if they were sold, obsolete goods, drop stock and broken lines, and are cleaning them up while they have a fine market and whilst there is a shortage of goods. The more attention that can be directed towards rapid turnover, the sounder and more profitable the business will be. It is the old story of the Nimble Sixpence. We believe you are doing the trade a great benefit by emphasizing this fact at this time.

Yours very truly,

MORLEY BROTHERS,

Saginaw, Mich. R. C. Morley, Pres.

## ORDERING FROM THREE TO SIX MONTHS AHEAD

Editor HARDWARE WORLD:

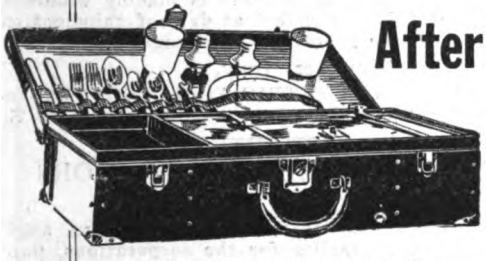
We are ordering ahead on our goods from three to six months, and we now have in our files orders that are over a year old.

We do not like to do business this way, but it seems necessary to place orders considerably ahead.

We do not know what to expect regarding prices, but we do not see any opportunity for lower prices at the present time, and we believe that conditions are about as stated recently by Fayette R. Plumb, that the merchant takes a good deal more chance of loss by not having stock than he would on account of the lowering of prices.

Undoubtedly, the labor wages are to stay up for some time to come, possibly one to five years, and if the prices of labor are kept up that will naturally keep up other prices. There are goods on the market which are being sold at from 300 per cent to 600 and 800 per cent above normal prices, and it seems to us that such goods will very naturally decline, but the hardware, as a rule, does not seem to be over 100 per cent above normal prices and we do not think there will be very much of a decline on that for some years to come.

This is about as we size up the situation at the present time. We do not think the time for lowering prices is as near today as we thought it was the 1st of January, 1920. Yours very truly,



BARRETT HARDWARE CO.,

Joilet, Ill. E. M. Moore, Vice Pres.

# THESE LETTERS SHOULD HELP YOU DECIDE YOUR POLICY

## FAYETTE R. PLUMB'S ADVICE

Just a little in advance of our sounding of the trade as to the policy for merchants to pursue in the buying and the conduct of their business during the coming year, Fayette R. Plumb, president of Fayette R. Plumb, Inc., contributes an article along the same lines.

Answering the question, "How Shall I Buy?" we quote this extract from Mr. Plumb's article, as being representative of his thought and advice to the merchants.

When a retailer finds that his stock of some particular line is coming in faster than it is going out, he will be wise to analyze the situation to see if the same condition applies to other retailers; whether sales of this line are growing less in volume and whether it is becoming easier to get a supply promptly. Production is surely increasing. Each line should be watched to see if the demand is beginning to be satisfied. When this time comes, the interesting question is, whether the general tendency toward lower prices, coupled with smaller orders from retailers to the jobbers and from the jobbers to the manufacturers, will lead to forced sales on smaller margins of profit or even below cost, in spite of continued advances in the cost of manufacture. This probably will be the result in some cases.

With such a prospect before him, the careful merchant will not be persuaded to buy what he does not want. He must bear in mind that the important question is the relation between supply and demand for each particular line of hardware in his stock. He should not be misled by the clamor for lower prices into believing that any line is unsalable on account of the price if sales are actually keeping up. Any gain to be derived from bargain prices will be negligible, compared to the advantage of keeping an adequate supply of salable items and no oversupply of the lines on which the sale is falling off.

We believe that the best policy for the next six months is to be cautious but alert; to keep one eye on the demand and the other on the supply; to realize that to serve our customers we must keep an adequate supply of the standard essential items, but that to save ourselves we must check any tendency toward buying more than we can sell, and that to pursue this policy correctly we must study each line separately, according to both the demand and the supply.

## BUY STAPLES WHEN YOU CAN

Editor HARDWARE WORLD:

As long as demand is ahead of supply; getting the goods is the all important feature, as the price will take care of itself; that is, you need not worry about your profit; profit will bear a good margin and many times more than could be realized on a turnover under conditions when merchandise is plentiful and competition is rife.

Watch the market and when you have an opportunity to buy staples buy them and buy them liberally, because later on when you need them badly the chances are you will not be able to get them and thereby lose the profit you would have if you had goods and had been a little more foresighted. At present one can secure on the local market hemp rope, grindstones, quality axe handles, linseed oil, and a very limited stock of flat galvanized sheets and corrugated roof sheets. A short time ago shovels and axes were plentiful, today they are scarce. Buy when the goods are here, ask the salesman calling on you for information.

MARSHALL-WELLS HDWE. CO.,
Spokane, Wash. W. R. Reinhardt.

## OUTLOOK FOR ELECTRICAL APPLIANCES VERY BRIGHT

Editor HARDWARE WORLD:

We have been encouraging our trade, both dealer and jobber, to place their future delivery requirements with us for this fall, and even for the spring of 1921. But we ask them to do this conservatively, for their own sakes, as well as for ours. We do not want them to overbuy or place so-called "insurance" orders.

We look for a steady demand during the fall and holiday season, and while deliveries are easing up somewhat, we do not expect them to be easy. One of the most serious considerations is the traffic condition, which continues to embarrass shipments to and from the manufacturer, and which in the fall may become much worse.

It is evident that the trend is turning somewhat downward on basic commodities; that the public is buying on a more conservative basis, and that there has been a reaction in silk, woolen and leather goods trade.

The outlook for electrically heated appliances, however, especially on account of their convenience and labor-saving characteristics, is very bright. This field is only in the beginning of its development, and its natural expansion will in our judgment more than offset any general business reaction which can possibly be foreseen in the next year. We do not look for any lower prices this year; inasmuch, however, as all the electric heating appliance trade is placing orders for shipments at prices in effect at date of shipment, the purchaser gets the benefit of any reduction.

Yours very truly,
EDISON ELECTRIC APPLIANCE CO., Inc.,
Chicago, Ill. H. J. Mauger, Sec.

## STEEL AND LABOR BIG FACTORS

Editor HARDWARE WORLD:

Our business consists of heavy steel, bars, angles, bolts, rivets and supplies for the corporations, public utilities, railroads and industries, and therefore goes to the large consumer; but the same idea which regulates the purchase of these commodities for this type of buyer concerns also the interest of the retailer. Of course, the basis of the hardware business is steel, to which we look as the barometer of our trade.

When you consider that about 75 per cent of the cost of manufacturing any article, including steel, is labor and that the country is suffering for houses and buildings of all types, that the production in the steel line has in no way caught up with the demand, we cannot possibly see the breaking of the market in the near future in the steel business, and our advice is that merchants should keep their stock up to normal. We do not believe it time for speculation or for an overstock, but to pursue a policy that would allow stock to dwindle in our opinion would be a folly.

"Getting goods" is particularly made more difficult by the fact that the railroads have been suffering from lack of equipment during the last four years and we hear of thousands of tons of finished products held up in the yards of the steel mills in the Pittsburg and Youngstown districts which are unable to move because of lack of cars. Local shipments and freight of all kinds is very slow. We have had a number of shipments made to us from Atlantic seaboard points in February arriving in July, which is indicative.

We believe, however, that these conditions will iron themselves out within a year and we can look for normal affairs during 1921.

Yours very truly,
W. T. McFIE SUPPLY CO.,
Los Angeles, Cal. Haynard McFie.

# Enthusiasm That Diamond Tires Evoke

## JUDGE from the following letter from Mr. Lundblade, of Eureka, California:

"My real success began at the time I took on the Diamond line. In a few short weeks I was able to point to a line-up of cars and say with great satisfaction, 'Count the Diamonds.' And those who counted soon realized the growing popularity, and fell quickly into line.

"The reasons for the popularity were not hard to find. First, there was the inherent quality of the tires. The fact that they wore well—that they looked well—that they served the owner for a period usually far beyond the adjustment basis, with a minimum of trouble. Secondly, there was the character of the men behind the goods. The faith they had in the tires they were making. The willingness they evidenced to make good wherever and whenever a fault appeared.

"So my business has grown. Today Diamonds are to be found on more than half the cars in my community. I am making money, building up daily a larger and better business, because I am selling satisfaction—a satisfaction that is made out of quality and confidence.

"Three years ago my capital was very small. Today I am located in my own building which was just recently completed at a cost to me of $40,000."

# YOU MUST HAVE THE GOODS IN ORDER TO SELL THEM

## URGE PLACE SPRING ORDERS EARLY

Editor HARDWARE WORLD:

In view of the fact that it is always easier to place orders early than to ship early, I believe that as a general proposition it is more advisable for the trade to place spring orders early by estimating their requirements in advance.

It gives the manufacturer an opportunity to regulate his production, which means an effect in savings, the benefit of which is passed on to the retailer. Allowance is always made for a certain percentage of cancellations.

It is the custom of the tire trade to issue a price protection on merchandise on hand bought within sixty or ninety days from date of purchase, so the dealer is well protected.

In fact, I do not see how the tire business could be conducted efficiently and successfully without the cooperation of the dealer in estimating his requirements and placing his orders in advance.

Very truly yours.

EHMAN TIRE & RUBBER CO.,

Chicago. H. Jackson, Sales Manager.

## A NUMBER OF GOOD SUGGESTIONS

Editor HARDWARE WORLD:

We believe that it is very important for the retail merchants to keep up their stocks to a reasonable standard. Buying their goods from the nearest jobbing center and buying them in reasonably small quantities and turn them out just as fast as it is possible, and to watch their stock very carefully, and if they find any seasonable goods that is not active make an effort to distribute it at the season when they should be distributed and not carry them over until the next season. And if they should have any unsalable goods on their shelves, get it down, clean it up and sell it.

It is very imperative on the part of the merchants to keep their credit to a high standard, as money matters are getting closer and closer and it is very important for him to make collections and insist upon his customers paying him promptly for their merchandise. The thing that is now necessary is for each and every one of us to go to work with the full determination to put in good time and make a special effort to produce something in some form and try to get everyone else to do likewise. That will soon adjust the conditions in this country s they will be thoroughly satisfactory to us all.

Yours truly,

VAN DEREN HDWE. CO.,

Lexington, Ky. J. F. Van Deren, Pres.

## NO DECREASE IN THEIR OWN LINE

Editor HARDWARE WORLD:

It is our opinion that the trend of the market is somewhat slower, but we feel that it will still be quite some time before there is any material change.

We would not, therefore, advise delaying the placing of orders as covering actual requirements, although we believe a conservative policy to be in order.

As far as our own line is concerned, consisting of Acid Proof Aprons, Collapsible Steel Stools, Collapsible Buckets, etc., we do not anticipate any decrease in our prices before the first of the year, and possibly not for quite some time thereafter.

Yours truly,

THE DEFIANCE WELDING CO.,

Defiance, Ohio. F. A. Bokop, Gen'l Mgr.

## A SOUND, CALM OUTLOOK AND POLICY

Editor HARDWARE WORLD:

As we view the situation from our close observation of market conditions, demands on trade, ability of the manufacturers to supply raw materials, and from every angle that it is possible for us to see it, we cannot see where there is any occasion for any of us to lose faith in the future. While it is possible that there will be a few showers, we hardly look for heavy rain; and while it may be well to look into the locker to make sure that you are the possessor of an umbrella and a raincoat, can see no particular reason for putting them on.

It is true that prices on some merchandise are going to be lower. It is also a certainty that other lines of merchandise are going to be not only higher-priced, but scarcer than ever. With strikes in the principal steel and iron industries throughout the East, freight rates advanced, adding another three billion dollars to the cost of living of Mr. Consumer, we cannot see where anyone who works for a living can possibly get along on less than they are being paid today and the chances are a great many of them will demand and receive still further advances.

In our opinion, politics have had but very little to do with conditions prevailing during the past several months and now that nominations have been made, each party knows where the other stands, and we do not think that politics will interfere to any extent with conditions affecting merchants or merchandise throughout the country.

We have been warned that merchandise was going to be hard to get, that railroads would be congested, and that in order to be in position to take care of our trade it will be necessary for us to anticipate our requirements as far ahead as possible. It is natural that we have taken the advice of the big manufacturers as we have found in the past that it was absolutely reliable, and that to disregard it only meant disaster.

Demand for merchandise in all lines has been tremendous. Naturally our orders with the manufacturers have been heavy. Knowing that it was more than likely that our orders would be cut down and only partial shipments made applying to each of them, we have specified even beyond our possible requirements.

We do not feel at all alarmed over this condition but on the other hand are patting ourselves on the back because we feel that we are going to be in position to take care of the coming fall and winter trade even better than it has been possible before. We are not buying today in large quantities but are being very careful to see that our stock on any common item of merchandise, does not run too low.

We feel that the merchant who looks carefully to the selection of his stock, makes a careful survey of the possible requirements of the trade in his territory, places himself in position to cater to that trade in a manner that will give them satisfactory merchandise at prices consistent with market conditions, is bound to win out.

LICHTENBERGER FERGUSON CO.,

Los Angeles. W. G. Gordon, Sales Manager.

---

A feature window display by the Le Clerc Hardware Company of Hoquiam, Washington, recently, showed a road through the woods with a stream of water, in which were swimming live fish. Rustic signboards along the way direct tourists to the Le Clerc Hardware Store. The window naturally attracted attention and those who looked in are reported to have taken the hint.

# THE COURAGE OF CONVICTION

*The conviction of the pioneer that he was a match for at least five Indians resulted in a courage that swept all before it on the route overland.*

There is not one "unique" construction method or deceiving special process used in the making of Overland tires. There are no radically different "features" for tire buyers to argue about with distributors and dealers.

The Overland Tire & Rubber Company is convinced that aggressive distributors and dealers do not care to pioneer with an unusual tire or an unusual sales and advertising policy. Both Overland tires and Overland policy are standard.

If you are interested in tires and tubes that follow the line of least sales resistance, today is none too soon to write or wire for further particulars.

## CAPTAIN J. B. LANGDON SUCCEEDS ANDREW CARRIGAN AS VICE PRESIDENT AND GENERAL MANAGER

Of interest to the trade generally and especially on the Pacific Coast is the recent announcement that Andrew Carrigan, vice president and general manager of Dunham, Carrigan & Hayden Company, San Francisco, has resigned his position and has severed his connection with the institution with which his name has been for so long connected.

Mr. Carrigan feels that after a service of some thirty-five or forty years in the hardware business, he is entitled to a well earned rest, and he has disposed of his interests in the institution that he may fulfill his desire.

It is hard to conceive that a man as active as Andrew Carrigan should permanently retire from business, and we should not be surprised to hear of his being drafted back into the hardware service after a period of rest and relaxation.

Captain J. B. Langdon, who has been vice president and superintendent, now assumes the additional duties and title of general manager. Captain Langdon has been identified with Dunham, Carrigan & Hayden Company for the past eight years or more, and has a thorough understanding of the management of the business in all its details. No institution in the West stands higher with the trade or enjoys the prestige and confidence of the trade to a greater extent than Dunham, Carrigan & Hayden.

Mr. Brace Hayden, long known as the dean of the hardware trade, will continue as president.

---

## CRAZY TIMES

Strike and the world strikes with you, work and you work alone; our souls are ablaze with a bolshevik craze, the wildest that was ever known. Groan and there'll be a chorus, smile and you make no hit; for we've grown long hair and we preach despair and show you a daily fit. Spend and the gang will cheer you, save and you have no friend; for we throw our bucks to birds and ducks and borrow from all who'll lend. Knock and you'll be a frost; for the old sane ways of the prewar days are now from the program lost. Strike and the world strikes with you, work and you work alone; for we'd rather yell and keep raising Hannibal, Mo., than strive for an honest bone. Rant and you are a leader, toil and you are a nut; 'twas a bitter day when we pulled from the old time workday rut. Wait, and there'll be a blowup, watch and you'll see a slump; and the fads and crimes of the crazy times will go to the nation's dump. Walt Mason, in Daily News.

---

"Some people are so methodical that that is all that they ever will be."

## DELAYING ORDERS WILL NOT REDUCE PRICES ON STROPS

Editor HARDWARE WORLD:

The acquaintance of the writer with the leather business extends over a period of 33 years, 17 of which were spent in the manufacture of razor strops, and the opinion herein submitted must be from the standpoint of an allied industry rather than that of the hardware business.

The following figures are obtained from files, covering the entire business life of our organization, beginning with 1903, and show that grain leather has made a total advance of 400 per cent in price since that date, and during the past three years has maintained an average increase of 33 1-3 per cent each year. Shell leather, known to the trade as "butts" and used extensively in the shoe business, was not affected by the upward movement until 1914, and since that time has advanced 580 per cent.

Hardware has advanced 400 per cent in five years: labor, 290 per cent; linen fabric and linen thread, 600 per cent, while chemicals and coloring material in some instances have advanced 1000 per cent in the same period. The slight reduction in recent quotations on raw leather has been offset by the very considerable increase in cost of labor and the various materials used in the tanning process, so that the finished product has not been reduced in price.

We note that tanned leather has not decreased in price at any time during the 17 years covered by our research, and with occasional periods of temporary stability has maintained an annual average increase of 14 per cent; the rise in price of associated products, while accomplished in a shorter period, has been more rapid and equally great.

In our judgment, these conditions will continue for an indefinite period, certainly not less than one year in duration, and any artificial curtailment of demand at this time will serve only to postpone production, and will militate against an early return of normal conditions by adding to the already numerous difficulties of the manufacturer, that of an uncertain market, to be followed in all probability by an avalanche of belated "rush orders."

There does not appear to be any reasonable prospect of obtaining lower prices by such a course, and we consider further advance entirely possible. The policy being followed by our firm, and which we would recommend to the trade, is to purchase all the goods available and to place orders for future delivery at present prices whenever this can be done. The maintenance of production and the continued employment of labor seem to us the only logical methods to stabilize business and to secure a return to more desirable economic conditions.

Very respectfully yours,

ALLEGRETTI MFG. CO.,

Geneva, N. Y. A. L. Allegretti.

---

A colored lady upon returning a pair of silk stockings was asked if they hadn't come up to her expectations. She replied, "No, but they wuz long enuff."

---

You will lose some good customers this year through unavoidable conditions—death, removal, etc. What are you doing to secure other good customers in their places?

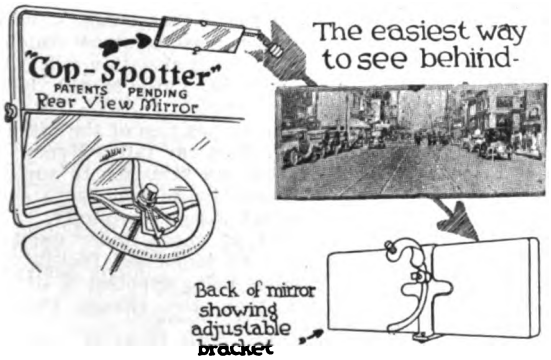
## CALIFORNIA CONVENTION AT YOSEMITE

Members of the Northern Division of the California Retail Hardware & Implement Association will combine the beauties of the Sierra Nevada Mountains with a consideration of hardware problems and trade prospects for the year at the semi-annual convention in the Yosemite Valley, September 7.

The date selected is particularly appropriate, since it comes during a week when there are two other holidays, Labor Day, September 6, and Admission Day, universally celebrated in California, September 9, will make the week broken so that the members are planning on the week's trip to the Yosemite Valley at which time the Convention will be held. Headquarters will be maintained at Yosemite Lodge.



Secretary Roy Smith has made all arrangements for a combined outing and business meeting, and President G. A. Gutman will be in the chair for the first time.

## SOUTHERN CALIFORNIA MEETING AT RIVERSIDE

The semi-annual meeting of the Southern Division of the California Retail Hardware & Implement Association will be held September 29 at Riverside, California, and Secretary J. Glenn Marks has the energetic Orange Clipper Club working with him in making the arrangements. The Glenwood Mission Inn has been secured for the day and everything points to a most profitable and pleasant meeting. The hardware manufacturers, jobbers and salesmen have been invited to visit with the merchants that day.

## ELITE COMPANY'S RELIABLE JACKS

The "Reliable" Jacks of the Elite Mfg. Co., of Ashland, Ohio, are described in its June, 1920, catalog. It is the claim of the company that it makes a jack for every purpose, and the catalog proves it.

# "WHAT POLICY SHOULD MERCHANTS PURSUE?"

## FILES WILL BE DIFFICULT TO GET

Editor HARDWARE WORLD:

We can see no reason why the wholesale and retail trade should not be making their purchases on Delta Files at the present low price. Certainly there is nothing that tends to a lowering of the cost of production, and with the present transportation facilities, the shortage of high grade tool steels, it seems self-evident that high grade files will be difficult to get as the year grows older.

Yours truly,

DELTA FILE WORKS,

Philadelphia. J. M. Hottel, Vice Pres.

## ACCESSORIES WILL CONTINUE IN DEMAND

Editor HARDWARE WORLD:

We are expecting a good business from the hardware trade this fall. At the present time buying is hardly sufficient to keep complete lines in stock and at the same time the large number of automobiles now in use will surely make a good market for repair and renewal of parts this fall.

We are not looking for any large decline in our raw material (steel) or in labor. The market prices will probably be steady for several months.

Very truly yours,

THE BREWER-TITCHENER CORPORATION,

Cortland, N. Y. Robert L. Brewer, Sales Mgr.

## PRESENT WITH PRE-WAR PRICES A GOOD GUIDE

Editor HARDWARE WORLD:

The trend of the market for the next six months will depend chiefly upon the commodity. In the field of metal products we do not look for any material change. On many items the tendency of prices may be upward.

In general the trade will not gain by delay in the placing of their orders. There are some exceptions, because there are some goods that have been unduly inflated and these are liable to drop in price.

In analyzing the market the tradesman should carefully compare the present prices of each commodity with pre-war prices. As a general rule, where the cost of a commodity has not increased over 50 per cent in the past four years there cannot be a decrease and there is every likelihood of an increase.

In the face of an increase of over 100 per cent in the cost of labor, and an equal or greater increase in the cost of raw materials, neither of which show any downward tendency, a decrease could hardly be possible in the cost of any product which has increased only 50 per cent or less during this period.

In the case of commodities where the cost has increased from 75 per cent to 150 per cent, or even more, as it has in some instances, it will pay to buy cautiously. Such increases indicate evidence of profiteering or inflated values, and wherever such conditions exist prices are likely to drop.

It will be a pretty safe plan to let yourself be guided largely by the ratio between present prices and the prices of four years ago.

Yours very truly,

THE COLEMAN LAMP CO.,

Wichita, Kan. H. K. Cassidy. Asst. Sales Mgr.

F. G. Hodges, Harbor City, Cal., has opened a branch store in Lomita, one and one-half miles from Harbor City.

## MANUFACTURER, JOBBER AND RETAILER ARE PARTNERS

Editor HARDWARE WORLD:

There is one thing that should be borne in mind by the hardware trade generally, and that is manufacturer, jobber and retailer are partners, and whatever affects one affects the other. Their work is so inter-related, you might say they are so interdependent upon each other, that the success or failure of one affects the success o failure of the others.

We have been living in abnormal times the past two years.

Two years ago the trade generally thought there would be a recession of prices, and in some lines there was a drop. Then it was that we suddenly discovered that our production was not keeping up with the demand. If labor had fulfilled its share of work, if they had not restricted the output, if there had been no slacking on the job, if production had not been cut down, there is no question but what we would have gotten back to what we might term "normal times," not "pre-war times," but far more normal conditions than we have at present.

WESTERN MANUFACTURER.

## QUESTION OF DELIVERY IMPORTANT

Editor HARDWARE WORLD:

It is the writer's opinion that the trend of the market will be steady to slightly upward. My opinion of course is based on commodities that enter into the manufacture of our own line. We have had no relief in the price of labor, in some items we are well stocked at present prices, on others, particularly hardware, we are working hand to mouth, at times delaying our production.

There is nothing in the above that would indicate lower prices in the near future, just what bearing the presidential campaign and the coal situation will have on the market, seems uncertain, however the latter seems to be far more serious.

The above indicates a strong position of the market. We do not urge heavy purchases for fall delivery, on the other hand, we instructed our salesmen to suggest to our customers that they anticipate their needs sixty to ninety days in advance and order accordingly.

The question of delivery of goods under existing transportation conditions is an important factor, and I believe that the question of being supplied is of materially more importance than any change that is likely to take place in the price.

Yours very truly,

THE PILLIOD LUMBER COMPANY,

Swanton, O. T. J. Pilliod, Treas.

Chas. W. Nelson is the proprietor of a new business at McCabe, Montana, and will carry a general hardware and implement line, specializing on automobile accessories.

The U. S. Automotive Supply Co. has been formed in Seattle, Washington to handle eighteen separate accessory articles throughout the state of Washington. E. P. Nudleman and J. P. Cronin are the heads of the company and their offices are at 921 East Pike St.

The Common Sense Auto Accessory Co., with headquarters in Seattle, Washington, is manufacturing a Front Radius Rod for Ford cars at Everett, Washington. They plan later to manufacture the radius rods in the East also. H. R. Freeman is president of the concern, with G. F. Beardsley as vice president and Myrlin Haynes, secretary.

# POLICY OF A SUCCESSFUL RETAIL MERCHANT

## A RETAILER'S THOUGHTFUL ANALYSIS

Editor HARDWARE WORLD:

You ask me "what I think should be the policy of retail merchants in placing their orders and specifications for the coming season."

Waiting is a poor policy for any merchant to adopt. Waiting for a decline in prices before buying is as bad as buying goods and waiting for advances before selling. Either one is speculation, and not good business. The "turn-over" is what counts in successful merchandising.

One of my men said to me last week: "If we buy 100 kegs of nails today for $400.00, and we sell them for $500.00, and they advance and we have to pay $500.00 for the next 100 kegs, we haven't made anything." I said: "That is not true. We made $100.00, and we make another $100.00 on the 100 kegs we pay $500.00 for." He said, "Why not hold the first 100 kegs until they go up and make the $200.00 on them? In that way we only handle 100 kegs and make just as much profit as we would to handle 200 kegs."

I wish my competitors would look at it that way. I would be supplying their customers with nails while they were holding them for an advance, and while they are waiting, their overhead expenses are running the same as mine. The only difference is that I am serving the trade and they are not. One is merchandising—the other is speculating.

I am trying to keep my assortments up the same today as I did when prices were low. Why not? It is true I am more conservative now than before the war, but I buy and sell on the market all the time. I anticipate my wants and place orders in advance the same now as I have in the past on all implements and such hardware as I must have to insure prompt delivery. I prefer and do buy, of course, as I need the goods as for as possible.

I am more cautious now than when goods were cheap, but that is all. I can't do business unless I have the goods to sell, and if they go down on me, they will go down on my competitor the same, and we will be as slow as possible in following the decline, and maybe unload before losing much. No merchant can make much profit on a continuously declining market, but at that, you must keep your stock up or go out of business. If we have been good merchants the last two or three years, we can stand a little loss and not break us, but, if we have been scared all the time during the high prices and haven't kept up our stock, we haven't made very much.

Fluctuation of prices rarely ever makes or breaks a good merchant. It is the plunger that usually goes broke or gets rich quick on a fluctuating market, and more often he goes broke. If you keep on selling, you must keep on buying. I know men who have money and are fairly good business men who have remained out of business for the last five years through fear. When goods were cheap, they argued that they were so cheap they couldn't make anything and that they would have to handle too many goods for a little profit, and when they got high, they said they were too high, and would wait until they got cheaper. As a result, they are still waiting, and, upon the hypothesis they will continue to wait the balance of their lives. The same thing will apply to the man in business. If he waits for goods to go down he loses, and if he waits for them to go up, he loses. Suppose we adopted the waiting process on clothing for our bodies and the food on our tables. I know men who have been figuring on building a home for the past twenty years and they are still waiting, and when Gabriel blows his horn, they will be waiting still. There is absolutely nothing gained in waiting, but all in doing. Yours very truly,

Hot Springs, Ark. HAMP WILLIAMS.

## PAINT MATERIALS SCARCE FOR SIX MONTHS

Editor HARDWARE WORLD:

So far as paint materials are concerned—we do not anticipate a lower price, but we do anticipate a shortage in supplies. At the present time, there is a decided shortage in the market on silica and whiting dry colors, etc.

The paint manufacturers are competing as best possible, to buy supplies. This naturally will make a shortage in the market for the dealers, when the paint manufacturers are so short themselves, and we would urge all jobbers and dealers in the hardware line who handle paint material to get their orders in and anticipate their wants as far ahead as possible.

Another matter that is seriously inconveniencing that trade at the present time is the coal shortage, which is shutting down a great many plants, also the railroad situation, as the railroads are trying to handle more freight than they really should try to handle, with present equipment. It is taking shipments four or five times as long as normally to reach destination—after these shipments have gone forward. The uncertainty of raw materials at the present time is such that dealers will make no mistake, at present prices, to put in what stock may be wanted for the next six months. Yours very truly,

TAMMS SILICA COMPANY,

Chicago. T. J. Peterson, Pres.

## PAINT PRICES WILL HOLD THROUGHOUT THE YEAR

Editor HARDWARE WORLD:

As far as the paint business is concerned, we will probably not get lower prices until after the first of the year at least. It is true that linseed oil will be considerably lower later in the fall, but it is always necessary for the paint manufacturer, in order to guard his interest, to carry a large stock of all raw materials, and we feel that this naturally will keep back the decline of prices until after the first of the year.

In varnishes we do not look for any decline whatever, even after the first of the year, for the reason that turpentine and naptha are very high in price, and varnish gums are not only very high, but are very hard to obtain.

We, of course, do not wish to advise anyone in regard to buying, but if we were operating a paint store we would undoubtedly buy cautiously, but at the same time insure sufficient stock to take care of our business up to the first of the year at least, without running short and placing ourselves in a position where we could not handle the trade satisfactorily.

Yours very truly,

THE GLIDDEN COMPANY,

D. J. Tight, Vice Pres. and Gen. Mgr.

## MORE LIKELY INCREASE THAN NOT

Editor HARDWARE WORLD:

It is our belief that prices on the general run of material, such as we use, will hold for some time to come, and we are basing our purchases accordingly. Also we believe that our present selling prices will stand for the balance of the year at least, and the chances are if any change takes place it will be an increase rather than a decrease.

Very truly yours,

O. J. CHILDS COMPANY,

Utica, N. Y. G. H. Litchfield, Asst. Sales Mgr.

## SILVER LINING IN EVERY CLOUD

Editor HARDWARE WORLD:

Up to the first of June our business ran very little under that done in 1919, but since June we have had a very perceptible falling off in trade. A part of this due to local conditions and a part to conditions which, I believe, are affecting this section of the country generally. This particular section suffered during the summer and fall of 1919 a very severe drouth. Very little feed was grown, and practically all of the farmers and stockmen in this section were forced to buy high priced feed to go into low priced hogs and beef cattle. Many of these farmers and stockmen strained their credit in this way.

This section is again suffering from a drouth, having had little rain since June, but conditions are better in this respect than last year. Corn has been cut at least 30 per cent. Wheat is turning out a poor yield per acre, while oats have been fair to good, hay fair to good and apples about 60 per cent of last year's crop. Tomatoes are in excellent condition, and if we have rains within the next we k, will bring in considerable money. The section around Marionville grows considerable fruit, shipping in good seasons about four hundred cars of apples and about 50 cars of strawberries.

The local conditions, together with the tightness of money have hurt business. During the last sixty days I have talked with quite a number of merchants in this section and practically all of them say their business is considerably under that of last year. The agitation in favor of reducing the high cost of living, and the prevailing belief that prices are coming down, have also had a considerable effect.

We do not expect any appreciable decline in hardware in the near future. Hardware jobbers are unable in many instances to supply the most staple articles in their line, and until production is increased we cannot reasonably expect a reduction in prices.

Because of the difficulty in getting goods, the hardware dealer must work harder than ever. Freight conditions have made it necessary to buy closer at home; in many cases paying a higher price to a nearby jobber in order to insure getting the goods and getting them without delay.

It is our belief that conditions this fall will be better. We believe the policy of the hardware dealer should be to carry a good stock; stock will require more careful attention than ever before. Placing orders and specifications for future deliveries should be done as always—conservatively—not overbuying or speculating, but up to requirements.

Yours truly,
U. L. COLEMAN HARDWARE CO.,
Marionville, Mo. Byron R. Coleman.

---

## BUSY ALL SUMMER

Editor HARDWARE WORLD:

Where we are not absolutely guaranteed against decline we are buying scarcely enough to keep our stock as nearly well assorted as we possibly can.

We all know the hardware business is and has been a problem. Buying futures is a gamble against the buyer unless, as we say he is protected. Business has had no let up with us this summer. We are busy.

Yours truly,
PASADENA HARDWARE CO.,
Pasadena. Jos. Welsh, Pres.

# HARDWARE BUYERS ARE CONTINUING ACTIVE

## GOOD PROSPECTS FOR SATISFACTORY BUSINESS

Editor HARDWARE WORLD:

We have never been a believer in speculating on possible advance on cost of merchandise. We do believe, however, that orders should be placed in sufficient quantities to make freight shipments and also avoid daily pick-ups on all lines that are in any way staple.

Shipments by express and parcel post should be avoided as far as possible, as the expense is out of proportion to the value of the goods and the cost of handling, including the passing of invoices, checking material in, etc., on the small shipments amounts to practically the same as it would on a shipment large enough to go by freight. Hence the saving in clerical expense alone and time spent on small shipments amounts to considerably more than any interest on the investment for a stock order.

We do not understand that there is any particular restriction on credit for legitimate business, but merchants doing speculative buying we believe would immediately find their banks unwilling to help finance same. It is a time, however, for close collections. We find a tendency all the way through merchandising from the manufacturer and necessarily through the jobber to insist upon prompter payments.

The manufacturer is very urgent in this and necessarily the jobber must get his money in from his sales to satisfy the manufacturer. Therefore the retail merchant should watch closely their collections so as to keep their credit up with their supplier and this will tend to steady business conditions generally and avoid uneasiness on the part of the trade generally.

Regarding the future outlook for business, we cannot help but feel that there is a good prospect for a satisfactory business for a long time to come. Prices necessarily are going to be higher, as compared with the old levels, but we must recognize that conditions have changed and that the demands of labor and the inefficiency of labor today has brought about a condition that has set a new standard for prices.

Yours very truly,
ELECTRIC APPLIANCE CO.,
C. C. Hillis, Vice Pres. and Treas.

---

A new institution in the Southwest is the J. W. Brown Hardware Co., Muskogee, Oklahoma, incorporated with a capital stock of $30,000.

---

The Hawks Accessory Company at 1930 Westlake avenue, Seattle, Washington, has become one of the main influences in the accessory field in the Northwest. The company carries a complete line of automobile accessories and is also the distributor for Hood tires. Mr. Hawks has been connected with the accessory business for six years. The service department is one of the secrets of the company's growth.

---

One of the pleasantest advantages that the Ernst Hardware Company at Seattle, Washington, enjoys in its new home is in having a place to entertain its sixty employees. Monthly get-togethers or "frolics," as they are called, are held with stunts, dancing and refreshments. The employees have organized a social club to hold these socials.

---

One of our good Idaho friends tells us that the Sweet-Teller Hardware Co., Boise, Idaho, recently had a most attractive window trim in the form of a desert oasis. There was no lack of reality as the real sand and palm tres were there, and in the center a mirror-like spring with a camp set up around it completed the scene.

## HARDWARE TRADE NOT LETTING UP

Editor HARDWARE WORLD:

While there has been a slight letting up of new business for the past thirty days, we find that it applies more to the accessory jobbers than to the hardware jobbers, which no doubt is due to the re-adjustment of the motor car industries.

We have men calling on the dealers and working in conjunction with our jobbers and we find that the hardware field in general is not letting up in their buying in any way and we feel confident that the scare will be shortlived and inside of thirty days buying will be on a normal basis, as the jobbers' stock—of those who are not buying now—will be depleted.

We still have sufficient orders on hand to carry us up to October 15, running to full capacity.

In our opinion, the jobbers will find it just as hard to get our class of merchandise this fall as they did a year ago. We are confident that there will be no reduction in prices for some time to come.

Very truly yours,
AMERICAN GRINDER MFG. CO.,
Chicago, Ill. C. N. Jonas.

---

## MUST HAVE GOODS TO SELL THEM

Editor HARDWARE WORLD:

There is every reason just at the present time for the trade to order their full requirements for fall business. Raw material costs are advancing in many cases and while there has been a recent reduction in the price of linseed oil, that reduction is more than overcome by the increased cost of other goods, this latter being brought about to a degree by the transportation situation. This also is a factor which should lead buyers to make fall provision for their requirements at once. The man who has the goods in stock is the man who will be able to supply them.

Yours very truly,
E. I. DUPONT de NEMOURS & CO.,
Wilmington, Del. R. W. Sample, Paint & Varnish Div.

---

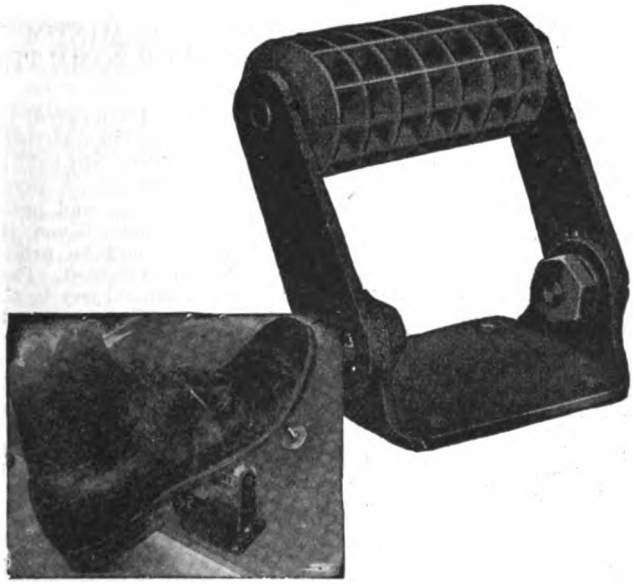
## PRACTICE WHAT THEY PREACH

Editor HARDWARE WORLD:

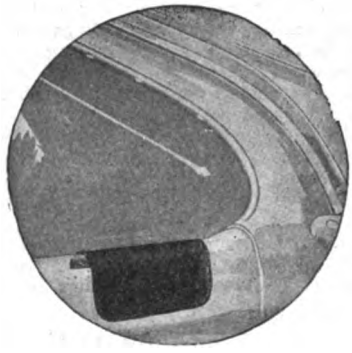
Our advice is to purchase now. We do not look for lower prices, with the great demand for all kinds of goods, with the high wages of labor, with the great demand for all kinds of material, all manufacturers being full of orders. We do not see any reason for lower prices under those conditions, at least for the balance of this year.

We ourselves have placed large orders for goods running well into next year, feeling perfectly safe in doing so.

Yours truly,
THE FRED J. MEYERS MFG. CO.,
Hamilton, Ohio. Fred J. Meyers, Pres.

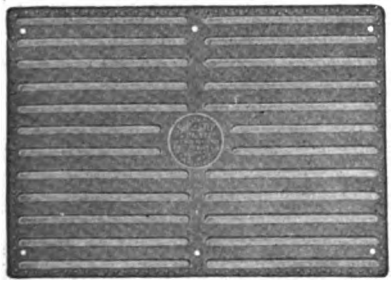


---



The John McFadden Hardware Company of Santa Ana, California, is planning to double its capacity by erecting a modern new store building to include the present site and more property adjoining. The company will have 16,250 square feet of floor space when the new building is completed. The McFadden Company was organized fifty years ago at Santa Ana.

---



The Cash Hardware Co., Tekoa, Washington, plans an extensive pipeless furnace campaign in its community during the coming season. A carload shipment of the furnaces has been received, and the ten day special sale is being widely advertised.

# Stanwood Products

Here are several little accessories that add greatly to the comfort, convenience and satisfaction of the driver whose car is equipped with them.

STANWOOD ADJUSTABLE ACCELERATOR FOOT REST sells at sight. The user receives lots of comfort from this device—relieves leg muscle tension, acting as a foot support. It can be adjusted to the position of any driver. It is a reliable safety device, preventing unintentional acceleration over rough roads, crossings. Price, each, $1.60, List.

STANWOOD SAFETY STEP PLATES are indispensable as safety devices—prevent slipping when entering and leaving the car. They also protect the covering on the running board.

Step Plates are subjected to rough treatment and should be built to stand it. Stanwood Plates consist of rubber covered sheet steel bases, from which solid rubber longitudinal ribs project. They always look well and do not discolor and mat down. They outlast any other step plate on the market.

Stanwood Safety Step Plates are manufactured in a variety of styles, and are priced to meet the requirements of any car owner. Type A, $3.70; B, $2.65; C, $1.60; Ford Type, $1.60, List.

STANWOOD ACCELERATOR HEEL PLATE furnishes a stable position for the heel when operating the clutch and brake. It prevents wearing hole in floor covering of car. It is built like Stanwood Safety Step Plates. Price, each $.85, List.

STANWOOD CONFORMABLE HAND PADS add a pleasing appearance to a car. They prevent finger marks and wear on finish of car. Made of leather in various grains. Price, each, $.90 to $1.80, List.

**COMPLETE CATALOG WILL BE MAILED UPON REQUEST**

**STANWOOD EQUIPMENT COMPANY**
308 North Michigan Blvd., Chicago, Ill.

# SILVERWARE AND ALUMINUM PRICES WILL NOT BE LOWER

## SILVER MANUFACTURERS ANTICIPATING HEAVY DEMAND

Editor HARDWARE WORLD:

We anticipate that in our line there will be a scarcity of merchandise through the year 1920, and we are, therefore, making our purchases and placing our orders and specifications based on that theory, striving to obtain our materials and striving to increase production.

We feel that in placing our orders early, rather than late, while we may be perhaps making a mistake, we will be amply paid by having merchandise and materials when others who do not do so will not have. We feel that the same condition probably faces both the wholesale and retail, and that those who get their orders in early will profit much more largely than those who delay, hoping against hope that there will be a reduction in price or a plenthora of merchandise.

While silver has been reduced somewhat in price within the past ninety days, labor and other materials more than offset any reduction that there has been in silver, so we cannot feel that silver plated ware can possibly be lowered materially in price.

Very truly yours,

INTERNATIONAL SILVER CO.,

Meriden, Conn. George H. Wilcox, Pres.

## EXPECT SHORTAGE IN ALARM CLOCKS

Editor HARDWARE WORLD:

We firmly believe that those jobbers or dealers who hold off in placing their orders to cover their fall requirements, will find themselves later on unable to secure clocks enough to only partially meet their own orders. There has been a tendency in some quarters to cancel orders—possibly with the idea of reinstating these orders or a portion of them later on.

This is an unsafe policy, we believe, for any jobber to pursue, because any reinstatement of orders means that such orders will have to take their place in line, and there is every evidence that there is going to be an acute shortage in alarm clocks this fall. All clock companies are heavily over-ordered and have been all the year. Production cannot be increased except to a limited extent, and with a tremendous amount of old orders still unfilled on the books and with the fall season fast approaching, we cannot see anything but a big shortage in clocks this fall.

We believe that prices have reached their peak, but there is no possibility, as the situation stands today, of any reduction in prices, because the cost of production still continues upward instead of downward.

We strongly recommend that both jobbers and dealers plan upon placing their orders early, and at the same time conservatively, because there has been a tendency to pyramid on orders in the past, and particularly does this refer to the watch business which has slowed down to some extent, and primarily it is to the condition to which we have just referred—more than anything else.

Very truly yours,

THE NEW HAVEN CLOCK COMPANY,

New Haven, Conn. F. L. Bradley, Sales Mgr.

---

The Detroit Twist Drill Co., Detroit, Mich., announces a New York sales office at 45 Warren St.

---

George A. Legg, president of the Alpha Hardware & Supply Co., Nevada City, with a chain of stores in Northern California, has sold his interest in order that he may retire. Mr. Legg has headed the Alpha Supply Co. for over thirty years, and is responsible for the growth of the institution.

## PRESENT PRICES ON ALUMINUM WARE WILL HOLD GOOD FOR SOME TIME

Editor HARDWARE WORLD:

While conditions are somewhat improved, the labor and material markets are still far from settled.

Our opinion is that present prices will hold good for some time. We feel almost positive in saying that there will be no reduction this year and perhaps for some considerable time after that. Even if prices should decline, our customers would be protected as far as their unfilled orders are concerned. Practically all of the orders on our books are subject to the lower prices if unusual conditions should cause a sudden upheaval of the market.

There is still an acute shortage of sheet aluminum and other materials with no immediate relief in sight. We have new factories all set for tremendous production when the raw material market adjusts itself to normal. In the meantime we are telling our customers that it would be wise policy to continue ordering their aluminum long before it is actually needed.

Yours very truly,

ALUMINUM GOODS MFG. CO.,

Manitowoc, Wis. A. J. Vits, Gen. Sales Mgr.

## SHOULD PRICE PROTECTION APPLY ONLY TO BUYERS?

Editor HARDWARE WORLD:

We believe the trade should buy to cover their requirements at prices prevailing at time of shipment. Protection against decline should not be expected unless the purchaser is willing to accept advance, should same occur.

Respectfully yours,

J. H. WILLIAMS & CO.,

Brooklyn, N. Y. Hugh Aikman, Pub. Mgr.

## NO DROP IN PRICES ON LEVELS

Editor HARDWARE WORLD:

Would strongly urge both the wholesale and retail dealers to place their orders and specifications for their requirements, especially on tools, at once for the coming season. The present prices on levels will hold for some time to come, as we have just allowed another wage increase to our employes working on Sand's Plumbs and Levels. Because of the fact that the higher freight rates are in effect now and that deliveries are slow and uncertain, it is well to have the goods on hand two or three months before they are actually needed, for it is going to take the railroad companies a long time to pull out of the present hole which they are in.

Again we urge all hardware dealers to place their orders at once, as prices on levels will not be any lower for some time to come.

Yours very truly,

J. SAND & SONS,

Detroit, Mich. F. Sand.

## HIGH COAL, STEEL AND FREIGHT

Editor HARDWARE WORLD:

We cannot see at the present time how prices can be lowered. Coal and steel are very high, and are bound to be higher when the new freight rates take effect and labor is still high, so that we cannot see any lowering of prices for the next few months.

Very truly yours,

THE JAMES SWAN COMPANY,

Seymour, Conn. W. M. B. Swan, Pres.

Digitized by Google

## GIVE CLOSER ATTENTION TO TURNOVER

Editor HARDWARE WORLD:

The question of turnover of merchandise is, in my opinion, an extremely important subject which is too frequently overlooked by retail merchants. It is not necessary for a retailer to purchase in large quantities thereby having a considerable amount of his capital tied up in a big quantity.

The most successful retailers watch the turnover of their merchandise very carefully. They buy in sufficient quantities only to last a reasonable length of time, placing orders frequently with the jobbers. In this way the jobber carries the stock for the retailer, which in my opinion is the function of a jobber.

I have also found in a number of cases that retailers do not make a big enough effort to move slow selling items. Often times it is necessary for the merchant to take a slight loss on these items to move them quickly. This many of them hesitate doing and are therefore compelled to have their capital tied up in slow moving goods. A number of failures that have come to my attention have been caused by this, coupled with poor collection of accounts.

One thing, however, that the retailer should not overlook is the fact that he must carry a well selected stock of merchandise at all times, while if he goes to the extreme of ordering too small a quantity and neglects to order frequently and intelligently, his stock becomes broken up, his customers are unable to obtain their requirements from him and send to mail order houses for the goods. I am confident that the merchant who will keep his stock complete on good selling items, move slow selling merchandise promptly and be reasonably careful about his collections, will have no difficulty in weathering any financial crisis which may come upon the horizon.

Yours very truly,

BALLOU & WRIGHT,

Portland. C. F. Wright.

## KEEP STOCKS COMPLETE IF POSSIBLE

Editor HARDWARE WORLD:

From prssent indications we are to experience a very brisk trade in the entire line of shelf and heavy hardware throughout the fall. These indications are arrived at from the fact that our crops are heavier than they have been in years, which, coupled with the fact that the sheep and stock have had good range throughout the summer which will last well into the fall, will warrant unusual purchases by the stockmen, sheepmen and farmers throughout the territory.

From the present outlook, there will be more of a problem in supplying the demand than there will be in obtaining the usual fall business, due to the fact that stocks are somewhat short and that the railroad situation does not show any immediate relief, even with the increased freight rates which are soon to be in effect.

We realize that the present financial market has not been very encouraging to the merchant throughout the territory and that he has had to carry a large amount on his books during the summer, but we feel that he will make no mistake in having his stocks as complete as possible to take care of the fall trade.

Very truly yours,

Baker. Ore. BASCHE-SAGE HDWE. CO.,

## A PROBLEM TO KNOW WHAT IS BEST

Editor HARDWARE WORLD:

As far as we are concerned in our territory, good crops and plenty of work for everybody have made business good; in fact, it is running nearly 50 per cent better than a year ago. The demand for most staple goods is just as insistent as it has been, but is slowly slacking up on luxuries and goods that have reached too high a price and consumers expect to buy for less by waiting.

New building activities have been slowly letting up for some time and will continue to grow less on account of shortage of material and bad labor conditions, but there has been a slow increase in repair work, as many buildings, especially houses, that would under normal conditions be torn down are now being fixed to give a few more years' use. As a result, we do not feel the shrinkage in new building as much as we otherwise would, while we believe that merchandise is on the peak, although some goods will go higher, but enough more will get cheaper, so that a hardware stock ought not to suffer any shrinkage in the next year if carefully watched and dead stock goods likely to decline reduced.

While jobbers and manufacturers are putting up good arguments to induce dealers to place orders for spring goods, we have so far absolutely refused to buy anything for shipment past this fall, and unless there is a radical change in conditions, will maintain that policy, and as we look for a scarcity of most staple hardware for at least a year to come, see no advantage in contracting for goods for next spring that our experience this season leads us to believe we will not get many of if there should be further abnormal advance in prices or a greater scarcity.

We received garden hose bought August 8, 1919, on July 28, 1920, other hose goods bought in November and shipped in March, have not reached us yet—only one-third of our wire cloth has arrived, most of the balance will be cancelled by makers—last of our lawn mowers have just come in—poultry netting ordered in November arrived in June. Ice cream freezers are not here yet. Lock-sets bought in November have not been made yet, or if they have, someone else got them, becaus they would pay more money for them. Brass goods ordered last July are still promised to ship soon. Only one-third of the bolts bought in October have been shipped.

As a result, we figure that to place orders now for goods for next spring shipment will simply make a repetition of last year's early orders, and if a further big advance in price and railroad conditions don't improve, we stand for cancellations and delays and must take in stock past season, while if things do clear up, goods become plentiful and there is a break in prices, we would be compromised with high priced goods that we would have to take in and stand a loss on.

We may be using poor judgment in our attitude, but we would rather play safe or even go out of business entirely than to go through another such year as we have this, and I have a suspicion that the majority of retail hardware dealers are figuring a good deal the same way and that this will have an effect on reducing demand and perhaps help to correct the shortage that now exists.

Yours very truly,

VANDERVOORT HDWE. CO.,

Lansing, Mich. A. T. Vandervoort, Pres.

---

The Toledo Hardware Co., Toledo, Washington, has been sold by J. M. Alger and M. L. Stewart.

---

The Washington Tool & Hardware Co., Tacoma, is said to be the oldest store there, with 35 years of history behind it. The present vice president, Allan Browne, started with the firm nine years ago as a clerk, and is at the present time one of the most representative and active citizens of Tacoma.

## SEE SHORTAGE THROUGH LABOR DEMANDS

Editor HARDWARE WORLD:

If the retailer will buy hardware and spring goods now, and get same in their house as soon as possible, they will have the goods to sell when the selling time comes. We believe the same trouble will exist next spring that existed last spring. We believe goods will be scarcer and higher.

As long as the union employes get what they ask for, increase in wages, so long will there be less goods manufactured and higher prices.

The farmer's products, wheat, corn and meat, should advance in proportion to the advance of wages. Seems that labor is having the best of the argument. The employe's wages are going up and the farmer's products are going down.

The more you pay labor, the less they will work and the less they will produce. For this reason, we believe if the dealer wants goods to sell he had best buy them as soon as he can and get them in the house.

Yours truly,

BOETTICHER & KELLOGG CO.,

Evansville, Ind. Oscar Boetticher, Vice Pres.

---

## PRICES ON SAWS WILL NOT DROP

Editor HARDWARE WORLD:

We are inclined to believe that both the wholesale and retail hardware business should improve materially in the next six months, and we do not look for any reduction in the prices of tools, due to the advance of material and labor, and from a recent newspaper report we would suggest that orders for fall shipment be placed at once, as the steel companies are overloaded with orders, and the capacity so badly overtaxed that it will be a question of time only and not price in getting the necessary material for the manufacture of tools to supply the demand in the near future.

Yours very truly,

THE OHLEN-BISHOP CO.,

Columbus, O. Frank Gould, Sales Div.

---

## PHONOGRAPHS WILL NOT BE CHEAPER

Editor HARDWARE WORLD:

In our opinion the general conditions of the market have greatly improved and we are looking toward a very large volume of business during the coming fall and winter season. The downward trend of prices has not affected the phonograph industry in general, as most manufacturers work only with a very small profit and the cost of producing talking machines has certainly not decreased.

Should the price of panel stock drop, it will of course have a slight reflection on the quotations for machines. But nobody is looking toward an extensive decrease of prices for panels. It is absolutely necessary that the trade is placing their orders for phonographs at the earliest possible date, as it will be out of the question that the demand for machines can be satisfied, unless orders are placed way ahead.

Dealers who think they will profit by not ordering anything at this time are committing an error, as we are certain that their requirements will never be filled when the season starts. Most manufacturers have thousands of orders booked ahead, which of course must be attended to first and customers who are not very quick in placing their orders will only get what is actually left or nothing at all.

Detroit, Mich. OPEROLLO PHONOGRAPH CO.

---

The Redwing Hardware Co., Grand Forks, North Dakota, has been purchased by Hoffman and Hanson, although the name will remain as before. The business has been established over thirty years, and is both wholesale and retail.

## A FRANK STATEMENT

Editor HARDWARE WORLD:

In our judgment most jobbers and big retailers are putting up a bold front and I hope we will all get away with it, but present abnormal conditions can't continue much longer without disastrous results, as we absolutely know that while we are doing a big business, we are losing money on 90 per cent of the goods that we buy today on present market and sell in competition with other dealers who are better fixed and are unloading on these particular items.

We shall be obliged to look to bankrupt stocks and people going out of business for the bulk of our goods for some time to come. A lot of dealers have gone out of business, a lot more will be obliged to follow, not many, however, are going broke—they are simply liquidating and getting out without any fuss.

The labor situation is the hardest problem to contend with. It is costing us today practically twice as much for labor, when you figure results, mistakes and shorter hours, as it did when the war stopped. Another serious problem is the inability or refusal of most manufacturers to fill back orders on which goods have become abnormally scarce or advanced heavily. Our loss so far this year is several thousand dollars on account of the cancellation of orders or failure to furnish in time to use for season's needs.

**Costs More to Keep Records Than Taxes Amount to**

Another serious problem is taxes, which are costing a good deal more to keep track of and compile than to pay, in fact, if federal income, capital stock, luxury and other taxes become more complicated, it will be practically impossible to handle them without an enormous addition to our expenses. For instance, it cost us fully twice as much to procure the data and make our income tax return this year as the taxes and we are likely to be annoyed for a good while to come by investigations, supplemental reports and other troubles incident to taxation conditions. I believe that it is costing the average small tax payer a good deal more to find out how much his taxes are and to keep track of reports and make returns than it does to pay the taxes—this is another burden that eats into the profits and takes valuable time that could be used to good advantage in the regular conduct of business.

Yours very truly,

## BE CAREFUL—DON'T LOAD UP

Editor HARDWARE WORLD:

The policy we intend to follow in placing orders and specifications for the coming season is to cover our anticipations only.

Production will have a slim chance to catch up with demand if we all order double what we expect to sell, and should we double our orders and receive them in full, there would be a chance of carrying over a lot of goods to a declining market.

Some of the jobbers laugh at us when we say that the peak is reached, and there is but one way for prices to go—that's down, but our advice to retail merchants is be careful how you buy. This is no time to load up. Very truly yours,

AVIS HARDWARE CO.,

Pomona, Cal. Chas. E. Otto, Mgr.

J. R. Minshall at Broadwater, Nebraska, has been succeeded by the A. R. Shoemaker Hardware Co.

Sam Director of Portland, Oregon, has purchased the hardware and implement business of J. R. Peters at Wilsonville. Mr. Peters is a pioneer northwestern merchant, having been engaged in business for twenty-three years. He has also been a postmaster for the last twenty years.

## 120,000,000 PEOPLE MUST CONTINUE TO LIVE

Editor HARDWARE WORLD:

In these times it would merely be a guess, as it is impossible to say what way the tide will turn. Of one thing we are certain, however, and that is that there are 120,000,000 people in the United States who are going to live regardless of high costs or other things and that at the present moment, with the high wages which labor is receiving, for the quantity of money it is spending, a merchant practically knows the volume of his business and it would be well undoubtedly for him to protect himself to a certain extent even at high costs.

At the present moment, even with the high rates of exchange, there is a big outlet for American products in foreign countries and we have noticed that a large number of manufacturers are using this outlet who find that their line is not selling particularly well in this country at the high prices. This is mostly noticeable in the boot and shoe business, which is practically stagnant in this country, although if reports are correct there is a big outlet for them at a fairly high figure in foreign countries.

We cannot see any possible chance of a quick reduction in prices and we believe therefore it would be well for a merchant to moderately stock himself, as the requirements of the country are such that if purchased within reason that they would be left with very little stock on their hands.

You have asked us a very hard question and we are afraid that we are unable to give you a very intelligent answer, for the reason that it is all a guess on our part. Yours very truly,

THE H. C. COOK COMPANY,

Ansonia, Conn. H. P. Carter, Vice Pres.

## BUY ALL YOU REALLY NEED

Editor HARDWARE WORLD:

We think that all merchants should buy what they need at current prices, but they should not buy in excess of their estimated requirements. We think this is true not only at this time, but at all other times. It takes courage for a merchant to place an order for his estimated requirements when business is dull and it also takes courage for him to resist the temptation to make a speculative profit by over-buying when business is brisk and the market is going up. However, if all merchants have this courage, the business of the country would be on a much more stable basis.

The merchant cannot by his own efforts stabilize general business conditions because too many factors aside from the merchant enter into those conditions. However, the merchant who gets "cold feet" on his buying, necessarily reduces the purchasing power of a certain part of the public, namely, the men who would draw wages or profits from the production of the goods which he would ordinarily buy.

So far as prices are concerned, they are only the index of the demand. As long as the people as a whole are fully employed at good wages, the demand for merchandise generally should be good. We have never yet heard of prices declining in the face of a good demand. While we do not look for higher prices in most lines, we fail to see how prices generally can be reduced unless labor costs are correspondingly reduced.

Yours very truly,

THE PHILIP CAREY CO.,

Cincinnati. O. A. Bigler, Asst. Sales Mgr.

Frank Laning & Son have succeeded Jesse C. Brown at Reedley, California. Mr. Laning is a former city attorney at Fresno, California, and is well known in the San Joaquin Valley. Mr. Brown will confine his efforts to ranching. W. P. Boyer continues as manager of the company.

## STEEL DELIVERIES SLOW—LABOR SCARCE

Editor HARDWARE WORLD:

If we are to judge from the present steel situation, we are of the opinion that dealers will do well not to delay placing their orders. Steel deliveries will be slow and the steel mills, according to reports, will never be able to supply anywhere near the amount of steel that is going to be wanted.

In addition to this, we must consider the labor situation, which is, if anything, more acute with the manufacturer at this time than it was previously, for the reason that much of the help is going into the country and this movement will naturally slow up manufacturing.

In our particular line there are no surplus stocks—merchants having made a cleanup, so that the merchant who delays ordering with the thought that prices are going to be lower will be, we fear, disappointed, and while we are not advocating any buyer's stocking up bevond his needs, we do think it is good business to order conservatively and well in advance of requirements. Yours very truly,

STURGES & BURN MFG. CO.,

Chicago. W. H. Burn, Vice Pres.

## PRICES WILL NOT DECLINE

Editor HARDWARE WORLD:

Our advice to the trade purchasing our goods would be to buy conservatively their requirements, but without any hesitancy.

The prices of our goods will not decline, but have rather a tendency to advance. Materials are extremely short, and mill conditions are now worse than at any time during the past three or four years. This shortage of material naturally will be reflected in the price later on, although we ourselves are absolutely adverse to any advances.

Some mills are offering steel and tin plate at premium prices at as much as 50 per cent over the regular price. Unfortunately, manufacturers are compelled to purchase some of this material in order to keep their organization togetner, and this, too, may be another reason for advances.

Yours very truly,

SCHLUETER MFG. CO.,

St. Louis. W. H. Schlueter.

## COLORADO DEALER WILL ENDEAVOR TO REMOVE CAUSE ON NOVEMBER 2

Editor HARDWARE WORLD:

Trade conditions are probably as good here as anywhere, considering natural unrest with our trade caused by the unwarranted abnormal extortionate prices.

While we are not advising other dealers, we ourselves are only buying for current requirements. We will continue this policy until conditions are adjusted or the cause of profiteering removed, which we will endeavor to do November 2.

Thanking you for the courtesy, with our best wishes for the continued success of your most valuable magazine, so helpful to us, and which we so thoroughly enjoy, we beg to remain,

Cordially wours,

THE CURD HDWE. & IMPLEMENT CO.

Pueblo, Colo. R. D. Curd.

P. S.—We are not the Brinkly-Curd any more, having acquired the Brinkly interest March 16. We are only the Curd Hardware & Implement Company. We have been too busy to tell you, pardon our neglect. We cannot get competent help and we are not like somebody who cannot do it ourselves, so we just buckled in and do the work ourselves and let the fellow who wants all pay and no work go to ——— heaven.

## PRICES GENERALLY HAVE REACHED THE APEX

Editor HARDWARE WORLD:

It seems to be a concensus of opinion of those who study conditions that prices generally have reached their apex; at any rate, they have reached a point where it is necessary to use extreme caution so as not to overbuy, and while there is nothing to indicate at present a decline in metal goods for the balance of this year owing to present conditions surrounding the iron industry, the producing ability is so great in the United States that the return of conditions to a somewhat normal state would influence greatly the cost of metal lines.

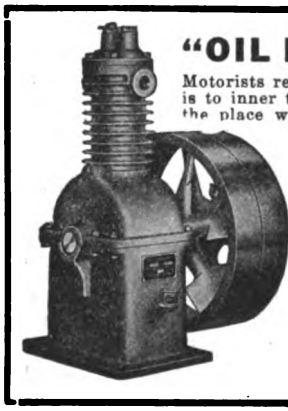
It has been our observation that one of the greatest evils in business is that of overbuying. The allurement of a little better discount often induces the merchant to buy in much larger quantities than he would ordinarily, with a result that he greatly increases his investment, and if his capital is limited necessitates asking an extension of credit and forces a curtailment of the larger assorted stock he knows would be to his advantage to carry. The condition of the times makes it imperative that very close attention be given to credits both from the buying and selling end.

The jobber, with his large assortment to draw from, is here to aid the merchant in handling his business and to assist him in protecting him against any emergency that may arise. He has stood in the breach in the past, and it certainly looks like good business for the merchant to avail himself of the advantage that the jobber offers in the handling of his business to enable him to use his capital to the limit to make his quick turnover, and, as statistics show, the merchants who have utilized these facilities have been uniformly successful. Yours truly,

HOLBROOK, MERRILL & STETSON,

San Francisco. H. Morris, Pres.

## NO REDUCTION IN BRAKE LINING PRICES



Editor HARDWARE WORLD:

We may say that in our opinion any reduction in brake lining prices to the trade will be quite unlikely before the end of 1921, if then, and consequently, it is our opinion that the trade will have nothing to gain by deferring purchases at this time anticipating lower prices in the near future.

It is to be noted that prices for the best brake linings are today not quite double the prices existing in 1915, whereas the cost of production, materials, etc., is considerably over double. Brake lining has shown very little change in price during the past couple of years, though cost has steadily mounted, and therefore even though there should be a slight decline in the cost of labor and materials, which we do not anticipate, it is quite unlikely that any reduction in brake lining prices could take place at this time. Yours very truly,

AMERICAN ASBESTOS CO.,

Norristown. J. C. Johnson, Asst. Mgr.

"OIL RUINS TIRES"

Motorists realize what a great menace oil is to inner tubes and, therefore, look for the place where they can fill tires with

CURTIS AIR—FREE FROM OIL

Five different sizes of compressor, 125 different combinations of outfits. In stock at most jobbers. Price is right. A result of 25 years' experience in compressor manufacturing. Send for Bulletin C-5.

## END OF BUSINESS EXTRAVAGANCE NEAR

**National Association of Credit Men Sure Excess Profits Tax Will Be Abolished**

Information that both Presidential candidates are in favor of revision of the taxation laws and repeal of the excess profits tax has renewed the efforts of the National Association of Credit Men to present a plan that will result in all of the income of the country being taxed in proportion to the amount received by. the individual. If this is done there will be plenty of revenue for the government, according to J. H. Tregoe, secretary-treasurer of the organization which has a membership of more than 33,000 business houses.

The committee on federal taxation, of which Roy G. Elliott, of Chicago, is chairman, has just issued a pamphlet favoring the substitution of a corporation earning tax at a graduated rate that will have a tendency to encourage payment of dividends. The recommendations are made on the grounds that if the re-invested income of an individual and the partner are subjected to the surtax as at present, then the reinvested income of the corporate stockholder must be treated in substantially the same manner. The undisturbed earnings of a corporation are the reinvested income of the stockholders, points out Mr. Elliott.

"The excess profits tax has encouraged so much business extravagance that the removal of such an assessment would tend to eliminate trade waste which would increase business income subject to income taxes," writes Mr. Elliott.

"The National Association of Credit Men is on record as being in favor of the levying of a tax on the earnings of the investment of each individual on the basis of substantial equality with every other individual enjoying the same measure of prosperity and without discrimination against incomes derived from any particular form of business organization.

"The proposed general sales or turnover tax would be passed on through the channels of distribution resulting finally in a levy on the consumer, doubtless of larger volume than the revenue received by the government, which would be a tax levied not in proportion to ability to pay but in proportion to the necessities of existence.

"Under the present law individuals, whether conducting business alone or in partnership, are liable for tax on all profits whether drawn from or left in the business. The corporation, on the other hand, after paying excess profits tax and normal income tax, may retain its earnings as working capital and the individual stockholder remains free of liability for super income tax until dividends are distributed. Gross inequality results from this situation. Equality of distribution of the burden of taxes should replace the present system."

## AMERICA WILL NEVER FAIL, BUT FIRST DUTY TO KEEP OUR OWN HOUSE IN ORDER

"America does not propose to hold aloof, chooses no isolation and shuns no duty, but we arrogate to ourselves the keeping of the American continent and every concept of our moral obligation.

"It is very practical to make sure our own house is in perfect order before we attempt the miracle of old world stabilization.

"Americanism really began when, robed in nationality, the American republic blazed the trail of representative popular government. Representative democracy was proclaimed the safe agency of highest human freedom.

"The federal constitution is the very base of Americanism, the ark of the covenant of American liberty, the very temple of equal rights. The constitution does abide and ever will so long as the republic survives.

"Let us hesitate before we surrender the nationality which is the very soul of highest Americanism. This republic has never failed humanity nor endangered."—Senator Harding.

## A. J. SAVAGE MUNITIONS PLANT SOLD

The plant and equipment of the A. J. Savage Munitions Company, at San Diego, has been sold to Lewis A. Hicks of San Francisco, as trustee, having in charge the organization and financing of a new $3,000,000 corporation to carry on the manufacture of the new Savage patent sporting fire arms, at San Diego.

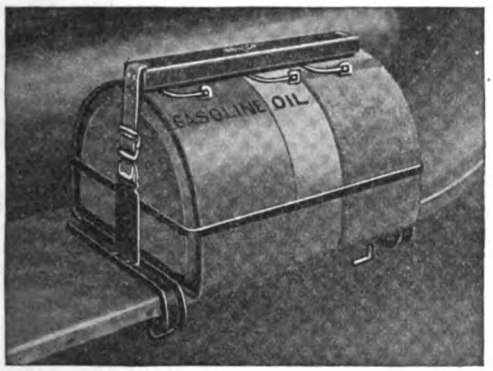
The actual work of manufacturing these arms is expected to commence in October, and the plant will be enlarged as rapidly as possible so as to be able to meet the demand for these new guns.

The new corporation is being financed by the underwriting of $1,000,000, of first mortage gold bonds, bearing 6 per cent with a bonus of an equal amount of 4 per cent cumulative participating preferred stock, insuring the investor not less than 10 per cent return on his capital, with liberal participation in net profits and continued ownership interest after the bonds are retired.

The underwriting conditions are even more attractive, and the opportunity to participate in its special advantages have been thrown open to the gun trade until October 1, 1920, with certain advantages to be gained by distributors who become underwriters.

Inquiries regarding sales contracts should be addressed to Lewis A. Hicks, care of A. J. Savage Munitions Company, San Diego, California.

W. H. Baker at Alvin, Texas, has purchased the stock of the Alvin Hardware Co.



Shervey & Buss is a new institution at Lake City, Oklahoma. P. S. Shervey and Henry Buss are the partners.

A new institution at Lanhandle, Texas, is the Stone Hardware Co., incorporated by F. H. Hill, D. C. Stone, Jr., and W. F. Simms. The capital stock is $20,000.

A significant indication of the business possibilities of Texas is the announced increase of the capital stock of the Huey & Philip Hardware Co. at Dallas, from $300,000 to $600,000. Huey & Philip do both a wholesale and retail business at Dallas.

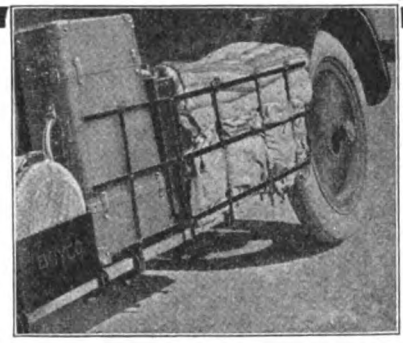
# Ask your Jobber for BOYCO PRODUCTS. If he cannot supply you, mail us your order with his name and address. Service will be rendered

## Boyco Service Units

Boyco Service Units for carrying extra gasoline, oil and water on the running board fill an actual need. They are in demand every day of the year. A useful product that means desirable business and increased sales.



## EZ Luggage Carriers

**EZ Luggage Carriers fasten firmly and readily** to any running board and provide dependable security. Easiest and most quickly adjusted luggage carrier made; occupies a minimum of space when not in use. You will find a wide demand for this product.

## Boyco Canteens and Carriers

Boyco Canteens and Carriers mean substantial increases in business to jobbers and retailers. Complete information, sizes, weights, and details of construction are contained in our booklet, "Canteens and Carriers." Send for it today. There is a Boyco Canteen for every purpose; a Boyco Luggage Carrier for every demand.

## Boyco Carryall

The Boyco Carryall is the strongest and most substantial device of its kind on the market. It is adaptable on any car to the carrying of every description of luggage and equipment.

## The BOYCO Line For Year 'Round Sales

Boyco Luggage Carriers, Canteens and Service Units are quick sellers every month of the year.

They are in demand everywhere at all times; they are not limited to vacation use; they are actual necessities made to fill definite needs.

Boyle products are built right: best materials, high grade workmanship and practical designs. They are sturdy and durable. You will find them a line upon which you may depend for steady year 'round business, quick turnover, and satisfied patronage.

**BOYLE MANUFACTURING CO.**

5100 Santa Fe Street
Los Angeles

## Auto Canteen

**This Flat Bottom Auto Canteen comes in different sizes suitable to the requirements of every motorist. Its outstanding practicability makes it a quick seller.**

## NOTHING TO GAIN BY WAITING

Editor HARDWARE WORLD:

In our opinion we would say that dealers and jobbers would do one of the wisest things in their business career to place their orders for the coming year now, as the market for raw material looks mighty uneven, and there is no doubt that some time in the next six months that manufacturers will be handicapped by not being able to get raw material.

As to prices, we hardly believe that they will fall before another nine months, but we strongly advise dealers, no matter how big or how little, that it is a wise thing that they stock up now on all kinds of articles, especially good sellers, for they might not even be able to get any should a considerable raw material shortage come.

There is still a chance to obtain raw material at some mills providing you wait from three to four months, and after these mills stop taking orders, the way hundreds are doing at present, there will be something to talk about.

We have tried to keep the price of our Pineapple Eyesnips down so that they could be retailed at 25c, until about three weeks ago when we found that for the last four months we have been manufacturing them at a loss, so we are forced to advance the price to dealers and consequently they must sell them at 35c, this price just giving us a chance to break even with much saving during manufacturing, thus leaving no profit at all, and according to rumors about raw material it will probably come to pass that they will have to retail for 50c each.

Our one advice is tell the dealers that they should not wait for prices to come down in a hurry, but they should buy all they can now, or they take one of the biggest chances to be disappointed. The price is bound to come down, but it won't come down very fast, as it took the prices three years to get where they are today and it will almost take that long for them to get back where they were in 1915.

Yours very truly,

CHRISTIAN SCHLICKER MFG. CO.,

Rochester, N. Y. Carl C. Schlicker.

## WORK FOR TWO THOUSAND IN BIG O. K. GIANT BATTERY PLANT

More than two thousand skilled and unskilled men will be employed in the plant of the O. K. Giant Battery Corporation at Gary, Indiana, by the time the eighth unit is completed this fall. Two buildings are now in use, and the third will be finished and producing at top speed by July 15, according to Paul B. Rabe, president of the Giant Battery Corporation, which is turning out a dry, rechargeable battery that will put an end to the expense and battery troubles of the motorist.

The contracts call for the completion of twelve buildings by December 30 of this year, and by the way the construction is being rushed now, all the units ought to be ready by that time. The O. K. Giant Battery Corporation, whose invention is destined to revolutionize the battery business of the world, has a tract of 40 acres on 37½ of which will be erected 40 buildings.

## AT TUBULAR FABRIC SALES CONFERENCE

C. D. Slaughter, secretary of the Allied Industries, Inc., last month visited Pawtucket, R. I., where he attended a sales conference of the Tubular Woven Fabric Co., makers of Duraduct and Duracord materials, well known to the electrical and automotive equipment trade. Mr. Slaughter also visited other factories which his company represents in the West.

## EVERY MANUFACTURER HAS HIS HANDS UP

Editor HARDWARE WORLD:

We hardly feel capable of giving advice to others, inasmuch as we have a particularly hard time in governing ourselves, in this direction at the present time, due to the great unrest and conflicting conditions continually arising.

It is rather difficult to suggest a policy which would govern other trades in regard to purchases, but our own policy for some time past has been to make purchases only of such goods as are absolutely necessary and essential to continue our business, in a healthy condition.

We do not like to be pessimistic in any way, but believe it is now time to look the facts in the face, not hidden possibilities.

With reference to prices, wish to state that we hardly believe that there will be any reduction in prices of finished material, until production is considerably increased and a recession of increased wages, is effective.

We regret exceedingly that we cannot be of more assistance to you in this direction, but we believe every manufacturer has his "hands up" under the present uncertainty.

Respectfully,

BUFFALO WIRE WORKS COMPANY,

Buffalo, N. Y. John C. Scheeler, Sec. and Asst. Treas.

## NEW YALE AND TOWNE OFFICERS

At a recent meeting of the board of directors of the Yale & Towne Mfg. Company, the resignation of John B. Milliken as treasurer of the company was accepted and Willard L. Case was elected treasurer to succeed Mr. Milliken. He will take up his new duties September 1st. Mr. Milliken will enter other fields.

After completing his educational courses at Peddie Institute and Brown University about 1906, and after two years' experience in a banking office, Mr. Case took up the study and practice of industrial engineering, and for the following five years had a wide range of experience, including that of advisory engineer to the Audit Company of New York. This work involved problems of operating, of management and of accounting. In 1910 he opened offices of his own for conducting a consulting practice relative to problems of construction, operation, management and finance in connection with manufacturing plants, and more recently he became a special member of a firm of certified public accountants.

Mr. Case's long experience has thus covered substantially all of the problems arising in the conduct of organized industry—especially on its economic and accounting side. He thus brings to his new position a long and varied experience in lines of work closely allied to those he will take up. The combination of technical knowledge and experience with long training in matters of finance and accounting is an unusual and most valuable qualification.

Edward C. Waldvogel, who has been in the employ of the company for 15 years, and who has occupied the position of general manager for four years, having charge of all sales and advertising, was elected a director of the company. Mr. Waldvogel started in business as a clerk in a retail hardware store. Later on he entered the hardware jobbing business, in which capacity he has had experience both as a buyer and a salesman. Later he entered the employ of this company as a traveling salesman, and was then promoted to a position in the general offices. He was later appointed assistant general manger, and in 1916 was appointed general manager.

E. D. Waller is the new proprietor of the former business of Gench Bros. of Rich Hill, Missouri.

## MILLERS FALLS CO. ADDS HACK SAWS

Kingman Brewster, president of the Millers Falls Co., at Millers Falls, Massachusetts, announces that the company has purchased the plant of the West Haven Mfg. Co., at West Haven, Connecticut, which for twenty-five years has been engaged in the manufacture of Universal and other brands of hack saws, band saws and small tools.

The acquisition of this fully equipped plant which has been making a blade of highest grade for many years, furnished a firm foundation upon which Millers Falls may build. It enables the Millers Falls Company to underwrite the quality, design and policies of distribution of this factory's full output. It meets the company's desire to add hack saws to its line, having been the originators of hack saw frames and power hack saw machines. It affords an opportunity for enlarging its capacity—need that has been urgently increasing in the steady development and growth of the company's business.

Not only will the Millers Falls Company continue the manufacture of Universal saws, but it will also make at its West Haven plant a complete line of both hand and power hack saws under the "Millers Falls" brand. Both "Universal" and "Millers Falls" blades will go to our many friends in the trade with the assurance they will meet the most exacting requirements.

The Millers Falls Company will be operated hereafter through its plants at Millers Falls, its plant at Brattleboro, Vermont, and its new plant at West Haven, Connecticut.

## HOCKLEY NOW OFFICER OF BARRETT-HAYWARD CO.

Announcement was recently made in Baltimore of the election of Chester F. Hockley, formerly vice president and general manager of the American Hammered Piston Ring Company, to the office of vice president of the Bartlett-Hayward Company.

Control of the American Hammered Piston Ring Company was taken over by the Bartlett-Hayward Company about a year ago, and the business moved from Newark to Baltimore.

Under Mr. Hockley's efficient administration, the piston ring company has become one of the largest and best known makers of rings in the United States, turning out upward of 50,000 rings per day.

---

The Wiley Hardware Co., Wiley, Colorado, reports business and prospects particularly active. They are specializing on cutlery.

---

The new building of the Pinon Hardware Co., Mountainair, New Mexico, will be typical of the region. It is built of adobe, with large plate glass windows and concrete floor.

---

Reports from New Mexico indicate that the general trend of the hardware business there is from 10 per cent to 20 per cent increase over last year's business. The only reductions reported are in the sale of nails, sheet iron and steel, due to delayed transportation.

---

"Trade Your Sad Iron for a Glad Iron," was the motto of a recent winning window display by the Haxtum Cash Hardware Co., Haxtum, Colorado.

The display was the work of Mrs. E. R. Boyd, wife of the proprietor, and showed an electric iron in contrast to the old-fashioned flat iron.

---

F. E. Fields, the enterprising proprietor of the Fields Hardware Co., Olathe, Colorado, true to his name, knows the value of a vacation as well as the value of hard work during the year. He spent two months this summer with his family on an automobile trip that took him through Oregon, Washington and California.

## NEW QUICK-LITE WINDOW CARDS

Every dealer, especially if he happens to be one of the more than 20,000 who handle Coleman Quick-Lite Lamps and Lanterns, will be interested in the new Quick-Lite window cards which the Coleman Lamp Company is distributing from its home office at Wichita.

This illustration shows the Christmas display card which will be furnished dealers to tie up with the Christmas advertisements which will be run in the national periodicals early in December. The advertisement and the card both call the reader's attention to the fact that Coleman Quick-Lites make excellent Christmas gifts.

Six cards comprise the set. There is a card for an attractive window display of Quick-Lites every season of the year. They are furnished only on request, but already the company has received a great many calls for them. It is said that they will be a most effective sales medium in aiding the Quick-Lite dealer make a quick turnover of his stock.

---

Tolman and Malinger is the new firm at Severy, Kansas, which has purchased the former stock of Malinger & Son.

## ECONOMY IN TIME AND SERVICE

The nail bin made by the Wellston Mfg. Co., Wellston, Ohio, has proven one of the greatest time savers, as well as one of the most economical methods of selling nails that can be installed in a hardware store.

This is the experience of merchants who have used these bins. One enterprising Arkansas merchant says they have saved him several miles of walking every month, and that it also enables him to materially increase his sales of screws, nails and bolts.

Other merchants who are using the Economy Bins say they would not be without them for four times the cost.

One has only to see these nail bins to realize the great economy in time that results from using them. They properly index and store nails of all sizes and keep them always handy and accessible, and prevent one's hands from becoming painfully cut or scratched. They enable the customers to see the various sizes of nails so he can pick out what he wants.

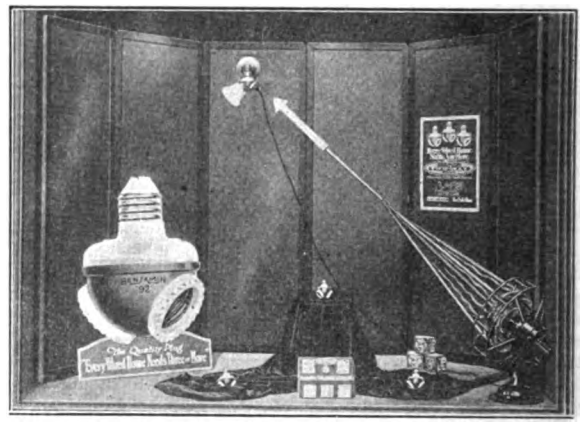
This nail bin occupies less floor space than any other method. Its actual dimensions is 48 inches in diameter by 60 inches in height. All bins and cases are steel, sectional, revolving, ball bearing.

The Wellston Mfg. Co. or their jobbing connections will be glad to give full information to any of our readers upon request.

In the Far West and on the Pacific Coast Le Roy Smith, 112 Market street, San Francisco, their direct personal representative. will be glad to give further information to any of our readers in that territory.

## ELECTRIC APPLIANCES STANDARDIZED

A sensational reduction in the number of appliances which the Simplex Electric Heating Co. make as standard is to be noted. Shortly before the war began the company made over 600 standard heating appliances. Today the list, which is down to rock bottom, and on which the company is building, consists of only 50 appliances.



The company now concentrates its manufacturing efforts on such leaders as the Simplex Electric Iron, the Sunbowl radiator, the heating pad, the breakfast room toaster and electric ranges. The shortage of material and the difficulty which the company experienced in getting special parts made is responsible for the cutting down of the number of items.

These Electric Ranges deserve the interest and investigation of every hardware merchant, who carries electrical goods at all, and the Simplex Electric Heating Co., at its main office 85 Sidney St., Cambridge, Mass., will be pleased to forward further information upon inquiry from any part of the country. All matters are referred by the company to the nearest distributor.

The Holden-Murphy Hardware Co. is one of the new institutions at Amorita, Oklahoma.

Yes, your show windows should always be neat and attractive but no matter how clean, bright and attractive your windows may be, if the interior of the store does not come up to them, you will be in the position of the man in the ragged clothes with a handsome overcoat when compelled to take the overcoat off.

GENUINE
**Hildebrandt Spinners**
Fish Catchers for 20 years.
Your customers want the genuine. A size, shape or finish for any game fish. Send for catalog.
THE JOHN J. HILDEBRANDT CO.,
Logansport, Indiana.

## FEATURING BENJAMIN TWO-WAY PLUGS

So many good Benjamin Electric dealers among hardware and electrical supply merchants have come in person with inquiries to the offices of the Benjamin Electric Co., Chicago, for help on the technique of window dressing, that the company has installed a model display at the home office.

This is the way it has been arranged, and surely it is a window that would attract attention anywhere and make sales, not only on the two way plugs, but on the general electrical line of any merchant who features the ready sellers in his stock by displays in his show windows.

All the material for this display is furnished by the Benjamin Co. to dealers, and it is known as the No. 92 Two Way Plug Window Display. If your window trimmer cannot easily reproduce the display from our photograph, the Benjamin Eluectric Mfg. Co. will be glad to forward further description and full material to make the display.

## STANLEY GARAGE SET No. 1783

A brand new folder illustrating set No. 1783 of the Stanley Works Garage Hardware is now ready for distribution to those interested. It is of course issued in neat, precise Stanley Works style.

This set is one of the more popular combinations for the better class of garage. It has the ball bearing hinges foot and chain bolts and the 1774 Garage Door Holder. In fact, it has every item of hardware for complete and serviceable equipment.

Any one of our readers who would care to have a copy of this book should write for B12. This is the key number for the attractive new sales help, since there are so many publications at the New Britain office.

The Minteer Brown Hardware Co. is a new institution at Walters, Oklahoma.

The Farmers Hardware Co. has been incorporated at Clover, Missouri, by George Pearce, E. S. Little, John Burkhart and John Teague, with a capital stock of $20,000.

The Groom Hardware Co., Bristow, Oklahoma, has purchased property on which to erect a two story building.

L. C. Renshaw has purchased the Ideal Hardware Co. at Eckley, Colorado, Chris Gardner and William Neuschwagner were the former proprietors.

Reports from Anthony, Kansas, indicate the progress of the Costa Hardware Co. It has been necessary to lease additional floor space to be used as a show room.

## MASSACHUSETTS MANUFACTURER'S CAREFUL ANALYSIS

Editor HARDWARE AND PLUMBING WORLD:

If your readers believe the published advice of the manufacturers from whom they buy then the responsibility of any manufacturer who presumes to give advice is something to be taken seriously. It is in that frame of mind that we undertake the task.

You ask what policy should govern the trade in making their purchases and placing their orders for the coming season.

Our answer is that it should be the policy of both wholesaler and retailer to analyze in the strictest possible way the territory he covers to determine

1. The kind of tools that will be required.
2. The potential market of the same.

It is our honest belief that the distributor, if he is so minded, can accurately forecast the amount and quantity of stock he is going to need and be 75 per cent correct. If he is wise he will quota himself and, on such goods as he knows will be demanded, he will place orders sufficiently in advance to insure the goods being in stock at the time the demand is felt.

Take our own business as a sample. The Automobile Chamber of Commerce has recently published statistics showing the total number of cars, pleasure and commercial, in each state of the Union. There is a direct ratio between this number and the number of cars repaired and it is even possible to determine the number of times on an average the one-year-old, two-year-old, three-year-old car will be in needs of repairs of a mechanical sort. In production tools it is possible to gain the confidence of Purchasing Agents to the extent of determining in advance with a fair amount of accuracy their needs.

Our advice you see contemplates two actions:

1st. The broadening of the channels of distribution from the retailer or wholesaler.

2nd. Ordering in line with these discoveries.

The trend of the market for tools such as taps, dies and reamers cannot help but be steadily forward. There may be slight temporary recessions which will not represent actual conditions but will indicate local adjustments and efforts towards stability.

There probably will not be so many new ventures or speculative enterprises but the requirements of the world will guarantee a steady demand for common sense merchandise. The luxuries will have to take their chances. For that reason the man who deliberately deprives himself of stock will lose out; the man who gets panicy will, as usual, find the man who keeps his feet on the ground profiting.

In our particular line prices have not increased because manufacturers of such goods as ours have been manufacturers and not speculators. If there is one branch of business in the United States today free from all imputation of profiteering, as shown by statistics, it is ours, consequently there is no danger of extreme breaks or drops in prices.

Prices that have shown rapid and sharp advances cannot hope for this happy condition, but in our line the rise has not been extreme, neither will the descent be, so there is no wisdom in delaying in the hope of obtaining lower prices. Purchasing agents tell us that the need they have is for local stocks on which they can get prompt deliveries and that their local supplies have a dangerous tendency towards the "pick-up" business. Referring again to our first piece of advice, we would say that the "pick-up" evil can be overcome by proper analysis of potential demand.

Very truly yours,

GREENFIELD TAP & DIE CORPORATION,

Ralph Barstow, Sales Promotion Manager.

Greenfield, Mass.

---

## WHEN LABOR CONCLUDES TO DO AN HONEST DAY'S WORK

Editor HARDWARE AND PLUMBING WORLD:

It is our opinion that the present slump in business will soon be over and that business will improve in the very near future. We anticipate that from the 15th of this month an improvement will be noticeable in all active centers, and from that date on we can look for a steady improvement over conditions that are at the present time affecting business.

According to Government statistics, living cost has not only not reduced, but, on the contrary, has increased two per cent since June, and there is little chance for a reduced living cost until labor concludes to settle down and do an honest day's work for the money they are receiving. It is our opinion that this condition will steadily improve and that during the winter much of the trouble that we have been experiencing will be eliminated. There is no question but that transportation difficulties have been one of the serious troubles that the country has been laboring under, and that improvement in transportation facilities will necessarily be slow, but, in the writer's opinion, this improvement will be steady and the country will profit by it.

So far as our company is concerned, we have had more than capacity business all the year, and while there is a temporary lull at the present time in some lines of our undertakings, at the same time, our present volume is nearly double what it was in 1914 or any year since then. Our new factory is rapidly approaching completion, and we will then have our capacity doubled, and we now have in hand orders covering practically capacity operation during 1921.

The writer thinks in the above you will find our opinion of conditions that will affect and influence fall buying. We shall be glad at all times to give you our ideas or opinions on matters of general interest.

Thanking you for your courtesy in the matter, we are

Very respectfully yours,

CLAYTON & LAMBERT MFG. CO.,

Detroit, Mich. John E. Lambert, Secretary.

## SHOULD ANTICIPATE REQUIREMENTS FOUR TO SIX MONTHS AHEAD

Editor HARDWARE AND PLUMBING WORLD:

Our opinion is that prices will remain around the same level this fall as they are at the present time, in fact the tendency shows more of an upward trend than it does the other way. It is true that in certain few lines prices have shown a sharp decrease, but this is more or less in our minds of a temporary fluctuation and prices will be back to the same level they were in the winter of 1919.

Manufacturers are months behind in deliveries and our advice to the trade would be to cover themselves as far ahead as they can possibly look. We are oversold for months ahead and our production is taxed to the limit to meet the demand which is rapidly increasing rather than decreasing.

From our standpoint, we cannot impress too strongly upon the buyers of trade to anticipate their requirements from four to six months in advance rather than hold off with the hope that prices will decrease, which we do not think will happen.

Very truly yours,

C. F. CHURCH MFG. CO.,

Holyoke, Mass. R. A. Witherell, Sales Dept.

## SAFE TO BUY FOR NEXT SIX MONTHS

Editor HARDWARE AND PLUMBING WORLD:

You, of course, understand that during times as are now existing, it is almost impossible to predict what is going to occur.

From the present outlook we feel confident that it is a safe proposition for the trade to place orders for delivery within the next six months. We really do not believe that there will be a decline within that time due to the fact that practically all prices are based on the present wages of labor. We certainly do not believe that there will be any reduction in the wages of labor for the next six months to come. In fact, there are quite a few strikes in force now throughout the country. If the demands made by those strikers are granted, it will, no doubt, be necessary to put into effect even higher prices than are now being charged by manufacturers.

We, the same as most manufacturers, have been hoping for lower prices, but up to the present time there really has been no reason why lower prices should be put into effect. Our operating costs today are really much higher than they were several months ago, yet we have not advanced our prices. As soon as we can produce goods at lower prices than those of today, we shall be only too glad to give the trade the benefit of such a decline.

While the above information is very indefinite, we trust that it will answer for your purpose.

Yours very truly,

OTTO BERNZ CO.,

Newark, N. J. By J. M. Infeld.

## SPEAKING FROM EXPERIENCE

"Rip Van Winkle," said the teacher who keeps the class interested by telling stories, "went into the mountains, took a drink with some strange people and slept for twenty years."

"I don't doubt it," commented the tall, slim scholar. "There's no tellin' what some o' the moonshine licker will do to a man."

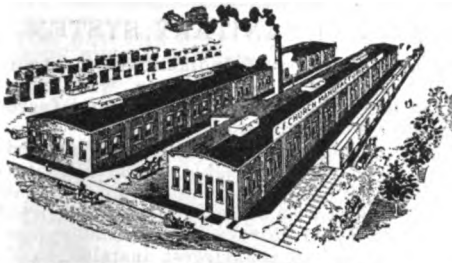
Conquer in the battles with yourself and the battle of life will become easier.

## OUR CREED

(Suggested to the Plumbing Industry by the Trade Extension Bureau, Evansville, Ind.)

We believe that

1. Goods and services must be sold at a profit.
2. "Do unto others as you would be done by" fully defines the ethics under which this industry will flourish most.
3. Proper accounting methods will cut costs, stimulate sales and reduce credit risks.
4. The whole industry, including the contractor, must go after business if they wish to get what they deserve.
5. Local newspaper advertising on the part of every contractor is just as certain to develop business in this industry as in any other.
6. The contractor who operates a modern store, equipped to give service equal to that offered by other lines, is bound to profit accordingly.
7. The chain of discounts from manufacturer, to jobber, to contractor, must be so adjusted that each gets paid fairly for the function performed.
8. Any action taken by one division of the industry, which affects another, is seldom satisfactory unless each division affected is represented in the consideration ahead of such action.
9. The public should be enlightened concerning domestic sanitary engineering, heating and ventilation, the value of these services and the problems involved.
10. Quality—of material, workmanship, and service—will bring lasting approval and increased profits in its train, as irresistibly in this industry as it does in every other.
11. Every contractor, jobber and manufacturer should belong to and attend the meetings of the associations representing their respective interests, for only through associated bodies can the greatest efficiency be created in any industry.
12. Sanitary legislation should be modified so that it will not destroy the prestige obtained by the firm of long business experience and place them on a par with the irresponsible, would-be contractor.



## A WORTH-WHILE JOB

A pessimist and an optimist were discussing life from their different viewpoints. "I really believe," said the former, "that I could make a better world myself."

"Sure!" returned the optimist; "that's what we are here for. Now let us get to work and do it."

All things will come to the other fellow if you only sit down and wait. Many of the good things will be yours if you will look at life from behind a smile—and advertise.

## STEAM HEATING AND PLUMBING SPECIALTIES WILL NOT BE LOWER

Editor HARDWARE AND PLUMBING WORLD:

As far as the writer is able to judge, supply houses and jobbing houses, and small manufacturers, as well as large, are not likely to see any lower prices on steam heating or plumbing specialties for a long time to come, and very slight if any changes in prices other than upward on anything made of brass or steel, and the large jobbing houses and manufacturing concerns are down and out on stock. Our concern and our competitors report that they are manufacturing to order for customers' requirements and have been for many months.

The only way we can give any kind of service which is satisfactory to us and our customers, is to receive their specifications far in advance of their actual requirements, and we advise their carrying a reasonable stock of steam specialties on their shelves, or having some in transit to them.

Transportation interferences require that they place their requirements at least 30 days earlier than they would otherwise, and manufacturing conditions both in securing raw material and the necessary labor, makes it essential that we have our customers' specifications 60 days in advance of their needs. If our customers co-operate with us to this extent, the goods can be ready for shipment in most cases when specified.

Our capacity has been taxed to such an extent that many sections of the United States have not been covered by our salesmen or representatives in over a year.

Yours respectfully,

THE BEATON & CADWELL MFG. CO.,

New Britain, Conn. Wm. H. Cadwell, Pres.

## EFFICIENCY POINTERS FOR PLUMBERS

**Buying**

Efficiency in buying can only be attained by stocking one line of merchandise and refusing to stock the line of every Tom, Dick and Harry. The former will keep your stock fresh, clean and movable. The latter plan will invariably fill your shelves with slow moving goods, increase your overhead, decrease your credit and lower your standing with the jobber and manufacturer.

**Selling**

A Sioux Falls, S. D., master plumber has a photograph made of every job he does. These are bound and they lay on top of his desk at all times. Every visitor that comes to his desk invariably looks at the pictures. It is a silent salesman that is more convincing than words.

**Collecting**

The Master Plumbers of Brantford, Ont., find that the collection of small accounts has proved to be a bug-bear to their business. In order to prevent these small accounts from accumulating, the association hires a collector who makes such collections for all members. The plan has proven very successful.

---

If you try to perfect yourself through experience alone, you are taking the long way around. Dig into books and trade papers and gain by the experience of others.

## EXCELLENT SANITARY SYSTEM

The Sanatar Company of Indiana was incorporated on June 21st, at Indianapolis, Indiana, with a capital stock of $50,000.00, for the purpose of manufacturing Sanatar Sewage Disposal Tanks.

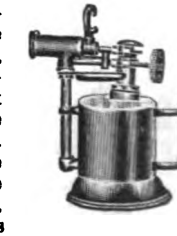
The Sanatar Sewage Disposal Tank is designed for use where sewers are not available. A novel feature of the Sanatar consists in the portability of the tank, as it can be built up so as to accommodate the smallest unit required necessary to take care of the sewage disposal of five people to the largest installation for a hotel, school house, etc.

The Sanatar tank is built upon lines approved by the United States Health Service and has received the special commendation and approval from the State Board of Health of Indiana and other states. It is built of reinforced concrete and is light in construction.

The company is operating a plant at Portland, Indiana, and will have another one in operation at West Palm Beach, Florida, in the near future.

The product will be sold through jobbers only.

## EFFICIENT GASOLINE TORCHES



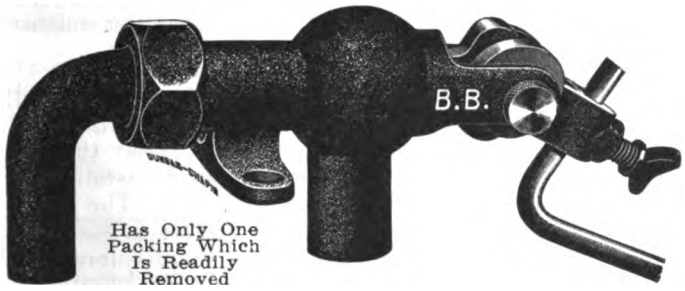
Although still used by some workmen who cling to old-fashioned things for old times' sake, the charcoal furnace for heating soldering irons, melting metal, etc., has practically gone out of existence. The plumber and electrical worker accomplish work in a fraction of the time with the modern gasoline torch.

One of the best of these devices on the market is the Turner Gasoline-Kerosene Torch, made by the Turner Brass Works, of Sycamore, Ill., and which embodies many important and highly practical improvements.

The double jet feature obtains the highest degree of heat that can be generated from gasoline and has been a factor in the large sale of these torches. Another important innovation has been the perfection of a torch that will burn either gasoline or kerosene, without changing the adjustment. This has been effected by increasing the generation. A baffle has been placed in the burner tube, filled with asbestos, on which the flame is constantly applied. Through a slot in the top of the burner tube the flame is forced on to the baffle, so that the fuel is transformed into a hot, dry gas. In this condition it takes up more air and with less fuel generates more heat.

There are no holes in the side of the burner tube, so that the wind, when the torch is used out of doors, cannot interfere with the burning of the gas and reduce the temperature of the flame. The new air pump has also undergone changes whereby its efficiency and durability have been greatly increased. The drip cup on the new torches is made of stamped metal, heavily copper plated, of sufficient size and much lighter than cast iron.

Many other valuable improvements have been introduced, in the construction of the burner especially, and the new line has been standardized so that dealers can carry a stock of repairs, all parts, including the double jets, being interchangeable. In the accompanying illustrations the types of Turner Gasoline-Kerosene Torches most in demand are shown, a folder issued by the manufacturers giving further details of their construction and operation will be furnished by them on request.



---

Misrepresentation of the goods may make sales today, but it loses customers tomorrow.

## KEEP YOUR BUSINESS WELL IN HAND

When will the break in the present markets occur? This question seems to be on every one's mind. Yet we fail to find one single individual who, when speaking from the heart, will acknowledge that prices will ever return to the pre-war stage.

We might go even farther and say that the persons are few and far between who honestly wish for a reduction in prices. As a matter of fact the present high price market, or high cost of living as it is commonly called, is not causing the public much worry. If it was there would be more agitation for a reduction.

The possibility of a falling market is the one and only thing that is really worrying the people of this country. It is the main subject at business meetings, at club gatherings, union meetings, and we even hear it discussed in church.

Others claim that prices will surely toboggan when labor becomes more efficient. Some say the break is due early in the fall. Others contend that production has caught up with the demand and the present railroad car shortage is the only thing that is holding prices up. Combinations and trusts are also frequently credited with holding up the present markets.

Then we hear from the statistician who has compiled data which proves that the break is not due until the fall of 1921, which marks the close of a seven year period of prosperity; while others have figures to prove that the present high prices will continue for five more years.

### Build Business—Start Today

Some one of these predictions will surely come true. Just which one, we are not in a position to say. In fact, we are reasonably certain that, after all, psychology will have much to do in bringing about a change in the present state of affairs. Just as long as the public continues to spend money like drunken sailors, prices will not come down. When they become more conservative and limit their purchases to bare necessities, something will surely happen.

We all dread the days of business depression, but they are coming just as certain as tomorrow's sun unless we fortify against them. To simply follow the regular routine of supplying demand is treading on dangerous ground. We must plan to build business and today is the time to start. "In time of prosperity prepare for adversity."

This can be effectively done in the plumbing and heating industry by keeping prospect cards from data secured in making repairs. The possibilities in the field of existing buildings are unlimited. It is simply a question of creating a desire and this desire will create a demand.

Statisticians tell us that there are approximately 23,500,000 homes in the United States. Of this number less than five million are equipped with plumbing and less than 2,300,000 have heating plants. Think of the possibilities. The future of the plumbing and heating industry is unlimited.

### Chance for 25 Per Cent Renewals

But think of the possibilities in old buildings now equipped with plumbing, exclusive of all other possibilities. It is safe to say that 25 per cent of the present plumbing installations in residences alone are antiquated. The plumbing in these homes is not up to the standard of the other facilities within the same homes, nor has as much money been invested in the plumbing and heating facilities as the owners have invested in musical instruments, automobiles, etc.

There is a reason for this and that reason is the lack, heretofore, of sales promotion work in this industry. The makers of automobiles, the various manufacturers of musical appliances and others have put unlimited effort into publicity and enthusiastic sales efforts during the past ten years. The results obtained are displayed at every hand.

Now comes the question: How can we obtain our just share of the annual expenditure of these home owners?

To our mind the Premise Report Card offers a most practical solution. The journeyman plumber repairman has access to the plumbing and heating facilities of every home in the United States at intervals through the year. During one of these visits, he can make a complete report of the plumbing and heating facilities on the Premise Report Card. With this information in possession of the plumbing and heating contractor, with a little effort on the part of his office organization, a great increase in sales will result.

### Extension Bureau's Plan

The Trade Extension Bureau of Evansville, Ind., offers to furnish the Premise Report Card to the plumbing and heating contractor at absolute cost. Every time a journeyman is sent on a jobbing order, he is handed one of these Premise Report Cards with instructions to fill it out and return it to the office.

When the report card is returned, the stenographer in the contractor's office cross indexes the information contained on the report card. As an example, if the Premise Report Card indicates that the bath tub is in bad condition, a card is made out with the owner's name, date, and street address written on it, and the information "bath tub in bad condition" inserted.

This card is then filed under an index containing bath tub prospects. The same thing would hold true if any other item was indicated on the Premise Report Card as in bad condition. If the Premise Report Card indicated that the home did not possess a vacuum cleaner, a card would be made out for this and filed as previously described for a bath tub.

Digitized by Google

The contractor would then forward letters to the prospect at regular intervals. In addition to this, he could supply his jobber and manufacturer with a list of his prospective customers and they in turn will send the prospect literature and circular letters that will assist the contractor in making the sale.

Now is the proper time to start a progressive campaign of this kind. By starting the campaign at once, it is safe to predict that a sufficient number of prospects would be tabulated to insure the contractor a good, live, bunch of profitable business during the winter months, when business is normally dull.

More than this, within a year, the list will grow to such proportions that ample business will be forthcoming from this source to warrant the contractor spending the greater part of his time developing this profitable and non-competitive field.

Here is the solution to the question that is worrying the average business man at present. This is one way of keeping business in a healthy condition, and is one way of stifling competition and making the business a bigger, better and more profitable line.

In conclusion, we want to emphasize that if there are any "Doubting Thomases" who question the possibilities of the Premise Report Card, we will gladly supply them with another list of contractors who have successfully operated the Premise Report Card for the past two years. We have many letters on file from men who were formerly large operators. They have now abandoned the contracting game entirely and are devoting their entire time "building business" from old buildings, for they found it more profitable in every way.

---

Too many superlatives in advertising or in salesmanship lead the public to discount all your statements. They know everything you sell cannot be the "Best."

---

A garden patch indicates thrift as well as any other kind of a patch.

**Increase Your Bank Balance**

Patented
No. 71 Quart Torch

by using the most economical, serviceable, and durable torches and furnaces on the market. With such tools your men can do quicker and better work in less time and at least expense to you. Just think it over carefully and you will surely acknowledge that our remarks are correct. The "Always Reliable" line is constructed so as to use the least amount of fuel per hour. It is substantially made by skilled workmen, therefore, each article is guaranteed. You cannot go wrong by adopting this line as your standard.

OTTO BERNZ CO., Newark, N. J.

## FINDING THE OVERHEAD

(By Fred J. Huntley)

John Nailor had conducted a hardware store for quite a long time in one of those southeastern Ohio towns. Whenever anybody in the place wanted something particularly good in the hardware line his first thought usually was "I'll get it over at John Nailor's." It was about the same out in the country districts where John was known far and wide for his dependable merchandise and fair dealings.

Although there were other hardware men in town John seemed to take the lead when it came to new ways of doing things. The same spirit was shown in his stock, the arrangement of his store, and almost everybody in town seemed to agree that John's success was due largely to the progressive way in which he tackled problems that came his way.

### Plumbing Part of Business

Like most other towns of its size, plumbing was considered a part of the hardware business, just the same as tinning, sheet metal work, etc. For some reason or other the plumbing end of the hardware business had never been as profitable as it should. No one seemed to be able to tell just why it was.

John Nailor went through the same experience as the others and when he had completed a job, as a rule, never seemed quite sure that he had made the charges that meant just the profit that was really due him. He knew that something was wrong somewhere and in spite of all he could do the answer seemed to be as far away as ever. He talked the matter over with other hardware men in town but no one seemed to be any better off than he.

Then John Nailor decided to call a meeting and the four or five hardware men got together one night. They had a little dinner and then they went after the plumbing problems.
